Kathryn Collie/ #14.2		Seek Amendment	Less restrictive recession plane rules to enable the increased density intended by the Government	
Kathryn Collie/ #14.8		Seek Amendment	Prioritise and make an early determination on the recession plane qualifying matter.	
Grant McGirr/ #21.5		Oppose	That no changes to rules lessen the amount of sunlight that any property (house and land) currently receives.	
Linda Barnes/ #23.6		Seek Amendment	Amend Sunlight Access Qualifying Matter so that sunlight can go lower in the winter months.	
John Hurley/ #24.1		Oppose	Opposes changes to recession plane / height in relation to boundary rules.	
Kelvin Lynn/ #45.3		Seek Amendment	Amend Rule 14.6.2.2 Height in relation to boundary in the High Density Residential Zone to provide for more sunlight in winter.	
Gavin Keats/ #52.1		Seek Amendment	Amend 14.6.2.2 to require high density six story housing does not rob neighbours on the Southside of winter sun.	
Gavin Keats/52.1	Anne Dingwall/ #FS2037.81	Seek Amendment	<p>Amend 14.6.2.2 to require high density six story housing does not rob neighbours on the Southside of winter sun.</p> <p>The changes proposed to the government's plan by the Christchurch City Council do not go far enough for the following reasons:</p> <ol style="list-style-type: none"> 1. no mention is made of not shading solar panels on a neighbour's roof. This form of distributed generation is going to be very important in future and it is unacceptable that householders can spend money on solar panels and then have their generating ability reduced by neighbours. 2. it needs to be specified that all height limits should include any chimneys, flues, HVAC units, FCUs etc. <p>I am pleased that CCC is trying really hard to improve things for Christchurch. As the rebuild progresses we have such a lovely liveable, walkable, and bikeable city, it is such a shame if government rules mean developers can push the council into approving poor housing design.</p>	Support
Tobias Meyer/ #55.3		Support	Supports provisions as notified.	
Tobias Meyer/55.3	Christchurch International Airport Limited/ #FS2052.166	Support	<p>Supports provisions as notified.</p> <p>I don't mind the adjusted limit for the south border, but leave the other sides. Otherwise development is severely affected. Allow north and east/west to be according to MDRS at least. Also perimeter blocks make more sense for good development so make the allowable envelope higher/remove for front of property: even if just for less of front 12m or 40% of property.</p>	Oppose

Victoria Neighbourhood Association (VNA) / #61.6		Seek Amendment	<p>Section 14.6.2.2 (a) refers to Appendix 14.15.2 Diagram D. In the absence of any site-specific S32 evaluation of impacts for this site, add a new Diagram E for the HRZ zone which matches the current Plan recession planes being current Appendix 14.16.2 Diagram C (varying from 35 to 50 to 55 degrees, commencing 2.3m above the site boundary). Reference this change in section 14.6.2.2.</p> <p>Section 14.6.2.2 (b). Delete all words from “unless” so that the clause reads: <i>“For any part of a building above 12m in height, the recession plane under a. shall apply.”</i></p> <p>Section 14.6.2.2 (c). Change subclause iv to read: <i>“the construction of three or more residential units of a maximum of 14 metres in height, to any part of a building;</i> <i>A. On a northern site boundary as defined by Diagram D, and</i> <i>B. On any other site boundary where the directly neighbouring building is already constructed to the full extent allowed by this section 14.6.2.2 (c), and</i> <i>C. Along the first 20 metres of a side boundary measured from the road boundary; or</i> <i>D. Within 60% of the site depth, measured from the road boundary, whichever is the lesser. For corner sites, depth is measured from the internal boundaries, that are perpendicular to the road boundary. See Figure 1, below.”</i></p>	
Victoria Neighbourhood Association (VNA) /61.6	Clare Dale/ #FS2029.18	Seek Amendment	<p>Section 14.6.2.2 (a) refers to Appendix 14.15.2 Diagram D. In the absence of any site-specific S32 evaluation of impacts for this site, add a new Diagram E for the HRZ zone which matches the current Plan recession planes being current Appendix 14.16.2 Diagram C (varying from 35 to 50 to 55 degrees, commencing 2.3m above the site boundary). Change subclause iv to read: <i>“the construction of three or more residential units of a maximum of 14 metres in height, to any part of a building;</i> <i>A. On a northern site boundary as defined by Diagram D, and</i> <i>B. On any other site boundary where the directly neighbouring building is already constructed to the full extent allowed by this section 14.6.2.2 (c), and</i> <i>C. Along the first 20 metres of a side boundary measured from the road boundary; or</i> <i>D. Within 60% of the site depth, measured from the road boundary, whichever is the lesser. For corner sites, depth is measured from the internal boundaries, that are perpendicular to the road boundary. See Figure 1, below.”</i></p> <p>Our preference remains to maintain the current Plan’s lower recession plane requirements(current Appendix 14.16.2 Diagram C), given that many recently-constructed homes, post-earthquakes, in the HRZ area and elsewhere have been constructed based on the level of shading resulting from those setbacks. The effects on those new homes would be compromised for a very long time by even the revised recession planes. We have yet to see any evaluation within the section 32 report assessing those adverse effects relative to the current Plan.</p> <p>In subsection (a), recession planes are defined by Appendix 14.16.2 Diagram D from points 3m above boundary ground levels. Refer to our comments 2.2 under Issue 2, which apply to this issue also. Whilst we accept that what is proposed in PC14 is a compromise, we have yet to see a detailed evaluation of the proposed change relative to current planning requirements.</p>	Oppose

			<p>In subsection (b), recession planes would not apply where buildings are set back to the extent specified. We can see no reason why the recession plane rules should not apply to taller buildings which, even when setback back, would result in dramatically increased shading of neighbours. We have yet to see a detailed evaluation of the proposed change relative to current planning requirements.</p> <p>In subsection (c), this standard does not apply to the construction of 3 or more residential units along the first 20 metres of a side boundary measured from the road boundary, or 60% of the site depth, whichever is lesser. This could have a very significant adverse impact on neighbourhoods, for which we have not seen any comprehensive evaluation of effects.</p> <p>Our concern is that this exemption applied to one site could have enormous detrimental and threatening impact on direct neighbours, causing a domino effect of forcing neighbours from their property. A much more collaborative approach, which we would support, would be to allow such concessions on northern property boundaries only, or boundaries adjoining properties constructed to subsection (c) (see Appendix 14.15.2 diagram D), which would encourage the outcomes sought over time without intimidating current residents. We have yet to see a detailed evaluation of the proposed change relative to current planning requirements.</p> <p>Sunlight Access Qualifying Matter</p> <p>Generation Zero has asked that I oppose the Sunlight Access Qualifying Matter. I do not oppose this QM, and do strongly support it. The reason for supporting it is nothing to do with supporting existing property values, and everything to do with keeping housing more affordable, and helping to protect the physical and mental health of all residents, and of our environment. Sunlight is essential to these matters. I am disappointed that Generation Zero have not engaged with residents who submitted to CCC on this matter, and are making and publishing incorrect assumptions about the motivations of those residents. As I have been unable to correct the standard form, I have not ticked those sections I disagree with, and make my comments here</p>

Victoria Neighbourhood Association (VNA) / #61.9		Seek Amendment	Amend 14.6.2.2 by requiring that Sunlight Access Qualifying Matter applies as an upper limit of shading for developments.	
Victoria Neighbourhood Association (VNA) /61.9	Clare Dale/ #FS2029.19	Seek Amendment	<p>Amend 14.6.2.2 by requiring that Sunlight Access Qualifying Matter applies as an upper limit of shading for developments.</p> <p>We strongly support the application of a Sunlight Access Qualifying Matter to the MRZ and HRZ zones of Christchurch, for the reasons CCC have identified in the S77 evaluation within the Section 32 Evaluation Report, particularly identifying changes that are beneficial to the environment, energy efficiency, health, and affordability.</p> <p>We note the high level of over-enabling of intensification under PC14. Therefore, we see this as a win-win-win scenario which both reduces the over-enablement, still provides much more intensification than is needed to meet demand projections, and improves the quality and affordability of the outcome.</p> <p>Where identified elsewhere, we challenge the writers of PC14 to consider the shading defined by the proposal in this QM as an upper limit, seeking opportunities to enable the advantages of even more sunlight access provided the capacity for intensification still remains sufficiently within the demand. This approach will maximise the positive impacts of PC14.</p> <p>Regarding exemptions:</p> <p>Section 32 Appendix 34 Sunlight Qualifying Matter also states that the average road frontage in HRZ is 19.8m, whilst this may be true as an average it doesn't reflect the actual reality of many central city sites. In the VNA area, many sections are less than 10m wide. The access to direct sunlight to heat homes and encourage efficient, sustainable energy sources will be significantly compromised if a one size fits all approach is taken to enable build heights in central city areas like the VNA which has a high volume of narrow sections that run north to south. Size of section, aspect, street width, recession plains need to be considered in HRZ such as the streets covered by the VNA to ensure good urban planning and the economic, social, and environment benefits of further densification. Adding across the board higher density by enabling 4 storeys in already high density without considering each site on its own merits makes no sense.</p>	Oppose

Victoria Neighbourhood Association (VNA) / #61.41		Seek Amendment	<p>Amend Section 14.6.2.2 (c), subclause iv by including the following sentences: "the construction of three or more residential units of a maximum of 14 metres in height, to any part of a building;</p> <p>A. On a northern site boundary as defined by Diagram D;</p> <p>B. On any other site boundary where the directly neighbouring building is already constructed to the full extent allowed by this section 14.6.2.2 (c); and</p> <p>A-C. Along the first 20 metres of a side boundary measured from the road boundary; or</p> <p>B-D. Within 60% of the site depth, measured from the road boundary, whichever is the lesser. For corner sites, depth is measured from the internal boundaries, that are perpendicular to the road boundary. See Figure 1, below."</p>	
Victoria Neighbourhood Association (VNA) /61.41	Clare Dale/ #FS2029.22	Seek Amendment	<p>Amend Section 14.6.2.2 (c), subclause iv by including the following sentences: "the construction of three or more residential units of a maximum of 14 metres in height, to any part of a building;</p> <p>A. On a northern site boundary as defined by Diagram D;</p> <p>B. On any other site boundary where the directly neighbouring building is already constructed to the full extent allowed by this section 14.6.2.2 (c); and</p> <p>A-C. Along the first 20 metres of a side boundary measured from the road boundary; or</p> <p>B-D. Within 60% of the site depth, measured from the road boundary, whichever is the lesser. For corner sites, depth is measured from the internal boundaries, that are perpendicular to the road boundary. See Figure 1, below."</p> <p>Section 14.6.2.2 (c). Change subclause iv to read: " the construction of three or more residential units of a maximum of 14 metres in height, to any part of a building;</p> <p>A. On a northern site boundary as defined by Diagram D,</p>	Oppose

B. On any other site boundary where the directly neighbouring building is already constructed to the full extent allowed by this section 14.6.2.2 (c), and

C. Along the first 20 metres of a side boundary measured from the road boundary; or

D. Within 60% of the site depth, measured from the road boundary, whichever is the lesser. For corner sites, depth is measured from the internal boundaries, that are perpendicular to the road boundary. See Figure 1, below.”

Our preference remains to maintain the current Plan’s lower recession plane requirements (current Appendix 14.16.2 Diagram C), given that many recently-constructed homes, post-earthquakes, in the HRZ area and elsewhere have been constructed based on the level of shading resulting from those setbacks. The effects on those new homes would be compromised for a very long time by even the revised recession planes. We have yet to see any evaluation within the section 32 report assessing those adverse effects relative to the current Plan.

In subsection (a), recession planes are defined by Appendix 14.16.2 Diagram D from points 3m above boundary ground levels. Refer to our comments 2.2 under Issue 2, which apply to this issue also. Whilst we accept that what is proposed in PC14 is a compromise, we have yet to see a detailed evaluation of the proposed change relative to current planning requirements.

In subsection (b), recession planes would not apply where buildings are set back to the extent specified. We can see no reason why the recession plane rules should not apply to taller buildings which, even when setback back, would result in dramatically increased shading of neighbours. We have yet to see a detailed evaluation of the proposed change relative to current planning requirements.

In subsection (c), this standard does not apply to the construction of 3 or more residential units along the first 20 metres of a side boundary measured from the road boundary, or 60% of the site depth, whichever is lesser. This could have a very significant adverse impact on neighbourhoods, for which we have not seen any comprehensive evaluation of effects.

Our concern is that this exemption applied to one site could have enormous detrimental and threatening impact on direct neighbours, causing a domino effect of forcing neighbours from their property. A much more collaborative approach, which we would support, would be to allow such concessions on northern property boundaries only, or boundaries adjoining properties constructed to subsection (c) (see Appendix 14.15.2 diagram D), which would encourage the outcomes sought over time without intimidating current residents. We have yet to see a detailed evaluation of the proposed change relative to current planning requirements.

Sunlight Access Qualifying Matter

Generation Zero has asked that I oppose the Sunlight Access Qualifying Matter. I do not oppose this QM, and do strongly support it. The reason for supporting it is nothing to do with supporting existing property values, and everything to do with keeping housing more affordable, and helping to protect the physical and mental health of all residents, and of our environment. Sunlight is essential to these matters.

I am disappointed that Generation Zero have not engage with residents who submitted to CCC on this matter, and are making and publishing incorrect assumptions about the motivations of those residents.

As I have been unable to correct the standard form, I have not ticked those sections I disagree with, and make my comments here

Amend Section 14.6.2.2 (c), subclause iv by including the following sentences: "the construction of three or more residential units of a maximum of 14 metres in height, to any part of a building;

A. On a northern site boundary as defined by Diagram D;

B. On any other site boundary where the directly neighbouring building is already constructed to the full extent allowed by this section 14.6.2.2 (c); and

A-C. Along the first 20 metres of a side boundary measured from the road boundary; or

B-D. Within 60% of the site depth, measured from the road boundary, whichever is the lesser. For corner sites, depth is measured from the internal boundaries, that are perpendicular to the road boundary. See Figure 1, below.”

Section 14.6.2.2 (c). Change subclause iv to read: “ the construction of three or more residential units of a maximum of 14 metres in height, to any part of a building;

			<p>A. On a northern site boundary as defined by Diagram D,</p> <p>B. On any other site boundary where the directly neighbouring building is already constructed to the full extent allowed by this section 14.6.2.2 (c), and</p> <p>C. Along the first 20 metres of a side boundary measured from the road boundary; or</p> <p>D. Within 60% of the site depth, measured from the road boundary, whichever is the lesser. For corner sites, depth is measured from the internal boundaries, that are perpendicular to the road boundary. See Figure 1, below.”</p> <p>Our preference remains to maintain the current Plan’s lower recession plane requirements (current Appendix 14.16.2 Diagram C), given that many recently-constructed homes, post-earthquakes, in the HRZ area and elsewhere have been constructed based on the level of shading resulting from those setbacks. The effects on those new homes would be compromised for a very long time by even the revised recession planes. We have yet to see any evaluation within the section 32 report assessing those adverse effects relative to the current Plan.</p> <p>In subsection (a), recession planes are defined by Appendix 14.16.2 Diagram D from points 3m above boundary ground levels. Refer to our comments 2.2 under Issue 2, which apply to this issue also. Whilst we accept that what is proposed in PC14 is a compromise, we have yet to see a detailed evaluation of the proposed change relative to current planning requirements.</p> <p>In subsection (b), recession planes would not apply where buildings are set back to the extent specified. We can see no reason why the recession plane rules should not apply to taller buildings which, even when setback back, would result in dramatically increased shading of neighbours. We have yet to see a detailed evaluation of the proposed change relative to current planning requirements.</p> <p>In subsection (c), this standard does not apply to the construction of 3 or more residential units along the first 20 metres of a side boundary measured from the road boundary, or 60% of the site depth, whichever is lesser. This could have a very significant adverse impact on neighbourhoods, for which we have not seen any comprehensive evaluation of effects.</p> <p>Our concern is that this exemption applied to one site could have enormous detrimental and threatening impact on direct neighbours, causing a domino effect of forcing neighbours from their property. A much more collaborative approach, which we would support, would be to allow such concessions on northern property boundaries only, or boundaries adjoining properties constructed to subsection (c) (see Appendix 14.15.2 diagram D), which would encourage the outcomes sought over time without intimidating current residents. We have yet to see a detailed evaluation of the proposed change relative to current planning requirements.</p> <p>Sunlight Access Qualifying Matter</p> <p>Generation Zero has asked that I oppose the Sunlight Access Qualifying Matter. I do not oppose this QM, and do strongly support it. The reason for supporting it is nothing to do with supporting existing property values, and everything to do with keeping housing more affordable, and helping to protect the physical and mental health of all residents, and of our environment. Sunlight is essential to these matters.</p> <p>I am disappointed that Generation Zero have not engage with residents who submitted to CCC on this matter, and are making and publishing incorrect assumptions about the motivations of those residents.</p> <p>As I have been unable to correct the standard form, I have not ticked those sections I disagree with, and make my comments here</p>	
Victoria Neighbourhood Association (VNA) /61.41	Cambridge 137 Limited/ #FS2042.25	Seek Amendment	<p>Amend Section 14.6.2.2 (c), subclause iv by including the following sentences: "the construction of three or more residential units of a maximum of 14 metres in height, to any part of a building;</p> <p>A. On a northern site boundary as defined by Diagram D;</p> <p>B. On any other site boundary where the directly neighbouring building is already constructed to the full extent allowed by this section 14.6.2.2 (c),; and</p> <p>A-C. Along the first 20 metres of a side boundary measured from the road boundary; or</p> <p>B-D. Within 60% of the site depth, measured from the road boundary, whichever is the lesser. For corner sites, depth is measured from the internal boundaries, that are perpendicular to the road boundary. See Figure 1, below.”</p>	Oppose

Section 14.6.2.2 (c). Change subclause iv to read: “ the construction of three or more residential units of a maximum of 14 metres in height, to any part of a building;

A. On a northern site boundary as defined by Diagram D,

B. On any other site boundary where the directly neighbouring building is already constructed to the full extent allowed by this section 14.6.2.2 (c), and

C. Along the first 20 metres of a side boundary measured from the road boundary; or

D. Within 60% of the site depth, measured from the road boundary, whichever is the lesser. For corner sites, depth is measured from the internal boundaries, that are perpendicular to the road boundary. See Figure 1, below.”

Our preference remains to maintain the current Plan’s lower recession plane requirements (current Appendix 14.16.2 Diagram C), given that many recently-constructed homes, post-earthquakes, in the HRZ area and elsewhere have been constructed based on the level of shading resulting from those setbacks. The effects on those new homes would be compromised for a very long time by even the revised recession planes. We have yet to see any evaluation within the section 32 report assessing those adverse effects relative to the current Plan.

In subsection (a), recession planes are defined by Appendix 14.16.2 Diagram D from points 3m above boundary ground levels. Refer to our comments 2.2 under Issue 2, which apply to this issue also. Whilst we accept that what is proposed in PC14 is a compromise, we have yet to see a detailed evaluation of the proposed change relative to current planning requirements.

In subsection (b), recession planes would not apply where buildings are set back to the extent specified. We can see no reason why the recession plane rules should not apply to taller buildings which, even when setback back, would result in dramatically increased shading of neighbours. We have yet to see a detailed evaluation of the proposed change relative to current planning requirements.

In subsection (c), this standard does not apply to the construction of 3 or more residential units along the first 20 metres of a side boundary measured from the road boundary, or 60% of the site depth, whichever is lesser. This could have a very significant adverse impact on neighbourhoods, for which we have not seen any comprehensive evaluation of effects.

Our concern is that this exemption applied to one site could have enormous detrimental and threatening impact on direct neighbours, causing a domino effect of forcing neighbours from their property. A much more collaborative approach, which we would support, would be to allow such concessions on northern property boundaries only, or boundaries adjoining properties constructed to subsection (c) (see Appendix 14.15.2 diagram D), which would encourage the outcomes sought over time without intimidating current residents. We have yet to see a detailed evaluation of the proposed change relative to current planning requirements.

Sunlight Access Qualifying Matter

Generation Zero has asked that I oppose the Sunlight Access Qualifying Matter. I do not oppose this QM, and do strongly support it. The reason for supporting it is nothing to do with supporting existing property values, and everything to do with keeping housing more affordable, and helping to protect the physical and mental health of all residents, and of our environment. Sunlight is essential to these matters.

I am disappointed that Generation Zero have not engage with residents who submitted to CCC on this matter, and are making and publishing incorrect assumptions about the motivations of those residents.

As I have been unable to correct the standard form, I have not ticked those sections I disagree with, and make my comments here

Amend Section 14.6.2.2 (c), subclause iv by including the following sentences: "the construction of three or more residential units of a maximum of 14 metres in height, to any part of a building;

A. On a northern site boundary as defined by Diagram D;

B. On any other site boundary where the directly neighbouring building is already constructed to the full extent allowed by this section 14.6.2.2 (c); and

A-C. Along the first 20 metres of a side boundary measured from the road boundary; or

			<p>B-D. Within 60% of the site depth, measured from the road boundary, whichever is the lesser. For corner sites, depth is measured from the internal boundaries, that are perpendicular to the road boundary. See Figure 1, below.”</p> <p>Section 14.6.2.2 (c). Victoria Neighbourhood Association (VNA) / #61.53		Oppose	Retain recession planes as set out in the operative District Plan.	

Victoria Neighbourhood Association (VNA) /61.53	Clare Dale/ #FS2029.23	Oppose	<p>Retain recession planes as set out in the operative District Plan.</p> <p>The current central city residential area in Christchurch consists of old streets and old sites(originally for small workers cottages), many residential sites in within the 4 Avenues are therefore very small (often less than 300 sq m). It is inappropriate to enable 4-6 storey high buildings in areas without ruining the economic, social and cultural aspects of the existing community including loss of sunlight, privacy, noise pollution, inability to efficiently use passive heating, inability to grow own fruit and vegetables parking congestion, loss of value in their property and negative impacts on mental wellbeing to name some of the obvious costs.</p> <p>These are all costs that will be borne by both the existing and future residential communities living in current central city residential zones. It seems not equal consideration to all peoples' social and cultural needs are being treated with equal consideration in PC14, as it favours the needs of a selected future resident in a new building that may never come, and whose who now and in future occupy existing homes and whose needs could be quite different to what is being enabled.</p> <ul style="list-style-type: none"> • There is plenty of opportunity to enable new HRZ housing within the CHC central city without only focusing on going higher and intensifying even more in the existing residential areas. <p>For example: the VNA neighbourhood currently has a density of 150 households per hectare and with an average section size of 400-300m sq. There exists at least 7 hectares of land on the south side of the city that has zero households per hectare and which is zoned for mixed use. This land could be enabled for HRZ if the CCC were to think more strategically about how to actively encourage more housing the in central city AND meet the needs of the demand without over enabling, thereby also meeting the needs of the existing community AND have an excellent outcome in urban planning. The development of the South Frame in the CCRP has not moved forward in any way to make the South side of the city an attractive place to live, work and play all within 500m of the CBD.</p> <ul style="list-style-type: none"> • There could easily be over 2,000 households enabled within this CCRP central city area if development for residential were to be actively encouraged by rezoning, or offering incentives, and actively discourage further density development in existing central city residential already densely developed. By doing this CCC would be proactively and meaningfully participating in the role of urban planning and signalling that the south side is where they want development. Without Council actively managing this opportunity for residential development as they did for the East frame, Developers will continue to do small infill developments based on yield alone, which will not deliver the right outcomes for the city and its residents in relation to urban planning. Refer to Figures 2 & 3 which clearly show that the CHC central city is very clearly unbalanced with all the residential on one side (north) and all the services on the opposite side (south). You can't shift the amenity, but you can develop houses, which is what the Gov't is asking for. 	Oppose
Victoria Neighbourhood Association (VNA) /61.53	Anne Dingwall/ #FS2037.124	Oppose	<p>Retain recession planes as set out in the operative District Plan.</p> <p>The current central city residential area in Christchurch consists of old streets and old sites(originally for small workers cottages), many residential sites in within the 4 Avenues are therefore very small (often less than 300 sq m). Kathleen Crisley/ #63.89		Support	Retain provisions in relation to recession planes in final plan decision.	
Kathleen Crisley/ #63.90		Seek Amendment	Seek clarification of effects on neighbouring sites arising from compliance with 14.6.2.2(b)	
Kathleen Crisley/63.90	Stantec/ #FS2032.23	Seek Amendment	Seek clarification of effects on neighbouring sites arising from compliance with 14.6.2.2(b) Primarily because I can't find any calculations to show what impact a building that is say 14 metres tall with therequired setbacks would have on a neighbouring property's access to sunlight.	Support
Rachel Davies/ #67.2		Support	Retain and increase the Sunlight Access qualifying matter.	
Rachel Davies/ #67.11		Seek Amendment	Rigid controls should be in place for access to sunlight and privacy along with how much land coverage dwellings can take up on a plot of land	
Paul Wing/ #70.5		Seek Amendment	Seek amendment to ensure recession planes protect existing residential properties from negative impact of new multi-storey builds.	
Rosemary Neave/ #72.7		Oppose	Remove the Sunlight Access Qualifying Matter from the proposed District Plan.	
Rosemary Neave/72.7	Anne Dingwall/ #FS2037.152	Oppose	Remove the Sunlight Access Qualifying Matter from the proposed District Plan. There are many cities in the world that have high density and are further from the equator than Christchurch. Cities such as Vienna, Copenhagen, Toronto, Geneva, and Calgary are consistently ranked some of the most livable cities in the world. This qualifying matter would reduce the maximum height and size of medium residential buildings below what is legally required and would create a less efficient usage of land and limit future housing. This qualifying matter has been developed with the expressed purpose of protecting and increasing property values rather than increasing the amount of affordable housing for people.	Oppose
Andrew Evans/ #89.14		Support	Support provisions as notified.	
Mary Clay/ #100.4		Seek Amendment	Proposed recession planes have the potential to result in poor outcomes that affects access to sunlight and privacy.	
Damian Blogg/ #103.4		Seek Amendment	[Lower recession planes]	
Ann Clay/ #104.4		Seek Amendment	[Lower recession planes]	
Kaye Thomson/ #109.1		Oppose	Oppose more permissive height in relation to boundary rule for Paparoa Street residential properties.	
Nikki Smetham/ #112.8		Support	[Retain Sunlight Access Qualifying Matter]	
Tracey Strack/ #119.6		Seek Amendment	<ul style="list-style-type: none"> • That sunlight access be better protected by further amending the medium/high density southern boundary recession plane to 45° from 3m at the boundary: and, • That neighbours along the southern boundaries of any proposed developments that involve non-compliances with height or access to sunlight rules can be notified of the required resource consents and to make submissions. 	
Cameron Matthews/ #121.5		Oppose	Opposes the sunlight access qualifying matter.	
Cameron Matthews/121.5	Ivan Thomson/ #FS2047.6	Oppose	<p>Opposes the sunlight access qualifying matter.</p> <p>Requests removal of the Sunlight Access Qualifying Matter.</p> <p>The proposed QM is designed to undermine the goals of NPS-UD and MDRS regarding housing density, availability, and affordability, it lacks site-specific identification or analysis, is likely to be ineffective at achieving its ostensible goal of achieving weather-parity between Christchurch and Auckland, is not strategic in the medium or long term, and has an unspecified but highly negative impact on housing density and capacity. The proposed Sunlight Access Qualifying Matter should therefore be removed from the plan.</p>	Oppose

			<p>The proposal has a high impact, which is obfuscated by CCC's impact assessment only including the effect on RS zones transitioning to MRZ. They assert 3 that within that group, 96% of the floorspace that would be enabled by MDRS would be achieved with their proposed QM. However, this gives no consideration to the impact on plan-enabled or feasible housing capacity in the extensive areas of the city operatively zoned RMD which will change to MRZ, nor the areas zoned for HRZ around key activity centres. This limitation selectively excludes potentially smaller, more centrally located sites (existing RMD-zone) which are likely at higher demand than the more peripheral RS-zoned sites. Those smaller RMD sites are more negatively impacted by CCC's proposed recession planes than larger ones, as the increased setbacks and lowered recession planes intersect to cause the feasible building height limit to not necessarily reach the full 12m required by MDRS. If these much more extensive zones (all of MRZ and HRZ) were included in the impact assessment, it would likely show a much greater reduction in the number of allowable and feasible homes. As the true impact of the proposed QM is not known to the public and is likely to be high (given the vast scale on which it's proposed to be applied), the Sunlight Access Qualifying Matter should be removed from the proposal.</p> <p>The arguments that CCC put forward in favour of the proposed QM are deficient. In broader context, the implication that national laws should be applied to Auckland, Hamilton, Tauranga, and Wellington as written, but Christchurch – the country's second largest city – with a post-hoc 'calibration' factor is absurd. The rules around NPS-UD and MDRS were clearly considered to apply nation-wide, with enabling legislation passed with supermajorities in parliament backed by all Canterbury and Christchurch MPs, and Christchurch even being mentioned explicitly in the third reading of the MDRS bill 4. The proposal – embarrassingly – treats Christchurch as though it were some forgettable, large-rural-town rather than the forward-looking, community focussed, youthful and diverse city that I think of it as, and seeks special status as such, which if implemented would – in my opinion – not be lawful, and therefore the Sunlight Access Qualifying Matter should be removed from the proposal.</p> <p>Additionally, CCC's premise that differences in outcomes between centres having implemented MDRS and NPS-UD can be calibrated-out by simply accounting for the differences in the angle of the sun's zenith on the winter solstice is simplistic and erroneous. Differences in outcomes in indoor and outdoor temperatures and irradiance between centres will be due to myriad of social, geographical, meteorological, and economic factors, not to mention site-specific factors like grade/slope, vegetation, nearby topographical features, to name a few, not just latitude. These site-specific analyses and evidence are required by the MDRS and NPS-UD rules for Qualifying Matters yet have not been assessed for this proposal. CCC's attempt to neutralise those intrinsic differences between centres – by only altering recession planes, such that they create an un-due restriction on density – will therefore be ineffective at 'managing the specific features' (as per NPS-UD), and therefore the Sunlight Access Qualifying Matter should be removed from the proposal.</p>	
Cameron Matthews/121.5	Christchurch International Airport Limited/ #FS2052.195	Oppose	<p>Opposes the sunlight access qualifying matter.</p> <p>Requests removal of the Sunlight Access Qualifying Matter.</p> <p>The proposed QM is designed to undermine the goals of NPS-UD and MDRS regarding housing density, availability, and affordability, it lacks site-specific identification or analysis, is likely to be ineffective at achieving its ostensible goal of achieving weather-parity between Christchurch and Auckland, is not strategic in the medium or long term, and has an unspecified but highly negative impact on housing density and capacity. The proposed Sunlight Access Qualifying Matter should therefore be removed from the plan.</p> <p>The proposal has a high impact, which is obfuscated by CCC's impact assessment only including the effect on RS zones transitioning to MRZ. They assert 3 that within that group, 96% of the floorspace that would be enabled by MDRS would be achieved with their proposed QM. However, this gives no consideration to the impact on plan-enabled or feasible housing capacity in the extensive areas of the city operatively zoned RMD which will change to MRZ, nor the areas zoned for HRZ around key activity centres. This limitation selectively excludes potentially smaller, more centrally located sites (existing RMD-zone) which are likely at higher demand than the more peripheral RS-zoned sites. Those smaller RMD sites are more negatively impacted by CCC's proposed recession planes than larger ones, as the increased setbacks and lowered recession planes intersect to cause the feasible building height limit to not necessarily reach the full 12m required by MDRS. If these much more extensive zones (all of MRZ and HRZ) were included in the impact assessment, it would likely show a much greater reduction in the number of allowable and feasible homes. As the true impact of the proposed QM is not known to the public and is likely to be high (given the vast scale on which it's proposed to be applied), the Sunlight Access Qualifying Matter should be removed from the proposal.</p> <p>The arguments that CCC put forward in favour of the proposed QM are deficient. In broader context, the implication that national laws should be applied to Auckland, Hamilton, Tauranga, and Wellington as written, but Christchurch – the country's second largest city – with a post-hoc 'calibration' factor is absurd. The rules around NPS-UD and MDRS were clearly considered to apply nation-wide, with enabling legislation passed with supermajorities in parliament backed by all Canterbury and Christchurch MPs, and Christchurch even being mentioned explicitly in the third reading of</p>	Oppose

			<p>the MDRS bill 4. The proposal – embarrassingly – treats Christchurch as though it were some forgettable, large-rural-town rather than the forward-looking, community focussed, youthful and diverse city that I think of it as, and seeks special status as such, which if implemented would – in my opinion – not be lawful, and therefore the Sunlight Access Qualifying Matter should be removed from the proposal.</p> <p>Additionally, CCC’s premise that differences in outcomes between centres having implemented MDRS and NPS-UD can be calibrated-out by simply accounting for the differences in the angle of the sun’s zenith on the winter solstice is simplistic and erroneous. Differences in outcomes in indoor and outdoor temperatures and irradiance between centres will be due to myriad of social, geographical, meteorological, and economic factors, not to mention site-specific factors like grade/slope, vegetation, nearby topographical features, to name a few, not just latitude. These site-specific analyses and evidence are required by the MDRS and NPS-UD rules for Qualifying Matters yet have not been assessed for this proposal. Cameron Matthews/ #121.22		Seek Amendment	Increase the maximum permitted height within the Height in Relation to Boundary exemption in the High Density Residential Zone to 18-21m for the front 20m of a site, for 6-storey enablement in the High Density Residential Zone. Consider retaining 14m permitted height limit for rest of site.	
Cameron Matthews/121.22	Christchurch International Airport Limited/ #FS2052.212	Seek Amendment	<p>Increase the maximum permitted height within the Height in Relation to Boundary exemption in the High Density Residential Zone to 18-21m for the front 20m of a site, for 6-storey enablement in the High Density Residential Zone. Consider retaining 14m permitted height limit for rest of site.</p> <p>SEE IMAGES WITHIN SUBMISSION</p> <p>This ensures 6-10m separation between upper-level units in adjacent HRZ buildings is maintained, and that floor width of upper-storeys remain feasible (at 5-9m for site widths of 15-20m). This incentivises development at the front of those sites, and to boost viability of medium density on older, narrow sites. One simple alternative ruleset which might help to achieve this, and which aligns well with the alternative HRZ built form standards above is to:</p> <ul style="list-style-type: none"> • change side/rear height-in-relation-to-boundary rules such that they are MDRS-compliant, i.e., 4m+60°, and, • waive HIRTB recession plane for parts of building in front 20m of a site (optionally for the rest of the site also) which are setback by more than around 3-5m from side/rear boundaries, and, 	Oppose

			<ul style="list-style-type: none"> • retain current height limits for 11+1m nominal, or 14m if LCIP applies, and, • Increase number of permitted units to 4, potentially only if LCIP applies. <p>In High Density Residential (HRZ) zones, nominally 14m height, the building envelope is extremely constrained above 12m, via a combination of recession planes, deep boundary setbacks, and restrictive height limits and building separation rules. This will severely limit the feasibility of many developments within the HRZ zone to achieve the scale nominally permitted by the zone.</p> <p>One mitigating factor is that at the front of sites, below 12m, exemptions for the recession plane, boundary setbacks, and building separation rules are made. While this is good, it is likely to create built forms which could otherwise be enabled under MRZ, if the same front-of-site recession/setback exemptions were to apply. These exemptions to recession planes and setback rules at the front of sites for MRZ were present in earlier versions of the proposed plan and should be re-incorporated.</p> <p>Regarding HRZ, the current proposal requires parts of buildings exceeding 12m height (3-4 storeys) to have 6-8m setbacks from side boundaries, be no higher than 14m (still only ~4 storeys unless low stud heights are used), be no closer than 10m from an a nearby unit, and if built at the rear of sites be confined to only 12m height and aggressive recession planes. CCC's data (Figure 25) shows average road frontage for HRZ land parcels is only ~20m, roughly translating into the site width (though likely inflated by corner sites). Older sites (pre-1970, i.e. the ones located predominantly around historically relevant town centres, like the city centre, Riccarton, Papanui, etc) are noted as being predominantly only 15m wide.</p> <p>Illustrating what the building envelope might look like under these rules, in Figure 26 the top floor is only (maximally, with low floor-separations) the 5th, and it's only maximally 6m wide. Considering that building above 3 storeys requires large fixed-cost investments into additional infrastructure (e.g. elevators, high fire resistance and/or sprinklers, fire engineering, wind report, etc), the limited saleable/rentable floor area from the combined 4th and 5th floors is likely to reduce actual built volume to only 3 storeys; i.e. only the nominal built height of MRZ sites. The building envelope on the right-hand-side shows the more egregious example, using a typical site from pre-1970's suburbs with a width of only 15m. Such a construction envelope completely rules out a 5th floor, further compromising the viability of building anything above 3-storeys in the HRZ zones.</p> <p>Importantly the site widths used for these illustrations show that even the average HRZ site is compromised for development above 3-4 storeys under the proposed rules. That could mean (depending on the statistical distribution of site widths) that around half of all sites zoned HRZ have even less feasible development prospects at heights exceeding 3 storeys. This is problematic in that in feasibly enabling only buildings of similar scale to MRZ – it provides very little incentive/allowances for development at increased scales/intensity in the areas most suited to it, i.e. those zoned for HRZ.</p> <p>In addition to the lack of development incentives exceeding 3 storeys, a low density-differential exists between the buildable envelope – even if built to their theoretical maximum limit – of both:</p> <ul style="list-style-type: none"> • · An HRZ site built up at the road frontage vs built up along the side or rear boundary • · An HRZ site vs an MRZ site. <p>The laudable goal of the proposed road-frontage recession-plane waiver for the front 20m / 60% is to encourage development at the front of sites, to help create a vibrant and active streetscape, to help manage overlooking between adjacent sites (without limiting density below legal minimum standards) and to improve privacy for residents, while boosting safety via 'many-eyes' on the street. However, as proposed it only provides a small bonus in habitable floorspace compared to developing the side or rear of the site. Considering that any provision of on-site car-parking or manoeuvring space provided will come at a cost to habitable area for a front-built site, but not for a side or rear-built site, the proposed waiver may not be sufficient to incentivise development at the road frontage.</p> <p>In addition – while I would argue that subjective aesthetic ideals should not be included in our strategy objectives (see section: INAPPROPRIATE AND SUBJECTIVE STRATEGY OBJECTIVES) – if CCC is aiming to have "legible urban form" with "contrasting building clusters", "appropriate scale, form", and to manage the "clustering, scale and massing" (Chapter 3 Strategic Directions 3.3.7 Objective –Well-functioning urban environment) of our more densely populated centres, then allowing built forms of such similar scale in MRZ and HRZ seems contradictory.</p>	
James and Adriana Baddeley/ #164.5		Support	That sunlight access be better protected by further amending the medium/high density southern boundary recession plane to 45° from 3m at the boundary	
Richard Moylan/ #169.2		Seek Amendment	Support the sunlight qualifying matter and enhancing it to provide for outdoor washing drying.	
Tom Logan/ #187.3		Support	<i>[Retain 14.6.2.2 c. iv.]</i>	
Tom Logan/187.3	Kāinga Ora/ #FS2082.86	Support	<i>[Retain 14.6.2.2 c. iv.]</i> The removal of recession planes for buildings below 14 m within the HRZ, provided the building is within 20 m (or 60% of site	Support

			depth) of the front boundary, is a positive change. This is a clear recognition of the idea of 'eyes on the street', where a street is made safer by placing houses closer to the road boundary. With more people living in these houses in high-density neighbourhoods, this benefit will only increase.	
Tom Logan/ #187.10		Seek Amendment	Remove entirely or relax recession planes for buildings in HRZ.	
Riccarton Bush - Kilmarnock Residents' Association/ #188.5		Seek Amendment	[T]he Sunlight Qualifying Matter should be more conservative than proposed, to preserve sunlight to the same degree as is enjoyed under current density rules.	
Riccarton Bush - Kilmarnock Residents' Association/188.5	Tony Dale/ #FS2036.5	Seek Amendment	<p>[T]he Sunlight Qualifying Matter should be more conservative than proposed, to preserve sunlight to the same degree as is enjoyed under current density rules.</p> <p>RMDS were not formulated taking into account Christchurch conditions or the Christchurch context which makes them unfair and inequitable.</p> <p>The sunlight qualifying matter should not decrease the level of access to light that we currently enjoy, determined after proper consultation and examination during the 2015 Christchurch Replacement District Plan Review.</p> <p>We believe the impact, in terms of the level of densification this would limit, would be insignificant and would in no way jeopardise the overall aims or objectives of the NPS-UD.</p> <p>Notwithstanding the fact the proposed QM proposes a more conservative approach to treat Christchurch the same as Auckland to compensate for latitude difference, the shading (and therefore cooling) impacts are still different in Christchurch. Matt Edwards/ #189.3		Seek Amendment	Relevant clause: 14.6.2.2.c.iv. Relax requirements for the removal of recession planes to make it more feasible to developers to build on the front of a site.	
Matt Edwards/ #189.5		Oppose	14.6.2.2.a - Remove Sunlight Access QM.	
Matt Edwards/ #189.10		Oppose	Relevant clause: 14.6.2.2.b (Clause that dictates that recession planes still apply on parts of buildings above 12 m). Remove recession planes for taller buildings in HRZ, while maintaining height limits which was intention of NPS-UD.	
Logan Brunner/ #191.13		Support	[Retain c.iv]	
Logan Brunner/ #191.15		Oppose	[Remove proposed QM Sunlight Access]	

Logan Brunner/191.15	Anne Dingwall/ #FS2037.267	Oppose	<p>[Remove proposed QM Sunlight Access]</p> <p>The council's claim that 96% of housing capacity is retained under the Sunlight Access QM is misleading. CCC's Impact Assessment on the Sunlight Access QM only includes the effect on RS zones transitioning to MRZ. This ignores the impact on areas zoned as RMD that are transitioning to MRZ, or areas zoned HRZ. RMD and HRZ sites are more impacted by recession planes than RS, given they tend to be smaller. The example RS site, that is used to demonstrate the supposed loss in capacity, is 750 m². More than 50% of RMD sites and 2/3 of HRZ sites are less than 700 m². This means that the impact of applying recession planes is much more severe than for RS sites. Using an RS site as an example hides a much greater loss in housing capacity. We oppose the Sunlight Access QM on this basis, given it will result in a much greater loss in housing capacity than anticipated.</p> <p>We think that the broad application of the Sunlight Access QM across the city is disappointing and counterproductive. This broad application contradicts the intention of the MDRS, which was to allow 3-storey, 3-unit development across all urban areas in New Zealand. We also believe that amenities other than sunlight should have been considered. NPS-UD Policy 6(b)(ii) states that the significant changes to built form required "... may detract from amenity values appreciated by some people but improve amenity values appreciated by other people, communities, and future generations, including by providing increased and varied housing densities and type". This perspective should have been considered by the council when implementing the Sunlight Access QM. If increased sunlight access results in decreased housing affordability, as well as decreased access to employment, services, and amenities, is it really worth it?</p>	Oppose
Logan Brunner/ #191.19		Seek Amendment	[Remove b.] Remove entirely or relax recession planes for buildings in the High Density Residential Zone.	
Brian Gillman/ #196.4		Support	[Retain Sunlight Access Qualifying Matter as proposed]	
Megan Walsh/ #198.2		Oppose	Opposes 3 story buildings that will impact sunlight, privacy, safety and parking in most of the residential neighbourhoods.	
Joshua Wight/ #199.2		Support	<p>[Re: 14.6.2.2.c.iv]</p> <p>Support Perimeter-block form-factors encouraged in high-density neighbourhoods – eyes on the street.</p>	
Steve Petty/ #203.4		Oppose	Opposes building heights of 3 storeys that impact privacy, noise, housing, animals, people, green spaces and parking.	
Addington Neighbourhood Association / #205.8		Seek Amendment	Qualifying matters are needed to protect existing residents from losing their sunlight and warmth. Putting 2 & 3 story buildings next to some existing properties with solar panels could negate the usefulness of said panels through shading.

Pippa Marshall/ #271.8		Oppose	[S]eek[s] that the council drop [the Sunlight Access] qualifying matter.	
Caitriona Cameron/ #272.6		Seek Amendment	<p>The proposal should increase protection of sunlight access to maximise liveability features in new developments.</p> <ul style="list-style-type: none"> - The recession plane angles should be reduced to provide more sunshine access than in Auckland, not the same, to take account of the colder temperatures in Christchurch. - Recession planes and setbacks should be set to guarantee minimum sunshine access to adjoining properties, regardless of site width of those neighbouring properties. Recession plane angles should be reduced for those sites bordering sites narrower than the suggested standard of 15m. 	
Caitriona Cameron/272.6	Anne Dingwall/ #FS2037.389	Seek Amendment	<p>The proposal should increase protection of sunlight access to maximise liveability features in new developments.</p> <ul style="list-style-type: none"> - The recession plane angles should be reduced to provide more sunshine access than in Auckland, not the same, to take account of the colder temperatures in Christchurch. - Recession planes and setbacks should be set to guarantee minimum sunshine access to adjoining properties, regardless of site width of those neighbouring properties. Recession plane angles should be reduced for those sites bordering sites narrower than the suggested standard of 15m. <p>Impact of sunlight reduction on liveability of homes:</p> <ul style="list-style-type: none"> • Impact on existing houses <p>The proposed plans would significantly reduce sunlight access for many existing properties, with the result that many currently warm, healthy homes would no longer be so.</p> <ul style="list-style-type: none"> • Reduction in sunshine hours <p>The proposed variation to recession planes does not compensate sufficiently for reduced sunshine hours and solar strength in Christchurch.</p> <p>The proposal states: <i>"The sun's angle in Christchurch is different to its angle in Auckland, and the colder climate here means each hour of sunlight has greater benefit. The Sunlight Access Qualifying Matter aims to give Christchurch developments under the MDRS the same amount of sunlight access as Auckland developments."</i> (Housing and Business Choice, p. 20)</p>	Support

			<p>However, the proposed new recession planes address only one of these concerns. The altered recession allows for a similar number of days/hours with no sun in Christchurch as in Auckland, but does not address the second point about the greater need for sunlight. A true equivalent with Auckland would require even more generous recession angles to account for this difference.</p> <ul style="list-style-type: none"> • Impact of site width <p>The proposed recession planes (and setbacks) do not provide equitable outcomes for sites that are smaller than the model assumptions.</p> <p>The proposal states: "15m is a common site width in Christchurch and was a standard site used in subdivision until around 1970 ... It is the dominant site in the inner suburbs and around older centres such as Papanui, Riccarton and Spreydon. It is regarded as being important that the rules allow for 3 storey developments on these sites and if they do, it can be assumed that development will be possible elsewhere on the generally wider sites. Whilst there are some narrow sites around, these are a minority. Ensuring 15m wide sites can be developed will ensure that most sites in the city are suitable for 3 storey units." (Technical Report – Residential Recession Planes in Christchurch, p.10)</p> <p>Also, the models for the Sunlight Access (Technical Report – Residential Recession Planes in Christchurch) assume the site on the southern boundary of a new development has a 4m setback from its north boundary.</p> <p>The reality is that there are sites narrower than 15m, often with a setback from the north boundary of less than 4m. (There are many such sites in Rattray St.) The proposed recession planes will mean new developments on their northern boundaries will have a greater impact than the norm. Recession planes and setbacks need to provide an equitable outcome for sites regardless of dimensions.</p>	
Ian Chesterman/ #273.8		Oppose	[S]eek[s] that the council drop [the Sunlight Access] qualifying matter.	
Robert Fleming/ #274.8		Oppose	[S]eek[s] that the council drop [the Sunlight Access] qualifying matter.	
Steve Burns/ #276.4		Support	[Retain sunlight access provisions]

James Gardner/361.5	Anne Dingwall/ #FS2037.446	Oppose	[Regarding the Sunlight Access Qualifying Matter] seek[s] that the council drop this qualifying matter.	Oppose

			I oppose the Sunlight Access Qualifying Matter. There are many cities in the Northern Hemisphere that are further away from the equator and have a higher level of housing intensification than Christchurch. With a mix of medium and high density housing, these cities are considered some of the most livable cities in the world. This qualifying matter would restrict medium density housing height and size in such a way that would create a less efficient usage of land and limit future housing.	
James Gardner/361.5	Kāinga Ora/ #FS2082.296	Oppose	[Regarding the Sunlight Access Qualifying Matter] seek[s] that the council drop this qualifying matter. Ben Thorpe/ #658.7		Oppose	[O]ppose[s] the Sunlight Access Qualifying Matter...seek[s] that the council drop this qualifying matter.	
Ben Thorpe/658.7	Anne Dingwall/ #FS2037.1192	Oppose	[O]ppose[s] the Sunlight Access Qualifying Matter...seek[s] that the council drop this qualifying matter. I oppose the Sunlight Access Qualifying Matter. There are many cities in the Northern Hemisphere that are further away from the equator and have a higher level of housing intensification than Christchurch. With a mix of medium and high density housing, these cities are considered some of the most livable cities in the world. This qualifying matter would restrict medium density housing height and size in such a way that would create a less efficient usage of land and limit future housing. I seek that the council drop this qualifying matter. There are many cities in the world that have high density and are further from the equator than Christchurch. Cities such as Vienna, Copenhagen, Toronto, Geneva, and Calgary are consistently ranked some of the most livable cities in the world. This qualifying matter would reduce the maximum height and size of medium residential buildings below what is legally required. This qualifying matter has been developed with the expressed purpose of protecting and increasing property values rather than increasing the amount of affordable housing for people.	Support
Bray Cooke/ #660.8		Oppose	Oppose the Sunlight Access Qualifying Matter and seek that the council drop this qualifying matter.

Kāinga Ora – Homes and Communities / #834.219		Seek Amendment	Redraft provisions to improve clarity forplan users and ensure that dimensionsreferred to in the provision reflects blocksizes within the High Density Zone.	
Kāinga Ora – Homes and Communities /834.219	LMM Investments 2012 Limited/ #FS2049.138	Seek Amendment	Redraft provisions to improve clarity forplan users and ensure that dimensionsreferred to in the provision reflects blocksizes within the High Density Zone. Kāinga Ora supports theencouragement of perimeterblock development and buildingmass at front edge. Howeverthere is some concern over ifthe 20m, or 60% element of theprovision is appropriate. Forexample, the 20m length shouldbe increased to better align withstandard block sizes in the HighDensity Zone. Kāinga Ora isalso concerned, while the intentof the rule will achieve desireddevelopment outcomes, itsdrafting could be simplified.	Support
Historic Places Canterbury/ #835.18		Support	The submitter supports sunlight access being a qualifying matter in the high density zone.	
Historic Places Canterbury/835.18	Anne Dingwall/ #FS2037.605	Support	The submitter supports sunlight access being a qualifying matter in the high density zone. The submitter supports making sunlight access a qualifying matter so that recession planes can be adjusted to allow Christchurch developments under the MDRS to have the same amount of sunlight access as Auckland developments. Furthermore, we would argue that a similar amount of sunlight access to Auckland represents a bare minimum of what is acceptable because, with the lower temperatures experienced in Christchurch over winter, maximising sun access is a desirable objective not only to mitigate the need for greater energy use associated with heating but also to enhance health and well-being.	Support
Historic Places Canterbury/835.18	Anne Dingwall/ #FS2037.703	Support	The submitter supports sunlight access being a qualifying matter in the high density zone. Canterbury / Westland Branch of Architectural Designers NZ/ #685.62		Seek Amendment	Rewrite subclause (b)(iii) to, "Front boundary setbacks: Eaves, roof overhangs and / or guttering to a total maximum of 300mm in width measured from the outside extent of a building."	
Canterbury / Westland Branch of Architectural Designers NZ/685.62	Anne Dingwall/ #FS2037.1166	Seek Amendment	Rewrite subclause (b)(iii) to, "Front boundary setbacks: Eaves, roof overhangs and / or guttering to a total maximum of 300mm in width measured from the outside extent of a building." Subclause (b)(iii) is ambiguous. This can easily be interpreted as allowing a 300mm eave AND a 200mm gutter to be excluded from the setback requirement; we believe this is not the intent.	Support
Canterbury / Westland Branch of Architectural Designers NZ/685.62	Kāinga Ora/ #FS2082.407	Seek Amendment	Rewrite subclause (b)(iii) to, "Front boundary setbacks: Eaves, roof overhangs and / or guttering to a total maximum of 300mm in width measured from the outside extent of a building." Subclause (b)(iii) is ambiguous. This can easily be interpreted as allowing a 300mm eave AND a 200mm gutter to be excluded from the setback requirement; we believe this is not the intent.	Oppose
Ian McChesney/ #701.9		Seek Amendment	[S]etbacks should be set to guarantee minimum sunshine access to adjoining properties, regardless of site width of those neighbouring properties.	
Ian McChesney/701.9	Anne Dingwall/ #FS2037.561	Seek Amendment	[S]etbacks should be set to guarantee minimum sunshine access to adjoining properties, regardless of site width of those neighbouring properties. The proposed recession planes (and setbacks) do not provide equitable outcomes for sites that are smaller than the model assumptions. The proposal assumes 15m as a common site width, with the models for the sunlight access assuming the building on the southern boundary of a new development has a 4m setback from its north boundary (Technical Report – Residential Recession Planes in Christchurch, p.10). This report largely discounts narrower sites by stating "these are a minority". But the reality is that sites narrower than 15m are not uncommon in the proposed HDRZ in Riccarton, where setbacks of the existing residences from the north boundary can be less than 4m. Thus the proposed recession planes will impact even more on these properties. Recession planes and setbacks need to provide liveable and equitable outcomes for sites regardless of dimensions.	Support

Andrew Evans/ #89.16		Seek Amendment	Oppose the provision as notified.	
Cameron Matthews/ #121.21		Seek Amendment	Remove 10m High Density Residential Zone building separation rule – 14.6.2.5.	
Cameron Matthews/121.21	Christchurch International Airport Limited/ #FS2052.211	Seek Amendment	<p>Remove 10m High Density Residential Zone building separation rule – 14.6.2.5. SEE IMAGES WITHIN SUBMISSION</p> <p>This ensures 6-10m separation between upper-level units in adjacent HRZ buildings is maintained, and that floor width of upper-storeys remain feasible (at 5-9m for site widths of 15-20m). This incentivises development at the front of those sites, and to boost viability of medium density on older, narrow sites. One simple alternative ruleset which might help to achieve this, and which aligns well with the alternative HRZ built form standards above is to:</p> <ul style="list-style-type: none"> • change side/rear height-in-relation-to-boundary rules such that they are MDRS-compliant, i.e., 4m+60°, and, • waive HIRTB recession plane for parts of building in front 20m of a site (optionally for the rest of the site also) which are setback by more than around 3-5m from side/rear boundaries, and, • retain current height limits for 11+1m nominal, or 14m if LCIP applies, and, • Increase number of permitted units to 4, potentially only if LCIP applies. <p>In High Density Residential (HRZ) zones, nominally 14m height, the building envelope is extremely constrained above 12m, via a combination of recession planes, deep boundary setbacks, and restrictive height limits and building separation rules. This will severely limit the feasibility of many developments within the HRZ zone to achieve the scale nominally permitted by the zone.</p> <p>One mitigating factor is that at the front of sites, below 12m, exemptions for the recession plane, boundary setbacks, and building separation rules are made. While this is good, it is likely to create built forms which could otherwise be enabled under MRZ, if the same front-of-site recession/setback exemptions were to apply. These exemptions to recession planes and setback rules at the front of sites for MRZ were present in earlier versions of the proposed plan and should be re-incorporated.</p> <p>Regarding HRZ, the current proposal requires parts of buildings exceeding 12m height (3-4 storeys) to have 6-8m setbacks from side boundaries, be no higher than 14m (still only ~4 storeys unless low stud heights are used), be no closer than 10m from an a nearby unit, and if built at the rear of sites be confined to only 12m height and aggressive recession planes. CCC's data (Figure 25) shows average road frontage for HRZ land parcels is only ~20m, roughly translating into the site width (though likely inflated by corner sites). Older sites (pre-1970, i.e. the ones located predominantly around historically relevant town centres, like the city centre, Riccarton, Papanui, etc) are noted as being predominantly only 15m wide.</p> <p>Illustrating what the building envelope might look like under these rules, in Figure 26 the top floor is only (maximally, with low floor-separations) the 5th, and it's only maximally 6m wide. Considering that building above 3 storeys requires large fixed-cost investments into additional infrastructure (e.g. elevators, high fire resistance and/or sprinklers, fire engineering, wind report, etc), the limited saleable/rentable floor area from the combined 4th and 5th floors is likely to reduce actual built volume to only 3 storeys; i.e. only the nominal built height of MRZ sites. The building envelope on the right-hand-side shows the more egregious example, using a typical site from pre-1970's suburbs with a width of only 15m. Such a construction envelope completely rules out a 5th floor, further compromising the viability of building anything above 3-storeys in the HRZ zones.</p> <p>Importantly the site widths used for these illustrations show that even the average HRZ site is compromised for development above 3-4 storeys under the proposed rules. That could mean (depending on the statistical distribution of site widths) that around half of all sites zoned HRZ have even less feasible development prospects at heights exceeding 3 storeys. This is problematic in that in feasibly enabling only buildings of similar scale to MRZ – it provides very little incentive/allowances for development at increased scales/intensity in the areas most suited to it, i.e. those zoned for HRZ.</p> <p>In addition to the lack of development incentives exceeding 3 storeys, a low density-differential exists between the buildable envelope – even if built to their theoretical maximum limit – of both:</p> <ul style="list-style-type: none"> • An HRZ site built up at the road frontage vs built up along the side or rear boundary 	Oppose

			<p>· An HRZ site vs an MRZ site.</p> <p>The laudable goal of the proposed road-frontage recession-plane waiver for the front 20m / 60% is to encourage development at the front of sites, to help create a vibrant and active streetscape, to help manage overlooking between adjacent sites (without limiting density below legal minimum standards) and to improve privacy for residents, while boosting safety via ‘many-eyes’ on the street. However, as proposed it only provides a small bonus in habitable floorspace compared to developing the side or rear of the site. Considering that any provision of on-site car-parking or manoeuvring space provided will come at a cost to habitable area for a front-built site, but not for a side or rear-built site, the proposed waiver may not be sufficient to incentivise development at the road frontage.</p> <p>In addition – while I would argue that subjective aesthetic ideals should not be included in our strategy objectives (see section: INAPPROPRIATE AND SUBJECTIVE STRATEGY OBJECTIVES) – if CCC is aiming to have “legible urban form” with “contrasting building clusters”, “appropriate scale, form”, and to manage the “clustering, scale and massing” (Chapter 3 Strategic Directions 3.3.7 Objective – Well-functioning urban environment) of our more densely populated centres, then allowing built forms of such similar scale in MRZ and HRZ seems contradictory.</p>

Victoria Neighbourhood Association (VNA) / #61.34		Seek Amendment	Amend 14.2.6.7 to discourage the use of impervious/impermeable surfaces.	
Victoria Neighbourhood Association (VNA) /61.34	Anne Dingwall/ #FS2037.114	Seek Amendment	<p>Amend 14.2.6.7 to discourage the use of impervious/impermeable surfaces.</p> <p>The VNA supports the provisions for retaining, increasing and maintaining the health of Christchurch's tree canopy cover, set out in 6.10A and supported by the Section 32 Evaluation report (Part 7). In particular, we support, as written Policies 6.10A.2.1.2 and 2.1.3 Standard 6.10A.4.2.2 (Financial Contributions).</p> <p>We submit that in many cases the provisions need to be strengthened, a message consistent with VNA's submission on the Urban Forest Plan, including:</p> <ul style="list-style-type: none"> - Commercial/industrial sites in Strategic Objective 3.3.10 (a) (ii) E, - Objective 6.10A.2.1, Policy 6.10A.2.1.1 and Standard 6.10A.4.1.1; Increase the minimum cover from 20% to 25% (6.10A.4.1.1); - Discourage the use of impervious/impermeable surfaces; - Increase the Financial Contribution per tree significantly as a disincentive to removing or not replacing trees on the development site; - Rewrite the Matters of Discretion to make it less likely that trees will be removed or not replaced on site. 	Support
Ali McGregor/ #65.4		Seek Amendment	Encourage retention of tree canopy and green space on residential sites.	
Ali McGregor/65.4	Anne Dingwall/ #FS2037.133	Seek Amendment	<p>Encourage retention of tree canopy and green space on residential sites.</p> <p>This [multi-unit residential development] has the effect of removing all the trees from sections. Where once there was about 50% of a section which was 'green' it is now all concrete. My personal experience is that two of my boundaries which were tree lined are now bare of those mature trees and I have neighbours so close that I can hear their conversations.</p> <p>This has a detrimental effect on the physical environment. The loss of greenery also has a negative impact on the mental and emotional health of the residents.</p> <p>Apart from that, the increase in sealed areas means more run-off and makes the area more prone to flooding. Climate change has seen heavier rainfall and therefore more frequent flooding events already, so if this trend is to continue it will only lead to more problems.</p>	Support
Andrew Evans/ #89.18		Oppose	<p>Oppose the proposed provisions 14.6.2.7d-f Landscaped area and tree canopy</p> <p>Seek amendment to 14.6.2.7c: alter clause to 'The 20% landscaped area may be provided as a sum across the site, as long as there is a minimum dimension of 0.45m. (was 0.6m).</p>	
Te Mana Ora/Community and Public Health/ #145.13		Support	Te Mana Ora supports the different proposals to support tree cover in the Housing and Business Choice Plan Change Consultation Document, including to update tree setbacks to better protect individual trees and to incentivise more tree planting, Financial Contributions, and the Schedule of Significant and Other Trees becoming a Qualifying matter.

John Stackhouse/ #330.3		Seek Amendment	The submitter requests that where a high-density zone (HDZ) meets medium density zone (MDZ, the boundary) ensure at least a 10m natural planting corridor on HDZ areas where the HDZ bounds a MDZ.	
John Stackhouse/330.3	Kāinga Ora/ #FS2082.276	Seek Amendment	<p>The submitter requests that where a high-density zone (HDZ) meets medium density zone (MDZ, the boundary) ensure at least a 10m natural planting corridor on HDZ areas where the HDZ bounds a MDZ.</p> <p>The application of a buffer zone on the zone edge would soften the impact of high-density development on neighbouring medium-density properties. This would lead to more consistent respect of the living conditions for those in neighbouring medium-density housing, particularly with regard to light and privacy.</p> <p>The current 'hard' boundaries in effect have HDZ regulations applied to one or more boundaries of MDZ properties leading to an inequitable and detrimental outcome for those properties. This is not a desirable outcome as it immediately disadvantages these property owners of MDZ properties and does not lead to an outcome based on 'natural justice'. It disadvantages them significantly with regard to privacy and sunlight in particular by applying HDZ regulations to at least one boundary of a MDZ property.</p>	Oppose

Greater Hornby Residents Association/ #788.5		Seek Amendment	Hornby should be exempt from the Tree Levy and Developers should be made to ensure density developments have a 20% tree canopycover.	
Greg Partridge/ #794.5		Oppose	The submitter opposes the reduction in Christchurch's tree canopy cover by housing intensification. The Council should seek an immediate amendment to the Enabling Housing Supply and Other Matters Act to be implemented in order for regulations to be introduced that protect the city's tree canopy from being decimated by property developers.	
Greg Partridge/794.5	Anne Dingwall/ #FS2037.728	Oppose	<p>The submitter opposes the reduction in Christchurch's tree canopy cover by housing intensification. The Council should seek an immediate amendment to the Enabling Housing Supply and Other Matters Act to be implemented in order for regulations to be introduced that protect the city's tree canopy from being decimated by property developers.</p> <p>The submitter has concerns regarding the loss of the city's tree canopy from housing intensification and lack of effort by Council to protect trees or increase the tree canopy. The submitter provides the following analysis on the importance of protecting and enhancing the tree canopy:</p> <ul style="list-style-type: none"> - The tree canopy coverage of our city is essential, and as green infrastructure it should be viewed by the City Council and Council policy as a "Priority #1 Must Have" rather than a "Nice to Have." - Disappointingly however, since declaring a Climate and Ecological Emergency four years ago in May 2019, the Christchurch City Council have not added any additional trees the list of protected trees in our city in spite of the fact the City Council has been advised through academic reports and assessments that the percentage of tree canopy coverage has diminished across Christchurch and significant trees have been lost from our landscape. - A mapping report commissioned by the City Council through the University of Canterbury provided the Council with a snapshot of the tree canopy cover in Christchurch between 2018 and 2019. It revealed that since the previous mapping was completed in 2015 and 2016 tree canopy coverage had dropped from 15.59% down to 13.56% in less than three years. That 2-percentage point reduction equates to a 13.02% decrease in the overall tree canopy coverage of our city. - In a city that has declared a Climate and Ecological Emergency, that should set off alarm bells, however given the fact again there appears to be no mention of the retention of our cities existing established trees in the Growing Christchurch Plan, it would appear the Council are either very much asleep at the wheel, disinterested or are disingenuous in terms of the declaration in spite of all the rhetoric. - The Council's Head of Parks Andrew Ruttledge has said trees are going to play an increasingly vital role in carbon sequestration as the Council tries to achieve its goal of becoming carbon neutral by 2045, and yet in the Ōtautahi Urban Forest Plan the Council have only set a target to increase the tree canopy coverage of Christchurch to 20%, and not until 2070 – that's 47 years away. When compared to neighbouring cities in Australia, the aims of our City Council are lacking. - Not only should it be retained, but the tree canopy coverage of our entire city must be enhanced in order for the Council's declaration of a Climate and Ecological Emergency to be given any tangible meaning, and not just in the public parks of our city, but throughout every suburb and residential street of Christchurch. - Over recent years, thousands of well-established trees have been clear felled by property developers who operate with no environmental code of ethics in their business. Their primary focus is on making money, which is understandable, however the commercial interests and short-term financial gains of a limited few should not be given preference over the long-term environmental gains of the masses, nor should it compromise the environment that will be inherited by generations of today's citizens, nor those of the future. - The Council's declaration of a Climate and Ecological Emergency was a call to action, but four years have passed and nothing has been done to protect and guarantee that the existing established trees of our city and suburbs are retained. 	Support

			<ul style="list-style-type: none"> - Elected members of the Council and Staff have given the excuse that due to government legislation it is very difficult to protect trees. Auckland Council however have managed to increase its number of protected trees over the same four years. - If the city is to grow and is to be a healthy sustainable city that functions well, a city that puts the wellbeing of its citizens, visitors and environment first, it must be well planned and well considered rather than blindly adhering to the edict and directives of political parties who have a vested interest in gaining political support. - The commercial gains and wants of a limited few should not be put first and enabled at the expense and wellbeing of those who live here, nor should the environment be compromised. 	
Fred Coughlan/ #798.9		Oppose	delete the financial contribution provisions, which may require up to 40% landscaping on a site in conflict with the MDRS and the RMA	
Fred Coughlan/798.9	Chapman Tripp/ #FS2063.96	Oppose	<p>delete the financial contribution provisions, which may require up to 40% landscaping on a site in conflict with the MDRS and the RMA</p> <ul style="list-style-type: none"> - will add another layer of complexity to the development process and is considered to 'double up' on the charges already levied by council as part of Development Contributions. - proposed requirement goes beyond the mandate of the NPS-UD and MDRS requiring a minimum landscaped area of 20% of a development site. - Wolfbrook developments in Christchurch consistently provide for more than 20% landscaping across an application site and seeks to incorporate native grasses, shrubs and trees where suitable. There have also been recent instances where council has required Wolfbrook to remove trees and replace these with shrubs in order to avoid effects on utilities which run through privately owned sites. - The use of financial contributions through PC14 as a means to promote urban tree canopy cover in Christchurch is a blunt instrument and represents a one-size-fitsall approach which does not account for the varying site characteristics 	Support

Kāinga Ora – Homes and Communities / #834.121		Oppose	Delete Section 6.10A and all associated provisions.	
Kāinga Ora – Homes and Communities /834.121	Catholic Diocese of Christchurch/ #FS2044.86	Oppose	Delete Section 6.10A and all associated provisions. Kāinga Ora welcomes the Council's recognition of trees as a key element in successful urban environments. Kāinga Ora strongly support the Council increasing its prioritisation of the need to renew streetscapes, especially in areas where intensification has and will continue to occur. Such renewals should include kerb and channel replacement, undergrounding of overhead wires, and street tree planting. Kāinga Ora has substantial concerns with the 20% tree canopy cover target and considers it fundamentally unachievable in medium and high density environments on private land. Kāinga Ora consider the requirements to achieve 20% tree canopy cover is inconsistent with the spatial outcome requirements set out in the NPS-UD, and the Medium Density Residential Standard (MDRS) provisions of the Housing Supply Act. Kāinga Ora considers that the proposed financial contribution calculator is complicated and flawed, a simpler formula would be to require 1 tree to be planted per 100m ² of site area, as an easier compliance threshold than a trigger of 10% of future canopy cover. It also has concerns with the reliance on Financial Contributions. Given that Council already own extensive areas of park and open space land (including several thousand hectares of land on the Port Hills and Red Zone), in addition to extensive road reserve and local park areas, and given that Council takes Development Contributions for new parkland as part of any new development, the need for the land component to form part of the financial contributions appears to be particularly hard to justify. The need to provide rapid canopy cover potentially creates a perverse incentive to plant faster growing exotic species rather than natives. The proposed Financial Contribution could therefore result in a decline in biodiversity by driving developers to plant exotics over natives, with attendant adverse biodiversity outcomes, which is contrary of the desire in the Urban Forest Plan to seek diversity in tree species	Support

Kāinga Ora welcomes the Council’s recognition of trees as a key element in successful urban environments. Kāinga Ora strongly support the Council increasing its prioritisation of the need to renew streetscapes, especially in areas where intensification has and will continue to occur. Such renewals should include kerb and channel replacement, undergrounding of overhead wires, and street tree planting. Kāinga Ora has substantial concerns with the 20% tree canopy cover target and considers it fundamentally unachievable in medium and high density environments on private land. Kāinga Ora consider the requirements to achieve 20% tree canopy cover is inconsistent with the spatial outcome requirements set out in the NPS-UD, and the Medium Density Residential Standard (MDRS) provisions of the Housing Supply Act. Kāinga Ora considers that the proposed financial contribution calculator is complicated and flawed, a simpler formula would be to require 1 tree to be planted per 100m2 of site area, as an easier compliance threshold than a trigger of 10% of future canopy cover. It also has concerns with the reliance on Financial Contributions. Given that Council already own extensive areas of park and open space land (including several thousand hectares of land on the Port Hills and Red Zone), in addition to extensive road reserve and local park areas, and given that Council takes Development Contributions for new parkland as part of any new development, the need for the land component to form part of the financial contributions appears to be particularly hard to justify. The need to provide rapid canopy cover potentially creates a perverse incentive to plant faster growing exotic species rather than natives. The proposed Financial Contribution could therefore result in a decline in biodiversity by driving developers to plant exotics over natives, with attendant adverse biodiversity outcomes, which is contrary of the desire in the Urban Forest Plan to seek diversity in tree species	Support
Kāinga Ora – Homes and Communities / #834.224		Seek Amendment	Delete [standard] and replace with the following:14.5.2.2 landscaped area(1) A residential unit at ground floorlevel must have a landscaped area of a minimum of 20% of a developed sitewith grass or plants, and can includethe canopy of trees regardless of theground treatment below them.2. The landscaped area may be locatedon any part of the development site,and does not need to be associatedwith each residential unit.3. Non-residential activities must havea landscaped area of a minimum of20% of a developed site with grass orplants, and can include the canopy oftrees regardless of the groundtreatment below them.

Historic Places Canterbury/ #835.11		Not Stated	The submitter supports all efforts to incentivise tree planting, including the canopy cover requirements relatingto development and subdivision consents.	
Historic Places Canterbury/835.11	Anne Dingwall/ #FS2037.598	Not Stated	The submitter supports all efforts to incentivise tree planting, including the canopy cover requirements relatingto development and subdivision consents. Even where mature trees are retained, it is vital to ensure that this will not just be for long enough to obtain the desired resource consent, only to have the trees die or require removal a few years down the track. All too often around the city large trees are seen to be dying back because they have suffered unsustainable root damage during construction nearby. While the rules make provision for providing sufficient soil volume and tree root dimensions for the tree's requirements and provide for maintenance of the trees or removal and replacement of any that are damaged, it is not clear how this will, in practice, be monitored.	Support

A minimum of 50% of the ground floor area across the site shall be occupied by habitable spaces and/or indoor communal living space. This area may include pedestrian access to lifts, stairs, and foyers</p> <p>The Operative Plan includes a rule controlling ground floor habitable rooms which is well-established and appears to be working well. There are two key design outcomes sought, namely 1) the ground floor on the road frontage is habitable space rather than garaging in order to deliver positive streetscape outcomes; and 2) that at least 50% of the ground floor across the site is habitable space, to avoid the ground floor of complexes being overly dominated by garaging and undercroft parking areas. The proposed rule is sought to be amended to better articulate these two outcomes and to avoid developments arranged as horizontally stacked low-rise apartments being unnecessarily penalised through a requirement for every unit to individually have ground floor space. The outcome of 50% habitable at ground floor across a site is an appropriate outcome for HRZ.</p>	Support

Cheryl Horrell/ #11.7		Seek Amendment	Provide enclosed outside private space	
Ali McGregor/ #65.5		Seek Amendment	Provide adequate outdoor space for families.	
Ali McGregor/65.5	Anne Dingwall/ #FS2037.134	Seek Amendment	Provide adequate outdoor space for families. The sections with multi-units are not suitable for children to play outside. In a society where there is already concern for the well-being of young people, reducing the opportunity for them to be outside and gaining the benefits of exercise, fresh air and socialisation is foolhardy and is the opposite of what we are trying to promote. Isolation in small units is the result.	Support
Andrew Evans/ #89.20		Support	Support provisions as notified	
Michael Tyuryutikov/ #334.5		Oppose	Retain existing minimal courtyard area rules for residential properties.	
Retirement Villages Association of New Zealand Inc/ #811.75		Support	Retain Standard 14.6.2.10 as notified.	
Retirement Villages Association of New Zealand Inc/811.75	Summerset Group Holdings Limited/ #FS2097.69	Support	Retain Standard 14.6.2.10 as notified. Although these internal amenity standards are not applicable to retirement villages, the RVA would like to reiterate their support for the exclusion of retirement villages from these standards. Doug Latham/ #30.10		Seek Amendment	Amend Rule 14.6.2.11 'Service, storage, and waste management' to reduce storage volumes required and/or allow bedroom & garage storage to be included.	
Andrew Evans/ #89.22		Oppose	Oppose the provisions as notified and seek to have it removed.	
Andrew Evans/89.22	Stantec/ #FS2032.44	Oppose	Oppose the provisions as notified and seek to have it removed. 1) Having required storage in each unit is a nightmare – -this is worse than the current rules, the MDRS/ new rules are supposed to make it easier to do multi-unit dwellings, it might sound drab but please let the market decide & stop micromanaging; if future occupants want to add a garden shed they can, if they don't they wont don't make developers add them, its more cost for both design and construction & red tape. 2) should the panel not accept deleting this clause then at least excludes garages- garages are basically storage areas and should be allowed to be included in the storage requirements, it is non-sensical to not allow this (in fact if you have a garage it should be deemed to comply)	Oppose
Andrew Evans/89.22	Kāinga Ora/ #FS2082.46	Oppose	Oppose the provisions as notified and seek to have it removed. 1) Having required storage in each unit is a nightmare – -this is worse than the current rules, the MDRS/ new rules are supposed to make it easier to do multi-unit dwellings, it might sound drab but please let the market decide & stop micromanaging; if future occupants want to add a garden shed they can, if they don't they wont don't make developers add them, its more cost for both design and construction & red tape. 2) should the panel not accept deleting this clause then at least excludes garages- garages are basically storage areas and should be allowed to be included in the storage requirements, it is non-sensical to not allow this (in fact if you have a garage it should be deemed to comply)	Support
Nikki Smetham/ #112.13		Support	[Retain minimum storage standard]	
Stantec/ #184.10		Support	Support in part Concerned about the prescriptiveness of this rule and the potential for perverse, albeit unintentional, design outcomes for a development. Similar concern with Rule 14.5.2.13 (a)(ii) in the Medium Residential Zone	
Canterbury / Westland Branch of Architectural Designers NZ/ #685.72		Seek Amendment	Amend subclause (a)(i) to, "Each residential unit shall have sufficient accessible, useable and screened space for the storage and use of three wheelie bins, or provision for shared waste storage facilities."	
Canterbury / Westland Branch of Architectural Designers NZ/685.72	Anne Dingwall/ #FS2037.1176	Seek Amendment	Amend subclause (a)(i) to, "Each residential unit shall have sufficient accessible, useable and screened space for the storage and use of three wheelie bins, or provision for shared waste storage facilities." The wording of this rule can have perverse outcomes where too much space is required to be allocated to waste storage in some instances.	Support
Canterbury / Westland Branch of Architectural Designers NZ/685.72	Kāinga Ora/ #FS2082.417	Seek Amendment	Amend subclause (a)(i) to, "Each residential unit shall have sufficient accessible, useable and screened space for the storage and use of three wheelie bins, or provision for shared waste storage facilities." The wording of this rule can have perverse outcomes where too much space is required to be allocated to waste storage in some instances.	Oppose
Mitchell Coll/ #720.38		Seek Amendment	14.6.2.11 (a)(i) Amend subclause (a)(i) to, "Each residential unit shall have sufficient accessible, useable and screened space for the storage and use of three wheelie bins, or provision for shared waste storage facilities."	
Fred Coughlan/ #798.14		Seek Amendment	Washing line space should not be a dedicated area if a fold down system is proposed.	
Fred Coughlan/798.14	Kāinga Ora/ #FS2082.585	Seek Amendment	Washing line space should not be a dedicated area if a fold down system is proposed. This will allow integrating washing lines with outdoor living area to maximise efficient use of space for compact housing typologies.	Support
Fred Coughlan/ #798.15		Seek Amendment	Clarify Storage requirement	

Fred Coughlan/798.15	Kāinga Ora/ #FS2082.586	Seek Amendment	Clarify Storage requirement The storage requirement drafting is confusing (e.g. it could be interpreted as needing 6m ³ of internal storage + 6m ³ covered and secured storage = 12m ² for a 1- bed unit). All units will effectively need sheds or lock ups, which may not be desirable for middle terrace units. It is accepted that PC14 requires bike parking on-site, but this can be achieved in common spaces where necessary. If outdoor storage is required, then outdoor living should be more enabling to discount the shed area from the calculation.	Support
Fred Coughlan/ #798.16		Seek Amendment	Amend waste management space requirement to be more flexible for communal bin areas and waste management plans.	
Fred Coughlan/798.16	Kāinga Ora/ #FS2082.587	Seek Amendment	Amend waste management space requirement to be more flexible for communal bin areas and waste management plans. Having communal bin areas which are a sum of the individual bin requirements is inefficient and does not provide flexibility for communal bin areas. There should be an exception for a waste management plan that reflects the estimated waste demand for a residential development that may also provide for greater frequency of collection and therefore less bin space (and the resulting land use efficiency).	Support
Kāinga Ora – Homes and Communities / #834.228		Seek Amendment	Delete clause (b). Retain clause (a), noting that if outdoor storage is addressed as an urban design assessment matter then a separate rule may be unnecessary.	
Kāinga Ora – Homes and Communities /834.228	Stantec/ #FS2032.46	Seek Amendment	Delete clause (b). Retain clause (a), noting that if outdoor storage is addressed as an urban design assessment matter then a separate rule may be unnecessary. Clause (a) relating to outdoor storage is supported, although may be an unnecessary level of regulation if this matter is covered by urban design assessment matters. Clause (b) is a new rule in PC14. It requires a minimum amount of internal storage to be provided. Whilst internal storage spaces are useful, this rule is considered to be an unnecessary level of regulation.	Oppose
Kāinga Ora – Homes and Communities /834.228	LMM Investments 2012 Limited/ #FS2049.148	Seek Amendment	Delete clause (b). Cheryl Horrell/ #11.6		Seek Amendment	<i>[Less impervious surfaces]</i>	
Cheryl Horrell/11.6	Anne Dingwall/ #FS2037.44	Seek Amendment	<i>[Less impervious surfaces]</i>	Support

			<p>Nothing in Council's proposal will protect existing homes from increased stormwater run-off from multiple housing units being built on surrounding properties.</p> <p>Several single home sites are under development in Woolston at present and all but one (52 McKenzie Ave) are being replaced by four or five individual units. Your proposals to manage flooding by raising housing floor levels do not stand up to scrutiny; five new houses will undoubtedly contribute more stormwater pressure on existing systems than the original one home surrounded by permeable land.</p> <p>Development taking place in Woolston in late 2022 and early 2023 contain multiple units, up to five homes per section (six in one Smith Street development) on land originally consented for one residential dwelling. These multiple units are surrounded by impermeable surfaces which are likely to contribute to increased surface flooding which will not prevent new homes from being flooded, even on higher foundations.</p> <p>. What existing residents need is much better drainage, less cramped in housing and more permeable surfaces if we are not to slip under future floodwaters. Existing home owners cannot do anything about their land having slumped but it would be a grave injustice if our homes were to be flooded because greater housing density contributed to water flooding into lower lying houses.</p>	
Victoria Neighbourhood Association (VNA) / #61.7		Oppose	Delete subclause a.ii.A from Rule 14.6.2.12.	
Victoria Neighbourhood Association (VNA) /61.7	Kāinga Ora/ #FS2082.19	Oppose	Delete subclause a.ii.A from Rule 14.6.2.12. Subclause (a)(ii) allows an increase in site coverage to 60% when no vehicle parking is provided and other requirements are met (Subclauses B, C, and D). We have concerns regarding this provision particularly with regard to on-street parking overload. The combination of rewarding lack of on-site parking and increased site coverage will compound the demand for on street parking until suitable alternatives are well provided for in our neighbourhood (including public charging of EV's). We have not seen any extensive evaluation of effects, but already are experiencing negative effects in our area (such as EV charging cables laid across footpaths and gutter channels).	Oppose
Rachel Davies/ #67.12		Seek Amendment	Rigid controls should be in place for access to sunlight and privacy along with how much land coverage dwellings can take up on a plot of land

Fred Coughlan/ #798.17		Seek Amendment	Amend to control garaging on the street facing boundary only as that is the primary view.	
Fred Coughlan/798.17	Kāinga Ora/ #FS2082.588	Seek Amendment	Amend to control garaging on the street facing boundary only as that is the primary view. This efficacy of this standard is questionable as 3 residential units may all face the street with garaging (provided glazing and transportation requirements are met). That presents a compelling permitted baseline. Limiting garaging to the rear façade also does not allow for side elevation garaging, which is common, efficient, usually screened from the street by front dwellings. This should be amended to control garaging on the street facing boundary only as that is the primary view.	Support

Kāinga Ora – Homes and Communities /834.232	LMM Investments 2012 Limited/ #FS2049.152	Oppose	Delete the [standard]. Presumably it is visual effects that are the concern. Level of design detail that is unnecessary to regulate. If mounted at ground level then even a short 1.2m high fence is sufficient to visually screen in a similar manner to the proposed rule on bin storage. As drafted the rule applies to mechanical units on the ground, whereas they would be permitted if wall-mounted despite having a worse visual outcome. It also applies to mechanical units located adjacent to internal boundaries where the property next door (over the fence) has an accessway.	Support

Oppose

Remove Residential Mixed Density Precinct – Redmund Spur and Residential Hills zoning, applying MDRS and NPS-UD, as applicable.

Residential Hills Precinct, Residential Mixed Density Precinct – Redmund Spur, and Residential Hills Zone all serve to limit the permitted residential density in the wealthy and desirable suburbs of the northward Port Hills. In addition, Residential Suburban zoning remains in place for large parts of the city. These do not meet the density standards required by MDRS and NPS-UD, and should be removed from the proposed plan, or their rules changed such that their density limitations are no more than permitted by MDRS and NPS-UD rules.

As the density restrictions in Residential Hills Precinct, Residential Mixed Density Precinct – Redmund Spur, and Residential Hills Zone exceed the limits defined under MDRS, and are not attributed to any Qualifying Matter, they are not allowed by MDRS legislation and should be removed or revised.

Support

In addition, Residential Suburban zoning is included in the proposed plan, despite those rules limiting permitted density in affected sites to below MDRS standards. In large part this zoning is not the effective limit to density, as in all cases council also propose an overlapping, equally restrictive Qualifying Matter. However, many of those proposed Qualifying Matters have tenuous evidence/rationale and should themselves be removed from the plan or substantially adjusted. If QMs are removed or adjusted, it is important to also re-zone the underlying sites to a more appropriate zone which complies with NPS-UD and MDRS, such as MRZ, HRZ, etc. to ensure that density restrictions exceeding MDRS and NPS-UD allowances are eliminated from the plan.

The sites in the predominantly north-facing Port Hills covered by the proposed Residential Hills Precinct, Residential Mixed Density Precinct – Redmund Spur, and Residential Hills Zone also enjoy excellent and unique amenity values – such as elevated views of the city, plains, mountains and ocean, and access to natural landscapes of the Port Hills above – reflected in their higher capital values (see Figure 12) compared to much of the rest of the city. These high values are evidence that these areas have “high demand for housing or for business land”. NPS-UD Objective 3c requires that “...district plans enable more people to live in...” such areas.

These same unique amenity values also create a somewhat isolated land and development sub-market compared to the rest of the city. The proposed zoning reduces the otherwise-plan-enabled housing capacity for this sub-market, inflating housing unit price despite theoretical surplus housing capacity existing elsewhere. NPS-UD makes clear – through Policy 1(a)(i): ...have or enable a variety of homes that...meet the needs, in terms of type, price, and location, of different households – that such unit price inflation due to council-imposed supply constraints does not represent a “well-functioning urban environment”. Therefore, these zones and precinct run counter to both Objectives 1 and 2 of the NPS-UD.

To conclude and re-iterate: the Residential Hills Precinct, Residential Mixed Density Precinct – Redmund Spur, Residential Hills Zone, and RS zone should be removed from the proposed plan, or their rules changed such that their density limitations are no more than permitted by MDRS and NPS-UD rules.

Elliot Sinclair / #2108.3		Seek Amendment	Seeks amendment to provisions of the Residential Hills zone to allow for more variety in housing type.	
Elliot Sinclair /2108.3	Rachel Sanders/ #FS2110.2	Seek Amendment	Seeks amendment to provisions of the Residential Hills zone to allow for more variety in housing type. The submitter supports the zoning proposed under PC14 for 22 Red Rock Lane which to be Residential Hills (“RH”) however, requests amendment of the RH zone to incorporate amended rules that would provide for some additional housing by inserting “Multi-unit” provisions into the RH zone, consistent with how they are applied elsewhere in the District. This would enable additional housing that is subject to a simpler resource consent process than would be currently provided for, that matches the appropriate built form standards and existing character of the RH zone. This is on the basis that intensification (additional housing) could be appropriate where a landowner is able to satisfactorily address the cultural significance qualifying matter overlay. The submitter understands the cultural significance qualifying matter overlay will replicate and adopts the existing district plan provisions for the existing Ngā Tūranga Tūpuna. This is shown in Figure 2. This currently relates to earthwork activities on the Port Hills, which allow cultural input into the resource consent applications where earthworks are proposed. This site is not in an existing silent file area.	Oppose

Submission Number	Further Submission No	Position	Decision Requested	FS Position
Atlas Quarter Residents Group (22 owners) / #224.4		Oppose	That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible	
Atlas Quarter Residents Group (22 owners) /224.4	Kāinga Ora/ #FS2082.168	Oppose	That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible	Oppose

Who we are:

This submission is made on behalf of the following persons, all of whom own units in the Atlas Quarter, 36 Welles Street, Christchurch Central:

Richard Ball, Athena Ellis, Phil and Lynette Stenning, Max Lucas, Paul and Jeni Neilson, Jenny Jia and Zhongyang Yuan, Piers and Emma Bayley, Rachel and Tim Scanlan, Eileen and Vernon Payne, Bruce Fraser, Eléonore Dumaine, Peter and Faye Greenwood, Alan Steel, Gillian Smeith, Chelsea Kennedy, Deborah Bowker, Kate and Mike Peers, Peter Morris, Mathilde Vachon, Barbra Pullar, Martin Rumbold and Kirsty Stewart.

Key points:

We support well designed intensive residential and commercial development, integrated with sustainable transport options. We have already “put our money where our mouths are” by purchasing units in the Atlas Quarter, a large and successful inner-city development of 110 residential and three commercial units.

We oppose the greatly increased height limits proposed by Plan Change 14. They are unnecessary and inappropriate for Christchurch.

We support the inclusion of qualifying matters to enhance design quality and urban amenity across the City.

Relief sought:

1. That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible.
2. Where Government legislation and regulations require increases to height limits, that these are kept to the minimum extent possible for compliance with the regulations.
3. The need for greater intensification is supported but this does not require or justify the proposed increases in height limits as permitted activities.
4. The inclusion of the qualifying criteria is supported, independent of height limits, as a means of promoting good design and ensuring new buildings do not adversely impact existing buildings designed and constructed within the current District Plan requirements.

Reasons:

Following the Christchurch earthquakes, a comprehensive design process was undertaken for the City, particularly for the central city. Deliberate and well-informed decisions were made create a liveable city, with intensified development in the central city and around suburban centres, but with lower central city height limits than previously existed. This has created a compact central city with increased densities compared to before the earthquakes, but without the height of some of the buildings that Christchurch had pre-earthquake . The consolidation has resulted in many vacant sites becoming available which are gradually being filled.

This model was developed by looking at best practice around the world, combined with local input from residents and experts, to create an attractive and vibrant City. It set ambitious goals for increasing densities for residential living, especially in the central city and around suburban centres. It was fully integrated with future transport options and climate resilience objectives.

It has widespread local support and was developed with considerable input and investment from Government (via CERA) and Christchurch City Council. It integrated land use and transport, seeking higher densities and more sustainable transport, as reflected in the Land Use Recovery Plan, Christchurch Central Recovery Plan and the Central City Transport Plan. It was embedded into the District Plan through an Independent Hearing Panel of experts hand-picked by the Government.

The greatly increased height limits proposed Plan Change 14 undermines the objectives and principles that underpin the vision of the 2015 Christchurch Central Recovery Plan:

“To become one of the best small cities in the world, Christchurch needs a city centre that is:

- *an inspiring place to live*
- *an attractive place to invest*
- *the best urban environment in New Zealand.”*

The decision to limit heights was a deliberate choice in achieving this vision. The proposed changes will undermine existing investments, entered into in good faith based on the Recovery Plans, while also reducing the central city’s design coherence and creating a less attractive City.

			<p>The many empty sites and carparks that still exist post-earthquake provide adequate future capacity for the foreseeable future, including the “competitive margin” required by Government regulations. The only apparent reason for increasing the height limits appears to be compliance with new Government regulations. If the height limits are to be increased, this change should be done to the minimum extent needed to comply with these ill-considered Government requirements. There is no other justification for the proposed rules.</p> <p>The proposed rules allow new development to be concentrated in a small number of very tall buildings, with the negative impacts such as greater shading and wind tunnels, accompanied by a continuation of many empty and ugly lots in the central city. As the vacant sites are largely filled with cheap carparking, this further undermines the stated transport sustainability and climate resilience objectives.</p> <p>The scale of the buildings permitted under PC14 is not consistent with the extensive post-earthquake developments that have already occurred. The post-quake developments have created a very attractive City which will be undermined by these proposals. Existing intensive residential developments, such as the Atlas Quarter, could be overshadowed by new buildings of nearly twice the height on the east and west, blocking sunlight. Others may be blocked to the north.</p> <p>In short, the proposal for increased heights across the City are ill-considered solutions for problems that exist in Auckland, Wellington, and possibly other centres, but are not applicable to Christchurch. The geography and existing development of these other centres constrains new development. Post-earthquake Christchurch is quite different from these other centres: it is not constrained for growth opportunities, as demonstrated by the far slower growth in property prices over recent years. Even before the earthquakes, Christchurch had far more stable (less volatile) prices than Auckland and Wellington – a trend that has persisted since at least the 1970’s. In Christchurch there is housing choice, particularly with substantial increases in the number of higher density residential apartments.</p> <p>Maximising the benefits of intensification needs to consider the dis-benefits. The proposed Plan identifies loss of tree cover as a disbenefit but does appear to put sufficient emphasis on other matters. Why does it propose financial contributions for loss of tree cover but not for loss of sunlight to others, wind tunnel effects or loss of amenity? In the Christchurch context, the widespread demolition of much of the central city, including most of the taller buildings, and consolidation of activities into more compact precincts, has created a much more attractive City with a visual appearance and aesthetic appropriate for the size of the City, reflected in the Central City Recovery Plan issued by CERA after extensive public and expert engagement. Both residents and visitors are commenting on the attractiveness of this new look. Re-introducing unnecessarily large buildings undermines this new and attractive look. Even with setbacks and other requirements, it has the potential to detract from the amenity and value of the very substantial public and private investment made for the City’s re-build and recovery.</p>	
John Simpson/ #253.1		Support	Support retaining notified building height limit of 8m in Residential Hills Zone.	
John Simpson/253.1	Helen Broughton/ #FS2046.1	Support	Support retaining notified building height limit of 8m in Residential Hills Zone. For the impacted elevated residential zones in the port hills many houses were purchased for their physical position on their section and the elevated views from the house and section. If this policy change was applied to any area on the port hills this would allow development that could directly impact the central reason the current owners purchased their houses for. New developments could be built to a height that would either permanently impede or completely obstruct the view from the house behind the development. These views came at a cost for the current owners, and it would massively devalue any impacted properties that had developments constructed up to 12 meters which then cut off views and light. This is extremely unjust and should definitely not be allowed to occur in the rule changes.	Support
Kate Z/ #297.8		Seek Amendment	That resource consent to be required for buildings greater than two stories and all subdivisions.	
Alex Lowings/ #447.6		Oppose	No increase in the maximum building height in residential zones.	
Kem Wah Tan/ #471.8		Seek Amendment	Allow only a maximum of 2 stories buildings and less density per suburb.	
Anna McKenzie/ #1047.1		Support	Support the existing height rules in the Hills Suburbs.

Kāinga Ora – Homes and Communities / #834.44		Seek Amendment	14.8.1.1 P18 – Conversion to two residential units – Lyttelton Character Area. 1. Delete all new or extended character areas as qualifying matters and undertake further analysis to determine the exact values of the resources that the Council seeks to manage in the District Plan. 2. For existing character areas retain the controlled activity status for new buildings that exists in the Operative Plan - Rule 14.5.3.1.2 C1. 14.5.3.2.3 Building height – Character Area Overlays, and 14.5.3.2.5 – 14.5.3.2.14 Built form rules – Character Area Overlays. 3. In the event that the Character Area qualifying matter remains, explicit provision is sought for the ability to develop Papakāinga/Kāinga Nohoanga, noting that local Rūnanga have purchased the former Lyttelton West School Site.	
Kāinga Ora – Homes and Communities /834.44	Amy Beran/ #FS2030.15	Seek Amendment	14.8.1.1 P18 – Conversion to two residential units – Lyttelton Character Area.	Seek Amendment

			<p>1. Delete all new or extended character areas as qualifying matters and undertake further analysis to determine the exact values of the resources that the Council seeks to manage in the District Plan.</p> <p>2. For existing character areas retain the controlled activity status for new buildings that exists in the Operative Plan - Rule 14.5.3.1.2 C1. 14.5.3.2.3 Building height – Character Area Overlays, and 14.5.3.2.5 – 14.5.3.2.14 Built form rules – Character Area Overlays.</p> <p>3. In the event that the Character Area qualifying matter remains, explicit provision is sought for the ability to develop Papakāinga/Kāinga Nohoanga, noting that local Rūnanga have purchased the former Lyttelton West School Site.</p> <p>Kāinga Ora support, in principle, the management of character as a qualifying matter. However, Kāinga Ora does not consider appropriate justification has been provided for the proposed new or extended ‘character areas’ set out in PC13 and PC14 to demonstrate that they contain specific characteristics that make the level of development provided by the MDRS or policy 3 inappropriate in the area. Further, they blur the line between the protection of historic heritage values as set out under s6(f) of the RMA, and amenity values as set out under section 7 of the RMA. This is especially the case where both character and heritage area overlays apply to the same geographic area. Kāinga Ora questions the planning method and assessment undertaken to determine the proposed provisions. Kāinga Ora considers that any such provisions and values identified should be ‘managed’ rather than ‘protected’ in the District Plan. Kāinga Ora seeks the provisions as proposed are deleted and that further analysis is undertaken to determine the exact values of the resources that the Council seeks to manage in the District Plan.</p>

Kem Wah Tan/ #471.9		Seek Amendment	Allow only a maximum of 2 stories buildings and less density per suburb.	
Ian Cumberpatch Architects Ltd/ #2076.56		Seek Amendment	Amend subclause 14.8.3.2.2(a) to be 250m2	
Ian Cumberpatch Architects Ltd/2076.56	Kainga Ora - Homes and Communities/ #FS2099.68	Seek Amendment	Amend subclause 14.8.3.2.2(a) to be 250m2 This rule appears counter to the desired outcome of intensification, and is also contrary to the existing urban form within Lyttleton.	Oppose

Residential > Rules - Residential Banks Peninsula Zone > Built form standards > Building height

Submission Number	Further Submission No	Position	Decision Requested	FS Position
Atlas Quarter Residents Group (22 owners) / #224.5		Oppose	That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible.	
Atlas Quarter Residents Group (22 owners) /224.5	Kāinga Ora/ #FS2082.169	Oppose	<p>That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible.</p> <p>Who we are:</p> <p>This submission is made on behalf of the following persons, all of whom own units in the Atlas Quarter, 36 Welles Street, Christchurch Central:</p> <p>Richard Ball, Athena Ellis, Phil and Lynette Stenning, Max Lucas, Paul and Jeni Neilson, Jenny Jia and Zhongyang Yuan, Piers and Emma Bayley, Rachel and Tim Scanlan, Eileen and Vernon Payne, Bruce Fraser, Eléonore Dumaine, Peter and Faye Greenwood, Alan Steel, Gillian Smeith, Chelsea Kennedy, Deborah Bowker, Kate and Mike Peers, Peter Morris, Mathilde Vachon, Barbra Pullar, Martin Rumbold and Kirsty Stewart.</p> <p>Key points:</p> <p>We support well designed intensive residential and commercial development, integrated with sustainable transport options. We have already “put our money where our mouths are” by purchasing units in the Atlas Quarter, a large and successful inner-city development of 110 residential and three commercial units.</p> <p>We oppose the greatly increased height limits proposed by Plan Change 14. They are unnecessary and inappropriate for Christchurch.</p> <p>We support the inclusion of qualifying matters to enhance design quality and urban amenity across the City.</p> <p>Relief sought:</p> <ol style="list-style-type: none"> 1. That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible. 2. Where Government legislation and regulations require increases to height limits, that these are kept to the minimum extent possible for compliance with the regulations. 3. The need for greater intensification is supported but this does not require or justify the proposed increases in height limits as permitted activities. 4. The inclusion of the qualifying criteria is supported, independent of height limits, as a means of promoting good design and ensuring new buildings do not adversely impact existing buildings designed and constructed within the current District Plan requirements. <p>Reasons:</p> <p>Following the Christchurch earthquakes, a comprehensive design process was undertaken for the City, particularly for the central city. Deliberate and well-informed decisions were made create a liveable city, with intensified development in the central city and around suburban centres, but with lower central city height limits than previously existed. This has created a compact central city with increased densities compared to before the earthquakes, but without the height of some of the buildings that Christchurch had pre-earthquake . The consolidation has resulted in many vacant sites becoming available which are gradually being filled.</p> <p>This model was developed by looking at best practice around the world, combined with local input from residents and experts, to create an attractive and vibrant City. It set ambitious goals for increasing densities for residential living, especially in the central city and around suburban centres. It was fully integrated with future transport options and climate resilience objectives.</p> <p>It has widespread local support and was developed with considerable input and investment from Government (via CERA) and Christchurch City Council. It integrated land use and transport, seeking higher densities and more sustainable transport, as reflected in the Land Use Recovery Plan, Christchurch Central Recovery Plan and the Central City Transport Plan. It was embedded into the District Plan through an Independent Hearing Panel of experts hand-picked by the Government.</p> <p>The greatly increased height limits proposed Plan Change 14 undermines the objectives and principles that underpin the vision of the 2015 Christchurch Central Recovery Plan:</p> <p><i>“To become one of the best small cities in the world, Christchurch needs a city centre that is:</i></p> <ul style="list-style-type: none"> • <i>an inspiring place to live</i> • <i>an attractive place to invest</i> 	Oppose

			<ul style="list-style-type: none"> • <i>the best urban environment in New Zealand.</i>” <p>The decision to limit heights was a deliberate choice in achieving this vision. The proposed changes will undermine existing investments, entered into in good faith based on the Recovery Plans, while also reducing the central city’s design coherence and creating a less attractive City.</p> <p>The many empty sites and carparks that still exist post-earthquake provide adequate future capacity for the foreseeable future, including the “competitive margin” required by Government regulations. The only apparent reason for increasing the height limits appears to be compliance with new Government regulations. If the height limits are to be increased, this change should be done to the minimum extent needed to comply with these ill-considered Government requirements. There is no other justification for the proposed rules.</p> <p>The proposed rules allow new development to be concentrated in a small number of very tall buildings, with the negative impacts such as greater shading and wind tunnels, accompanied by a continuation of many empty and ugly lots in the central city. As the vacant sites are largely filled with cheap carparking, this further undermines the stated transport sustainability and climate resilience objectives.</p> <p>The scale of the buildings permitted under PC14 is not consistent with the extensive post-earthquake developments that have already occurred. The post-quake developments have created a very attractive City which will be undermined by these proposals. Existing intensive residential developments, such as the Atlas Quarter, could be overshadowed by new buildings of nearly twice the height on the east and west, blocking sunlight. Others may be blocked to the north.</p> <p>In short, the proposal for increased heights across the City are ill-considered solutions for problems that exist in Auckland, Wellington, and possibly other centres, but are not applicable to Christchurch. The geography and existing development of these other centres constrains new development. Post-earthquake Christchurch is quite different from these other centres: it is not constrained for growth opportunities, as demonstrated by the far slower growth in property prices over recent years. Even before the earthquakes, Christchurch had far more stable (less volatile) prices than Auckland and Wellington – a trend that has persisted since at least the 1970’s. In Christchurch there is housing choice, particularly with substantial increases in the number of higher density residential apartments.</p> <p>Maximising the benefits of intensification needs to consider the dis-benefits. The proposed Plan identifies loss of tree cover as a disbenefit but does appear to put sufficient emphasis on other matters. Why does it propose financial contributions for loss of tree cover but not for loss of sunlight to others, wind tunnel effects or loss of amenity? In the Christchurch context, the widespread demolition of much of the central city, including most of the taller buildings, and consolidation of activities into more compact precincts, has created a much more attractive City with a visual appearance and aesthetic appropriate for the size of the City, reflected in the Central City Recovery Plan issued by CERA after extensive public and expert engagement. Both residents and visitors are commenting on the attractiveness of this new look. Re-introducing unnecessarily large buildings undermines this new and attractive look. Even with setbacks and other requirements, it has the potential to detract from the amenity and value of the very substantial public and private investment made for the City’s re-build and recovery.</p>	
Kate Z/ #297.10		Seek Amendment	That resource consent to be required for buildings greater than two stories and all subdivisions.	
Alex Lowings/ #447.7		Oppose	No increase in the maximum building height in residential zones.	
Kem Wah Tan/ #471.10		Seek Amendment	Allow only a maximum of 2 stories buildings and less density per suburb.

Residential > Rules - Residential Banks Peninsula Zone > Built form standards > Daylight recession planes

Submission Number	Further Submission No	Position	Decision Requested	FS Position
Paul Wing/ #70.7		Seek Amendment	Seek amendment to ensure recession planes protect existing residential properties from negative impact of new multi-storey builds.	
Addington Neighbourhood Association / #205.22		Seek Amendment	Qualifying matters are needed to protect existing residents from losing their sunlight and warmth. Putting 2 & 3 story buildings next to some existing properties with solar panels could negate the usefulness of said panels through shading.	
Addington Neighbourhood Association /205.22	Kāinga Ora/ #FS2082.142	Seek Amendment	Qualifying matters are needed to protect existing residents from losing their sunlight and warmth. Putting 2 & 3 story buildings next to some existing properties with solar panels could negate the usefulness of said panels through shading. Qualifying matters are needed to protect existing residents from losing their sunlight and warmth. Putting 2 & 3 story buildings next to some existing properties with solar panels could negate the usefulness of said panels through shading.	Oppose
Addington Neighbourhood Association / #205.32		Support	Encourage intensification while considering the potential loss of amenity for existing house owners.	
Addington Neighbourhood Association /205.32	Kāinga Ora/ #FS2082.152	Support	Encourage intensification while considering the potential loss of amenity for existing house owners. Existing amenity should be protected at the same time as intensification is encouraged. Loss of sunlight and warmth from the sun on a property, through being overshadowed by a larger building being built next door, is akin to a seat being reclined by the passenger in front of you on a plane. There is a sense of loss of something you believed you were entitled to have. With a long term plan, people will know to consider the intensification potential of their neighbours' properties when they buy a property, They can vote with their feet, by buying in an area which has the right sunlight availability for them	Oppose
Steve Burns/ #276.6		Support	[Retain sunlight access provisions]	
Steve Hanson/ #454.7		Oppose	Opposes [height and height in relation to boundary rules] and [effects on] sunlight access.	
Beverley Nelson/ #469.10		Seek Amendment	Amend the Sunlight Access rule to [ensure more sunlight is available] to homes.	
Beverley Nelson/ #469.18		Seek Amendment	Amend the Sunlight Access rule to [ensure more sunlight is available] to homes.	
Te Hapū o Ngāti Wheke (Rāpaki) Rūnanga/ #695.15		Seek Amendment	Provide an additional exclusion clause for whereby land which is held as Māori Land is also excluded from complying with this rule.

Kāinga Ora questions the planning method and assessment undertaken to determine the proposed provisions. Kāinga Ora considers that any such provisions and values identified should be 'managed' rather than 'protected' in the District Plan. Kāinga Ora seeks the provisions as proposed are deleted and that further analysis is undertaken to determine the exact values of the resources that the Council seeks to manage in the District Plan.	
Kāinga Ora – Homes and Communities /834.46	Catholic Diocese of Christchurch/ #FS2044.40	Seek Amendment	<p>14.8.3.1.2 C3 – Newresidential unit to rear LytteltonCharacter Area.</p> <ol style="list-style-type: none"> 1. Delete all new or extended character areas as qualifying matters and undertake further analysis to determine the exact values of the resources that the Council seeks to manage in the District Plan. 2. For existing character areas retain the controlled activity status for new buildings that exists in the Operative Plan - Rule 14.5.3.1.2 C1. 14.5.3.2.3 Building height – Character Area Overlays, and 14.5.3.2.5 – 14.5.3.2.14 Built form rules – Character Area Overlays. 3. In the event that the Character Area qualifying matter remains, explicit provision is sought for the ability to develop Papakāinga/Kāinga Nohoanga, noting that local Rūnanga have purchased the former Lyttelton West School Site. <p>Kāinga Ora support, in principle, the management of character as a qualifying matter. However, Kāinga Ora does not consider appropriate justification has been provided for the proposed new or extended 'character areas' set out in PC13 and PC14 to demonstrate that they contain specific characteristics that make the level of development provided by the MDRS or policy 3 inappropriate in the area. Further, they blur the line between the protection of historic heritage values as set out under s6(f) of the RMA, and amenity values as set out under section 7 of the RMA. This is especially the case where both character and heritage area overlays apply to the same geographic area. Kāinga Ora questions the planning method and assessment undertaken to determine the proposed provisions. New Zealand Institute of Architects Canterbury Branch/ #762.27		Oppose	[Retain current site coverage limits].	
New Zealand Institute of Architects Canterbury Branch/762.27	Anne Dingwall/ #FS2037.792	Oppose	[Retain current site coverage limits]. We query the increase of minimum site area from 250 to 450m ² , introduction of rule b and reduction of site coverage from 60%-50% under rule 14.8.3.2.4 . These rules / changes significantly limit the existing development potential of this area and seems counter to intensification seen elsewhere in the proposed plan change, we propose that the current limits are retained. Graham Townsend/ #314.9		Seek Amendment	[Newbuilt form standards to require roofing colours with low reflectivity and]roof-runoff rainwater storage.	
Graham Townsend/314.9	Kāinga Ora/ #FS2082.270	Seek Amendment	[Newbuilt form standards to require roofing colours with low reflectivity and]roof-runoff rainwater storage. The current fashion for black or dark grey roofing will exacerbate the urban heat-island effect. In view of climbing global temperatures, it is therefore a form of collective self-harm. I do not know whether it falls within the Council's power to influence this fashion, but we should be using surfaces with a much higher albedo to reflect as much incoming solar radiation back into space as we can. Given the likelyramping up of la Nina/El Nino cyclicity and hence the likelihood of more severe droughts, new suburban housing should includemandatory roof-runoff rainwater storage.	Oppose

Atlas Quarter Residents Group (22 owners) / #224.6		Oppose	That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible.	
Atlas Quarter Residents Group (22 owners) /224.6	Kāinga Ora/ #FS2082.170	Oppose	<p>That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible.</p> <p>Who we are:</p> <p>This submission is made on behalf of the following persons, all of whom own units in the Atlas Quarter, 36 Welles Street, Christchurch Central:</p> <p>Richard Ball, Athena Ellis, Phil and Lynette Stenning, Max Lucas, Paul and Jeni Neilson, Jenny Jia and Zhongyang Yuan, Piers and Emma Bayley, Rachel and Tim Scanlan, Eileen and Vernon Payne, Bruce Fraser, Eléonore Dumaine, Peter and Faye Greenwood, Alan Steel, Gillian Smeith, Chelsea Kennedy, Deborah Bowker, Kate and Mike Peers, Peter Morris, Mathilde Vachon, Barbra Pullar, Martin Rumbold and Kirsty Stewart.</p> <p>Key points:</p> <p>We support well designed intensive residential and commercial development, integrated with sustainable transport options. We have already “put our money where our mouths are” by purchasing units in the Atlas Quarter, a large and successful inner-city development of 110 residential and three commercial units.</p> <p>We oppose the greatly increased height limits proposed by Plan Change 14. They are unnecessary and inappropriate for Christchurch.</p> <p>We support the inclusion of qualifying matters to enhance design quality and urban amenity across the City.</p> <p>Relief sought:</p> <ol style="list-style-type: none"> 1. That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible. 2. Where Government legislation and regulations require increases to height limits, that these are kept to the minimum extent possible for compliance with the regulations. 3. The need for greater intensification is supported but this does not require or justify the proposed increases in height limits as permitted activities. 4. The inclusion of the qualifying criteria is supported, independent of height limits, as a means of promoting good design and ensuring new buildings do not adversely impact existing buildings designed and constructed within the current District Plan requirements. <p>Reasons:</p> <p>Following the Christchurch earthquakes, a comprehensive design process was undertaken for the City, particularly for the central city. Deliberate and well-informed decisions were made create a liveable city, with intensified development in the central city and around suburban centres, but with lower central city height limits than previously existed. This has created a compact central city with increased densities compared to before the earthquakes, but without the height of some of the buildings that Christchurch had pre-earthquake . The consolidation has resulted in many vacant sites becoming available which are gradually being filled.</p>	Oppose

			<p>This model was developed by looking at best practice around the world, combined with local input from residents and experts, to create an attractive and vibrant City. It set ambitious goals for increasing densities for residential living, especially in the central city and around suburban centres. It was fully integrated with future transport options and climate resilience objectives.</p> <p>It has widespread local support and was developed with considerable input and investment from Government (via CERA) and Christchurch City Council. It integrated land use and transport, seeking higher densities and more sustainable transport, as reflected in the Land Use Recovery Plan, Christchurch Central Recovery Plan and the Central City Transport Plan. It was embedded into the District Plan through an Independent Hearing Panel of experts hand-picked by the Government.</p> <p>The greatly increased height limits proposed Plan Change 14 undermines the objectives and principles that underpin the vision of the 2015 Christchurch Central Recovery Plan:</p> <p><i>“To become one of the best small cities in the world, Christchurch needs a city centre that is:</i></p> <ul style="list-style-type: none"> <i>• an inspiring place to live</i> <i>• an attractive place to invest</i> <i>• the best urban environment in New Zealand.”</i> <p>The decision to limit heights was a deliberate choice in achieving this vision. The proposed changes will undermine existing investments, entered into in good faith based on the Recovery Plans, while also reducing the central city’s design coherence and creating a less attractive City.</p> <p>The many empty sites and carparks that still exist post-earthquake provide adequate future capacity for the foreseeable future, including the “competitive margin” required by Government regulations. The only apparent reason for increasing the height limits appears to be compliance with new Government regulations. If the height limits are to be increased, this change should be done to the minimum extent needed to comply with these ill-considered Government requirements. There is no other justification for the proposed rules.</p> <p>The proposed rules allow new development to be concentrated in a small number of very tall buildings, with the negative impacts such as greater shading and wind tunnels, accompanied by a continuation of many empty and ugly lots in the central city. As the vacant sites are largely filled with cheap carparking, this further undermines the stated transport sustainability and climate resilience objectives.</p> <p>The scale of the buildings permitted under PC14 is not consistent with the extensive post-earthquake developments that have already occurred. The post-quake developments have created a very attractive City which will be undermined by these proposals. Existing intensive residential developments, such as the Atlas Quarter, could be overshadowed by new buildings of nearly twice the height on the east and west, blocking sunlight. Others may be blocked to the north.</p> <p>In short, the proposal for increased heights across the City are ill-considered solutions for problems that exist in Auckland, Wellington, and possibly other centres, but are not applicable to Christchurch. The geography and existing development of these other centres constrains new development. Post-earthquake Christchurch is quite different from these other centres: it is not constrained for growth opportunities, as demonstrated by the far slower growth in property prices over recent years. Even before the earthquakes, Christchurch had far more stable (less volatile) prices than Auckland and Wellington – a trend that has persisted since at least the 1970’s. In Christchurch there is housing choice, particularly with substantial increases in the number of higher density residential apartments.</p> <p>Maximising the benefits of intensification needs to consider the dis-benefits. The proposed Plan identifies loss of tree cover as a disbenefit but does appear to put sufficient emphasis on other matters. Why does it propose financial contributions for loss of tree cover but not for loss of sunlight to others, wind tunnel effects or loss of amenity? In the Christchurch context, the widespread demolition of much of the central city, including most of the taller buildings, and consolidation of activities into more compact precincts, has created a much more attractive City with a visual appearance and aesthetic appropriate for the size of the City, reflected in the Central City Recovery Plan issued by CERA after extensive public and expert engagement. Both residents and visitors are commenting on the attractiveness of this new look. Re-introducing unnecessarily large buildings undermines this new and attractive look. Even with setbacks and other requirements, it has the potential to detract from the amenity and value of the very substantial public and private investment made for the City’s re-build and recovery.</p>

The tree canopy cover planting area may be combined with the landscaping area in whole or in part, may be located on any part of the development site, and does not have to be associated with each residential unit.</p> <p>Summerset provides an extensive amount of landscape treatment, including substantial tree planting, as part of its developments. The Plan contains specific assessment matters for retirement villages which include consideration of matters relating to site design, visual amenity and landscape treatment. These provisions further ensure that adequate landscaping and tree planting is incorporated into retirement village design.</p> <p>To avoid confusion associated with terminology and applicability of provisions, Summerset considers that the proposed tree canopy provisions relating to retirement villages are adequately provided for by other provisions in the Plan and requests that these be deleted. The requirements for non-residential activities, together with the retirement village specific assessment, would be sufficient to ensure landscape and tree provision.</p>	Oppose
James Harwood/ #571.21		Support	[S]eek[s] that the council retains the tree canopy requirement and contributions plan.

Atlas Quarter Residents Group (22 owners) / #224.7		Oppose	That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible.	
Atlas Quarter Residents Group (22 owners) /224.7	Kāinga Ora/ #FS2082.171	Oppose	<p>That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible.</p> <p>Who we are:</p> <p>This submission is made on behalf of the following persons, all of whom own units in the Atlas Quarter, 36 Welles Street, Christchurch Central:</p> <p>Richard Ball, Athena Ellis, Phil and Lynette Stenning, Max Lucas, Paul and Jeni Neilson, Jenny Jia and Zhongyang Yuan, Piers and Emma Bayley, Rachel and Tim Scanlan, Eileen and Vernon Payne, Bruce Fraser, Eléonore Dumaine, Peter and Faye Greenwood, Alan Steel, Gillian Smeith, Chelsea Kennedy, Deborah Bowker, Kate and Mike Peers, Peter Morris, Mathilde Vachon, Barbra Pullar, Martin Rumbold and Kirsty Stewart.</p> <p>Key points:</p> <p>We support well designed intensive residential and commercial development, integrated with sustainable transport options. We have already “put our money where our mouths are” by purchasing units in the Atlas Quarter, a large and successful inner-city development of 110 residential and three commercial units.</p> <p>We oppose the greatly increased height limits proposed by Plan Change 14. They are unnecessary and inappropriate for Christchurch.</p> <p>We support the inclusion of qualifying matters to enhance design quality and urban amenity across the City.</p> <p>Relief sought:</p> <ol style="list-style-type: none"> 1. That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible. 2. Where Government legislation and regulations require increases to height limits, that these are kept to the minimum extent possible for compliance with the regulations. 3. The need for greater intensification is supported but this does not require or justify the proposed increases in height limits as permitted activities. 4. The inclusion of the qualifying criteria is supported, independent of height limits, as a means of promoting good design and ensuring new buildings do not adversely impact existing buildings designed and constructed within the current District Plan requirements. <p>Reasons:</p> <p>Following the Christchurch earthquakes, a comprehensive design process was undertaken for the City, particularly for the central city. Deliberate and well-informed decisions were made create a liveable city, with intensified development in the central city and around suburban centres, but with lower central city height limits than</p>	Oppose

			<p>previously existed. This has created a compact central city with increased densities compared to before the earthquakes, but without the height of some of the buildings that Christchurch had pre-earthquake . The consolidation has resulted in many vacant sites becoming available which are gradually being filled.</p> <p>This model was developed by looking at best practice around the world, combined with local input from residents and experts, to create an attractive and vibrant City. It set ambitious goals for increasing densities for residential living, especially in the central city and around suburban centres. It was fully integrated with future transport options and climate resilience objectives.</p> <p>It has widespread local support and was developed with considerable input and investment from Government (via CERA) and Christchurch City Council. It integrated land use and transport, seeking higher densities and more sustainable transport, as reflected in the Land Use Recovery Plan, Christchurch Central Recovery Plan and the Central City Transport Plan. It was embedded into the District Plan through an Independent Hearing Panel of experts hand-picked by the Government.</p> <p>The greatly increased height limits proposed Plan Change 14 undermines the objectives and principles that underpin the vision of the 2015 Christchurch Central Recovery Plan:</p> <p><i>“To become one of the best small cities in the world, Christchurch needs a city centre that is:</i></p> <ul style="list-style-type: none"> • <i>an inspiring place to live</i> • <i>an attractive place to invest</i> • <i>the best urban environment in New Zealand.”</i> <p>The decision to limit heights was a deliberate choice in achieving this vision. The proposed changes will undermine existing investments, entered into in good faith based on the Recovery Plans, while also reducing the central city’s design coherence and creating a less attractive City.</p> <p>The many empty sites and carparks that still exist post-earthquake provide adequate future capacity for the foreseeable future, including the “competitive margin” required by Government regulations. The only apparent reason for increasing the height limits appears to be compliance with new Government regulations. If the height limits are to be increased, this change should be done to the minimum extent needed to comply with these ill-considered Government requirements. There is no other justification for the proposed rules.</p> <p>The proposed rules allow new development to be concentrated in a small number of very tall buildings, with the negative impacts such as greater shading and wind tunnels, accompanied by a continuation of many empty and ugly lots in the central city. As the vacant sites are largely filled with cheap carparking, this further undermines the stated transport sustainability and climate resilience objectives.</p> <p>The scale of the buildings permitted under PC14 is not consistent with the extensive post-earthquake developments that have already occurred. The post-quake developments have created a very attractive City which will be undermined by these proposals. Existing intensive residential developments, such as the Atlas Quarter, could be overshadowed by new buildings of nearly twice the height on the east and west, blocking sunlight. Others may be blocked to the north.</p> <p>In short, the proposal for increased heights across the City are ill-considered solutions for problems that exist in Auckland, Wellington, and possibly other centres, but are not applicable to Christchurch. The geography and existing development of these other centres constrains new development. Post-earthquake Christchurch is quite different from these other centres: it is not constrained for growth opportunities, as demonstrated by the far slower growth in property prices over recent years. Even before the earthquakes, Christchurch had far more stable (less volatile) prices than Auckland and Wellington – a trend that has persisted since at least the 1970’s. In Christchurch there is housing choice, particularly with substantial increases in the number of higher density residential apartments.</p> <p>Maximising the benefits of intensification needs to consider the dis-benefits. The proposed Plan identifies loss of tree cover as a disbenefit but does appear to put sufficient emphasis on other matters. Why does it propose financial contributions for loss of tree cover but not for loss of sunlight to others, wind tunnel effects or loss of amenity? In the Christchurch context, the widespread demolition of much of the central city, including most of the taller buildings, and consolidation of activities into more compact precincts, has created a much more attractive City with a visual appearance and aesthetic appropriate for the size of the City, reflected in the Central City Recovery Plan issued by CERA after extensive public and expert engagement. Both residents and visitors are commenting on the attractiveness of this new look. Re-introducing unnecessarily large buildings undermines this new and attractive look. Even with setbacks and other requirements, it has the potential to detract from the amenity and value of the very substantial public and private investment made for the City’s re-build and recovery.</p>	
Alex Lowings/ #447.9		Oppose	No increase in the maximum building height in residential zones.

			<p>The current fashion for black or dark grey roofing will exacerbate the urban heat-island effect. In view of climbing global temperatures, it is therefore a form of collective self-harm. I do not know whether it falls within the Council's power to influence this fashion, but we should be using surfaces with a much higher albedo to reflect as much incoming solar radiation back into space as we can.</p> <p>Given the likely ramping up of La Niña/El Niño cyclicity and hence the likelihood of more severe droughts, new suburban housing should include mandatory roof-runoff rainwater storage.</p>

The request is that Council as part of the PC14 submission and hearing process rezone the site from a combination of RuUF and Future Urban Zone (FUZ) to MDR. Outline Development Plan (ODP) identifies the areas proposed for rezoning with stormwater detention areas, greenways and associated areas not intended for residential development.	Support

			<p>This submission will</p> <ul style="list-style-type: none"> - provide for additional housing supply in a higher density capacity within the Greater Christchurch area which will contribute to additional land available for residential housing where the availability is low. - provide a well-connected residential development that would provide affordable housing choice - provide housing due to its proximity to Christchurch City and its close connection to public and active transport networks. The ODP which shows the design of the proposed development is attached as Appendix A. <p>The applicants are not opposed to considering a FUZ (zoning) if this was considered more acceptable in respect of a greenfield development.</p> <p>Further information is provided in the submission documentation.</p>	
Cashmere Park Ltd, Hartward Investment Trust and Robert Brown/ #593.5		Seek Amendment	<p>Rezone land at:</p> <p>126 Sparks Road (Lot 1 DP 412488) - Rural Urban Fringe to Medium Density</p> <p>17 Northaw Street (Lot 2 DP 412488) - Rural Urban Fringe to Medium Density</p> <p>36 Leistrella Road (Lot 3 DP 412488) - Rural Urban Fringe and Residential New Neighbourhood to Medium Density</p> <p>240 Cashmere Road (Lot 23 DP 3217) - Rural Urban Fringe and proposed Future Urban Zone, to Medium Density</p> <p>236 Cashmere Road (RS 41613) - Rural Urban Fringe and proposed Future Urban Zone, to Medium Density</p> <p>200 Cashmere Road (Lot 1 DP 547021) - Rural Urban Fringe and proposed Future Urban Zone, to Medium Density</p> <p>As show on Planning Map 45</p>	
Independent Producers Limited/ #729.3		Seek Amendment	The submitter requests that Council amend the zoning of 330, 250 and 232Styx Mill Road (Lot 4 DP 311370, Lot 5 DP311370, Lot 6 DP 311370) from RuralUrban Fringe to Future Urban Zone,without the Air Noise Contour overlay.	
Independent Producers Limited/729.3	Christchurch International Airport Limited/ #FS2052.119	Seek Amendment	The submitter requests that Council amend the zoning of 330, 250 and 232Styx Mill Road (Lot 4 DP 311370, Lot 5 DP311370, Lot 6 DP 311370) from RuralUrban Fringe to Future Urban Zone,without the Air Noise Contour overlay. The submitter seeks the rezoning of 330, 250 and 232 Styx Mill Road (Lot 4 DP 311370,Lot 5 DP 311370, Lot 6 DP 311370), shown on the existing DistrictPlanning Maps as being Rural Urban Fringe and located within the 50dB Ldn Air Noise Contour to be zoned Future Urban Zone.This rezoning is sought on the basis that the Airport Noise Contourshave been remodelled and have been used as a qualifying matter aspart of PC14 and that the contours will no longer be located on theseparcels of land. Retirement Villages Association of New Zealand Inc/811.57	Summerset Group Holdings Limited/ #FS2097.52	Seek Amendment	[S]eeks for clause b) of the standard to be amended to that it does not apply to boundaries adjoining open space and recreation zones, commercial and mixed use zones, and special	Support

			<p>purpose zones. The RVA seeks amendments so that height restrictions in relation to boundaries do not apply adjoining open space and recreation zones, commercial and mixed use zones, and special purpose zones. Similar considerations apply to these zones as to road boundaries, in that overlooking and amenity effects at these boundaries are likely to be minor at most. Including boundaries with these zones will provide further development possibilities with minimal adverse effects. Such exclusions should be integrated within the standard to reflect that some developments may occur adjacent to less sensitive zones.</p>	
Kāinga Ora – Homes and Communities / #834.236		Oppose	Delete the Future Urban Zone.	
Kāinga Ora – Homes and Communities /834.236	LMM Investments 2012 Limited/ #FS2049.156	Oppose	Delete the Future Urban Zone. FUZ are a mechanism for signalling rural areas that will be urbanised at some point in the future as a holding pattern, with the 'live' zone to be developed at a later date through a subsequent plan change process. RNN are existing well-established live zones (albeit that some of them are still being built out). These areas are sought to simply be MDRZ unless there is a qualifying matter in play that would preclude MDRZ zoning.	Support

Atlas Quarter Residents Group (22 owners) / #224.9		Oppose	That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible.	
Atlas Quarter Residents Group (22 owners) /224.9	Kāinga Ora/ #FS2082.173	Oppose	<p>That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible.</p> <p>Who we are:</p> <p>This submission is made on behalf of the following persons, all of whom own units in the Atlas Quarter, 36 Welles Street, Christchurch Central:</p> <p>Richard Ball, Athena Ellis, Phil and Lynette Stenning, Max Lucas, Paul and Jeni Neilson, Jenny Jia and Zhongyang Yuan, Piers and Emma Bayley, Rachel and Tim Scanlan, Eileen and Vernon Payne, Bruce Fraser, Eléonore Dumaine, Peter and Faye Greenwood, Alan Steel, Gillian Smeith, Chelsea Kennedy, Deborah Bowker, Kate and Mike Peers, Peter Morris, Mathilde Vachon, Barbra Pullar, Martin Rumbold and Kirsty Stewart.</p> <p>Key points:</p> <p>We support well designed intensive residential and commercial development, integrated with sustainable transport options. We have already “put our money where our mouths are” by purchasing units in the Atlas Quarter, a large and successful inner-city development of 110 residential and three commercial units.</p> <p>We oppose the greatly increased height limits proposed by Plan Change 14. They are unnecessary and inappropriate for Christchurch.</p> <p>We support the inclusion of qualifying matters to enhance design quality and urban amenity across the City.</p> <p>Relief sought:</p> <ol style="list-style-type: none"> 1. That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible. 2. Where Government legislation and regulations require increases to height limits, that these are kept to the minimum extent possible for compliance with the regulations. 3. The need for greater intensification is supported but this does not require or justify the proposed increases in height limits as permitted activities. 4. The inclusion of the qualifying criteria is supported, independent of height limits, as a means of promoting good design and ensuring new buildings do not adversely impact existing buildings designed and constructed within the current District Plan requirements. <p>Reasons:</p> <p>Following the Christchurch earthquakes, a comprehensive design process was undertaken for the City, particularly for the central city. Deliberate and well-informed decisions were made create a liveable city, with intensified development in the central city and around suburban centres, but with lower central city height limits than previously existed. This has created a compact central city with increased densities compared to before the earthquakes, but without the height of some of the buildings that Christchurch had pre-earthquake . The consolidation has resulted in many vacant sites becoming available which are gradually being filled.</p> <p>This model was developed by looking at best practice around the world, combined with local input from residents and experts, to create an attractive and vibrant City. It set ambitious goals for increasing densities for residential living, especially in the central city and around suburban centres. It was fully integrated with future transport options and climate resilience objectives.</p> <p>It has widespread local support and was developed with considerable input and investment from Government (via CERA) and Christchurch City Council. It integrated land use and transport, seeking higher densities and more sustainable transport, as reflected in the Land Use Recovery Plan, Christchurch Central Recovery Plan and the Central City Transport Plan. It was embedded into the District Plan through an Independent Hearing Panel of experts hand-picked by the Government.</p> <p>The greatly increased height limits proposed Plan Change 14 undermines the objectives and principles that underpin the vision of the 2015 Christchurch Central Recovery Plan:</p> <p><i>“To become one of the best small cities in the world, Christchurch needs a city centre that is:</i></p> <ul style="list-style-type: none"> • <i>an inspiring place to live</i> • <i>an attractive place to invest</i> 	Oppose

			<ul style="list-style-type: none"> • <i>the best urban environment in New Zealand.</i>” <p>The decision to limit heights was a deliberate choice in achieving this vision. The proposed changes will undermine existing investments, entered into in good faith based on the Recovery Plans, while also reducing the central city’s design coherence and creating a less attractive City.</p> <p>The many empty sites and carparks that still exist post-earthquake provide adequate future capacity for the foreseeable future, including the “competitive margin” required by Government regulations. The only apparent reason for increasing the height limits appears to be compliance with new Government regulations. If the height limits are to be increased, this change should be done to the minimum extent needed to comply with these ill-considered Government requirements. There is no other justification for the proposed rules.</p> <p>The proposed rules allow new development to be concentrated in a small number of very tall buildings, with the negative impacts such as greater shading and wind tunnels, accompanied by a continuation of many empty and ugly lots in the central city. As the vacant sites are largely filled with cheap carparking, this further undermines the stated transport sustainability and climate resilience objectives.</p> <p>The scale of the buildings permitted under PC14 is not consistent with the extensive post-earthquake developments that have already occurred. The post-quake developments have created a very attractive City which will be undermined by these proposals. Existing intensive residential developments, such as the Atlas Quarter, could be overshadowed by new buildings of nearly twice the height on the east and west, blocking sunlight. Others may be blocked to the north.</p> <p>In short, the proposal for increased heights across the City are ill-considered solutions for problems that exist in Auckland, Wellington, and possibly other centres, but are not applicable to Christchurch. The geography and existing development of these other centres constrains new development. Post-earthquake Christchurch is quite different from these other centres: it is not constrained for growth opportunities, as demonstrated by the far slower growth in property prices over recent years. Even before the earthquakes, Christchurch had far more stable (less volatile) prices than Auckland and Wellington – a trend that has persisted since at least the 1970’s. In Christchurch there is housing choice, particularly with substantial increases in the number of higher density residential apartments.</p> <p>Maximising the benefits of intensification needs to consider the dis-benefits. The proposed Plan identifies loss of tree cover as a disbenefit but does appear to put sufficient emphasis on other matters. Why does it propose financial contributions for loss of tree cover but not for loss of sunlight to others, wind tunnel effects or loss of amenity? In the Christchurch context, the widespread demolition of much of the central city, including most of the taller buildings, and consolidation of activities into more compact precincts, has created a much more attractive City with a visual appearance and aesthetic appropriate for the size of the City, reflected in the Central City Recovery Plan issued by CERA after extensive public and expert engagement. Both residents and visitors are commenting on the attractiveness of this new look. Re-introducing unnecessarily large buildings undermines this new and attractive look. Even with setbacks and other requirements, it has the potential to detract from the amenity and value of the very substantial public and private investment made for the City’s re-build and recovery.</p>

Addington Neighbourhood Association / #205.36		Support	Encourage intensification while considering the potential loss of amenity for existing house owners.	
Addington Neighbourhood Association /205.36	Kāinga Ora/ #FS2082.156	Support	Encourage intensification while considering the potential loss of amenity for existing house owners. Existing amenity should be protected at the same time as intensification is encouraged. Loss of sunlight and warmth from the sun on a property, through being overshadowed by a larger building being built next door, is akin to a seat being reclined by the passenger in front of you on a plane. There is a sense of loss of something you believed you were entitled to have. With a long term plan, people will know to consider the intensification potential of their neighbours' properties when they buy a property, they can vote with their feet, by buying in an area which has the right sunlight availability for them	Oppose

Summerset Group Holdings Limited/ #443.8		Seek Amendment	amend 14.12.2.7 as follows: d.For single and/or multi residential unit developments, excluding retirement villages a minimum tree canopy cover of 20% of the development site area must be provided in accordance with the Chapter 6.10A rules. The tree canopy cover planting area may be combined with the landscaping area in whole or in part, may be located on any part of the development site, and does not have to be associated with each residential unit.	
Summerset Group Holdings Limited/443.8	Kāinga Ora/ #FS2082.319	Seek Amendment	amend 14.12.2.7 as follows: d.For single and/or multi residential unit developments, excluding retirement villages a minimum tree canopy cover of 20% of the development site area must be provided in accordance with the Chapter 6.10A rules. The tree canopy cover planting area may be combined with the landscaping area in whole or in part, may be located on any part of the development site, and does not have to be associated with each residential unit.	Oppose

			<p>Summerset provides an extensive amount of landscape treatment, including substantial tree planting, as part of its developments. The Plan contains specific assessment matters for retirement villages which include consideration of matters relating to site design, visual amenity and landscape treatment. These provisions further ensure that adequate landscaping and tree planting is incorporated into retirement village design.</p> <p>To avoid confusion associated with terminology and applicability of provisions, Summerset considers that the proposed tree canopy provisions relating to retirement villages are adequately provided for by other provisions in the Plan and requests that these be deleted. The requirements for non-residential activities, together with the retirement village specific assessment, would be sufficient to ensure landscape and tree provision.</p>

Heather Woods/ #107.24		Seek Amendment	Amend 14.13 to enable Qualifying Sites to be located in ANY Residential Suburban zone, (not just the Residential Suburban Density Transition Zone).	
Cameron Matthews/ #121.10		Seek Amendment	Amend the Airport Noise Qualifying Matter to either: <ul style="list-style-type: none"> make all relevant activities within the Airport Noise Contour Restricted Discretionary, contingent on their meeting the indoor design sound levels already specified in the operative Christchurch District Plan 15, or, 	

			<ul style="list-style-type: none"> re-zone sites within the Airport Noise Contour to a Medium Residential Zone, High Residential Zone or any other zone that would otherwise apply, and amend those zone's rules to require any permitted activity within the Airport Noise Contour to meet the indoor design sound levels already specified in the operative Christchurch District Plan 	
Cameron Matthews/121.10	Christchurch International Airport Limited/ #FS2052.72	Seek Amendment	<p>Amend the Airport Noise Qualifying Matter to either:</p> <ul style="list-style-type: none"> make all relevant activities within the Airport Noise Contour Restricted Discretionary, contingent on their meeting the indoor design sound levels already specified in the operative Christchurch District Plan 15, or, re-zone sites within the Airport Noise Contour to a Medium Residential Zone, High Residential Zone or any other zone that would otherwise apply, and amend those zone's rules to require any permitted activity within the Airport Noise Contour to meet the indoor design sound levels already specified in the operative Christchurch District Plan <p>Aside from the option of limiting residential density in the affected area, inadequate assessment is given to any other means to "manage the specific characteristics" as required by NPS-UD [3.33], i.e., mitigate the sound exposure.</p> <p>In the current District Plan, the effects of aircraft noise are not managed via density restrictions affecting the baseline of the zone, but by ensuring dwellings at densities exceeding a zone's baseline are subject to indoor design sound level limits specified in Christchurch District Plan Appendix 14.16.4. Curiously, this existing mechanism does not protect residents from high sound exposure if their dwelling is compliant with the permitted activities within the operative Residential Suburban zone i.e., is low-density (2 dwellings per site, 8m / 2 storey building height limit), and could therefore be considered ineffective at present at protecting residents from high sound exposure. It does, however, limit the number of dwellings (to below MDRS standards), and therefore limits the number of residents in the affected area, likely reducing the 'reverse-sensitivity' effects on the airport.</p> <p>In either of the above cases, we could instead require "any bedroom to be designed and constructed to achieve an external to internal noise reduction of not less than 35 dB" or some other suitable fixed-attenuation, similar to residential activities within commercial and mixed-use zones [Proposed Housing and Business Choice Plan Change (PC14) Chapter 15 Commercial, 15.4.1.1 Permitted activities P12, P21; 15.5.1.1 Permitted activities P12, P21; 15.10.1.1 Permitted activities P27].</p> <p>Not only would either of these protect residents and users of all new occupied buildings from exposure to high sound levels without excessively limiting the density in the area, in-so-doing they would also limit the reverse-sensitivity effects on the airport. They would maintain some consistency with the current district plan but extend the protection from high sound exposure to residents of low-density dwellings. Sites within the ANC could then be zoned such that they were consistent with MDRS and NPS-UD, enabling greater housing capacity in an area of Riccarton/Fendalton which the TPG report highlights as central to the locations of feasible medium density development (refer to Figure 8 and Figure 9).</p>	Oppose

Vickie Hearnshaw/ #305.1		Seek Amendment	[S]upport[s] the idea of developing a new town plan. [Seeks more appropriate design outcomes for higher density housing]	
Vickie Hearnshaw/305.1	Anne Dingwall/ #FS2037.412	Seek Amendment	[S]upport[s] the idea of developing a new town plan. [Seeks more appropriate design outcomes for higher density housing] I do support the idea of developing a new town plan. What is most important, is to make sure that the over design is homogeneous. Most cities people generally admire and like to be in include Paris, Vienna and Berlin. This is because they have good access, but most importantly is the way the buildings are articulated i.e. beautifully proportioned. This is usually in relation to height, but also the design of detailing. This must include the size and placement of windows. Most recent higher density housing are very unattractive as they are built to the lowest standard. A flash of bright colour as a design feature, will not cut the mustard. Potentially they will become undesirable and future slums	Support

Victoria Neighbourhood Association (VNA) / #61.39		Seek Amendment	Introduce Diagram E for High Residential Zones to Appendix 14.15.2 which matches the current recession planes being proposed in Appendix 14.16.2 Diagram C.	
Victoria Neighbourhood Association (VNA) /61.39	Cambridge 137 Limited/ #FS2042.24	Seek Amendment	<p>Introduce Diagram E for High Residential Zones to Appendix 14.15.2 which matches the current recession planes being proposed in Appendix 14.16.2 Diagram C.</p> <p>In the absence of any site-specific S32 evaluation of impacts for this site, add a new Diagram E for this site which matches the current Plan recession planes being current Appendix 14.16.2 Diagram C (varying from 35 to 50 to 55 degrees, commencing 2.3m above the site boundary).</p> <p>Our preference remains to maintain the current Plan's lower recession plane requirements (current Appendix 14.16.2 Diagram C), given that many recently-constructed homes, post-earthquakes, in the HRZ area and elsewhere have been constructed based on the level of shading resulting from those setbacks. The effects on those new homes would be compromised for a very long time by even the revised recession planes. We have yet to see any evaluation within the section 32 report assessing those adverse effects relative to the current Plan.</p> <p>In subsection (a), recession planes are defined by Appendix 14.16.2 Diagram D from points 3m above boundary ground levels. Refer to our comments 2.2 under Issue 2, which apply to this issue also. Whilst we accept that what is proposed in PC14 is a compromise, we have yet to see a detailed evaluation of the proposed change relative to current planning requirements.</p>	Oppose

			<p>In subsection (b), recession planes would not apply where buildings are set back to the extent specified. We can see no reason why the recession plane rules should not apply to taller buildings which, even when setback back, would result in dramatically increased shading of neighbours. We have yet to see a detailed evaluation of the proposed change relative to current planning requirements.</p> <p>In subsection (c), this standard does not apply to the construction of 3 or more residential units along the first 20 metres of a side boundary measured from the road boundary, or 60% of the site depth, whichever is lesser. This could have a very significant adverse impact on neighbourhoods, for which we have not seen any comprehensive evaluation of effects.</p> <p>Our concern is that this exemption applied to one site could have enormous detrimental and threatening impact on direct neighbours, causing a domino effect of forcing neighbours from their property. A much more collaborative approach, which we would support, would be to allow such concessions on northern property boundaries only, or boundaries adjoining properties constructed to subsection (c) (see Appendix 14.15.2 diagram D), which would encourage the outcomes sought over time without intimidating current residents. We have yet to see a detailed evaluation of the proposed change relative to current planning requirements.</p> <p>Sunlight Access Qualifying Matter</p> <p>Generation Zero has asked that I oppose the Sunlight Access Qualifying Matter. I do not oppose this QM, and do strongly support it. The reason for supporting it is nothing to do with supporting existing property values, and everything to do with keeping housing more affordable, and helping to protect the physical and mental health of all residents, and of our environment. Sunlight is essential to these matters.</p> <p>I am disappointed that Generation Zero have not engage with residents who submitted to CCC on this matter, and are making and publishing incorrect assumptions about the motivations of those residents.</p> <p>As I have been unable to correct the standard form, I have not ticked those sections I disagree with, and make my comments here</p>

Bernard Hall JP (Retired) / #168.1	Anne Dingwall / #FS2037.226	Support	<p>Please retain RYAN STREET, CHRISTCHURCH, 8011 as a CHARACTER STREET without multistory infill structures.</p> <p>I have lived at 14 Ryan Street since March 1974. During this time the street has won street awards for its presentation as a community. Residents have mowed the berms and looked after its overall presentation. At one time tour buses would travel down the street so people could enjoy it. Residents were/are proud of the street. We raised 4 sons in our house. And have proudly looked after our gardens.</p> <p>I understand the trees are classified as Heritage Trees, unfortunately the contractor TreeTech is too casual.</p> <p>Sadly we were shocked to see 2 story infill housing under construction in the street and now live in fear that they may be built next door to us and destroy our life style what is left of it, I am 87 years old. I spent 35 years serving my community as a JP now retired.</p> <p>Needless to say we love Ryan Street classified as a Character Street.</p>	Support
Sonya Grace / #174.1		Support	Seek that Ryan Street becomes a Character Street and to not allow medium to high density housing into Ryan Street.	
Sean Walsh / #179.3		Seek Amendment	Request that Cashmere View Street (including #13 Cashmere View Street) Somerfield be a suburban character area/street. Request that resource consent be required before any development can proceed.	

Jean-Michel Gelin/ #247.2		Seek Amendment	Create a character area including Forfar Street to limit the possible height of the new building and the sunlight access for the 1 Storey houses of the street	
Jean-Michel Gelin/247.2	Anne Dingwall/ #FS2037.341	Seek Amendment	Create a character area including Forfar Street to limit the possible height of the new building and the sunlight access for the 1 Storey houses of the street the access to the sunlight is a big concern. I do not agree with the suppression of the recession plan on this purpose. the proposed changes on the recession plan angles and setback to get equivalent light as in Auckland is the minimum. I own a house 30 forfar street and the current building of a 8m building fully north of my property is considerably reducing the sunlight access. a building of 12m height would be catastrophic and will destroy the beautiful character of the neighbourhood	Support
Richmond Residents and Business Association (We are Richmond)/ #745.1		Support	Seek that SAMS and Suburban Character Areas are retained.	
Kāinga Ora – Homes and Communities / #834.43		Seek Amendment	14.15.27 Matters of discretion- Character Area Overlays. 1. Delete all new or extended character areas as qualifying matters and undertake further analysis to determine the exact values of the resources that the Council seeks to manage in the District Plan. 2. For existing character areas retain the controlled activity status for new buildings that exists in the Operative Plan - Rule 14.5.3.1.2 C1. 14.5.3.2.3 Building height – Character Area Overlays, and 14.5.3.2.5 – 14.5.3.2.14 Built form rules – Character Area Overlays. 3. In the event that the Character Area qualifying matter remains, explicit provision is sought for the ability to develop Papakāinga/Kāinga Nohoanga, noting that local Rūnanga have purchased the former Lyttelton West School Site.	
Kāinga Ora – Homes and Communities /834.43	Amy Beran/ #FS2030.14	Seek Amendment	14.15.27 Matters of discretion- Character Area Overlays. 1. Delete all new or extended character areas as qualifying matters and undertake further analysis to determine the exact values of the resources that the Council seeks to manage in the District Plan. 2. For existing character areas retain the controlled activity status for new buildings that exists in the Operative Plan - Rule 14.5.3.1.2 C1. 14.5.3.2.3 Building height – Character Area Overlays, and 14.5.3.2.5 – 14.5.3.2.14 Built form rules – Character Area Overlays. 3. In the event that the Character Area qualifying matter remains, explicit provision is sought for the ability to develop Papakāinga/Kāinga Nohoanga, noting that local Rūnanga have purchased the former Lyttelton West School Site. Kāinga Ora support, in principle, the management of character as a qualifying matter. However, Kāinga Ora does not consider appropriate justification has been provided for the proposed new or extended ‘character areas’ set out in PC13 and PC14 to demonstrate that they contain specific characteristics that make the level of development provided by the MDRS or policy 3 inappropriate in the area. Further, they blur the line between the protection of historic heritage values as set out under s6(f) of the RMA, and amenity values as set out under section 7 of the RMA. This is especially the case where both character and heritage area overlays apply to the same geographic area. Kāinga Ora questions the planning method and assessment undertaken to determine the proposed provisions. Kāinga Ora considers that any such provisions and values identified should be ‘managed’ rather than ‘protected’ in the District Plan. Kāinga Ora seeks the provisions as proposed are deleted and that further analysis is undertaken to determine the exact values of the resources that the Council seeks to manage in the District Plan.	Seek Amendment

Linda Blake/ #78.6		Support	Supports ways to reduce the months of no sun in Christchurch with 14.15.30 minimum building setbacks	
Marjorie Manthei/ #237.47		Seek Amendment	Consider ways to provide further protection from tall buildings in a residential neighbourhood, by rewriting and expanding the current list.	
Marjorie Manthei/237.47	Anne Dingwall/ #FS2037.336	Seek Amendment	<p>Consider ways to provide further protection from tall buildings in a residential neighbourhood, by rewriting and expanding the current list.</p> <p>I am concerned about the implications of 14.15.30 (a – c): The proposed height in HDRZ (allowing 20 – 32m) is greater than required, so the four matters of control/discretion need to provide more protection from taller buildings.</p> <ol style="list-style-type: none"> 1. Clause (a) will allow “height creep” and set precedents. Even one taller building would be used by the next applicant as a reason that another one should be approved. With only a few more, the ‘compatibility’ argument is lost. 2. Clause (b) ignores the effects of tall buildings on more than just the “neighbouring properties”—the impact would go much further. 3. Clause (c) is too open ended—“the extent to which an increased height is necessary to enable more efficient, cost effective and/or practical use of the site” is a catch-all that ignores what is effective/practical from residents’ perspective. It could be used as the basis for almost any application. 	Support

Submission Number	Further Submission No	Position	Decision Requested	FS Position
Doug Latham/ #30.12		Seek Amendment	Amend Appendix 14.16.2 'Recession planes' to increase recession planes in high density zone and reinstate previous exclusions.	
Thomas Calder/ #62.3		Not Stated	That sunlight access be better protected by amending the medium/high density southern boundary recession plane to 45 degrees from 3m at the boundary	
Melissa and Scott Alman/ #86.3		Seek Amendment	That sunlight access be better protected by further amending the medium/high density southern boundary recession plane from 50° to 45° from 3m at the boundary	
Nikki Smetham/ #112.9		Support	[Retain Sunlight Access Qualifying Matter]	
Tracey Strack/ #119.7		Seek Amendment	<ul style="list-style-type: none"> • That sunlight access be better protected by further amending the medium/high density southern boundary recession plane to 45° from 3m at the boundary: and, • That neighbours along the southern boundaries of any proposed developments that involve non-compliances with height or access to sunlight rules can be notified of the required resource consents and to make submissions. 	
Catherine & Peter Baddeley/ #165.4		Seek Amendment	That sunlight access be better protected by further amending the medium/high density southern boundary recession plane to 45° from 3m at the boundary	
Stantec/ #184.8		Support	Retain rule as proposed (Diagram D)	
Tom Logan/ #187.4		Oppose	[Drop the Sunlight Access Qualifying Matter]	
Tom Logan/187.4	Geoffrey Banks/ #FS2018.6	Oppose	<p>[Drop the Sunlight Access Qualifying Matter]</p> <p>The council's claim that 96% of housing capacity is retained under the Sunlight Access QM is misleading. CCC's Impact Assessment on the Sunlight Access QM only includes the effect on RS zones transitioning to MRZ. This ignores the impact on areas zoned as RMD that are transitioning to MRZ, or areas zoned HRZ. RMD and HRZ sites are more impacted by recession planes than RS, given they tend to be smaller. The example RS site, that is used to demonstrate the supposed loss in capacity, is 750 m². More than 50% of RMD sites and 2/3 of HRZ sites are less than 700 m². This means that the impact of applying recession planes is much more severe than for RS sites. Using an RS site as an example hides a much greater loss in housing capacity. We oppose the Sunlight Access QM on this basis, given it will result in a much greater loss in housing capacity than anticipated.</p> <p>the broad application of the Sunlight Access QM across the city is disappointing and counterproductive. This broad application contradicts the intention of the MDRS, which was to allow 3-storey, 3-unit development across all urban areas in New Zealand. We also believe that amenities other than sunlight should have been considered. NPS-UD Policy 6(b)(ii) states that the significant change to built form required "... may detract from amenity values appreciated by some people but improve amenity values appreciated by other people, communities, and future generations, including by providing increased and varied housing densities and type". This perspective should have been considered by the council when implementing the Sunlight Access QM. If increased sunlight access results in decreased housing affordability, as well as decreased access to employment, services, and amenities, is it really worth it?</p>	Oppose
Tom Logan/187.4	Anne Dingwall/ #FS2037.235	Oppose	<p>[Drop the Sunlight Access Qualifying Matter]</p> <p>The council's claim that 96% of housing capacity is retained under the Sunlight Access QM is misleading. Robert Black/ #246.5		Seek Amendment	Amend the recession planes to 40 degrees or less. Exclude Rule 5.4.1.3 from applying to recession planes under the MDRS.	
Robert Black/246.5	Kāinga Ora/ #FS2082.210	Seek Amendment	<p>Amend the recession planes to 40 degrees or less. Exclude Rule 5.4.1.3 from applying to recession planes under the MDRS.</p> <ul style="list-style-type: none"> I know that the CCC has introduced a city wide “access to sunlight” recession plane, which I am in full support of. However, I consider that it needs to go further than the current proposal. This is for two reasons: <ol style="list-style-type: none"> Recession plane on southern side (i.e. neighbour’s northern boundary) needs to allow more sunlight; and The issue of where floor level commences for the purpose of calculating recession planes needs to be considered. Firstly, the southern recession plane in the sections in this area this area previously was around 30 degrees. I appreciate that the Council has reduced the MDRS recession plane (60 degrees) to 50 degrees in light of Christchurch’s more limited access to sunlight, but I consider this should be 40 degrees or less to better protect homes access to sun. This is particularly relevant at a time where emphasis is put on “healthy homes” – access to sunlight (and the warmth and dryness it brings) should be protected. We have a large new home along our North built to 29 degrees (about 36 degrees for a large stairwell) Loss of sun in midwinter is particularly noticeable but acceptable 	Oppose

			<p>because it is only for a few weeks. Any more loss resulting from a 50 degree standard would most seriously affect our heating requirement and sunlight. If a new 50 degree build appeared in front of us (and fortunately that is very unlikely) we would have to move: Too cold , too damp. 50 degrees is simply not fair or equitable in Christchurch.</p> <ul style="list-style-type: none"> As outlined above in this submission, due to the flooding risk in this area, new builds are issued a minimum floor level that is significantly higher than the existing housing stock. Rule 5.4.1.3 of the District Plan includes an exemption for daylight recession planes in the Flood Management Area (FMA). My understanding of how that rule operates is that where the floor level of a new building is required to be high (due to being in the FMA and so at risk of flooding) the “floor level” for the purposes of the calculation of recession planes is taken to be the minimum floor level, not actual ground level. This rule is clearly advantageous to the new build (as it allows for more build height), but to the significant detriment of the neighbours, particularly, where those neighbours have an existing house at (or about) ground level. The rule was introduced by way of submission on the District Plan (rather than proposed by Council at the initial stage) which resulted in it slipping in fairly unopposed, with the effected public having no realistic chance of being aware of the change, or objecting. I have major concerns as to how this will play out with the new MDRS rules. There is no reference that I can see excluding the new height limits and recession rules from Rule 5.4.1.3. So, even though PC14 proposes reduced recession plane limits in Christchurch, how those reductions apply will be less in practice in FMA than in other areas of the city. 	
Stephen Bryant/ #258.5		Seek Amendment	Amend recession planes for Christchurch to ensure they meet the Australian standard.

John Bennett/ #367.1		Seek Amendment	That the recession plane angles be lowered to allow adequate sunlight into ground floor housing units on adjacent sites during mid winter.	
John Bennett/367.1	Anne Dingwall/ #FS2037.463	Seek Amendment	That the recession plane angles be lowered to allow adequate sunlight into ground floor housing units on adjacent sites during mid winter. I do not believe adequate consideration has been taken on the impact on residents that the resulting loss of sunlight will have on them and their site, despite the Council modifying the originally imposed conditions. The modified recession planes only put us at a point where we would get the same limited sunlight as Auckland. That should not have been seen as a target by the CCC. Whilst it recognises the different latitudes the cities have, it does not take account of Christchurch being a colder climate than Auckland and so sunlight into our houses in the middle of winter is so much more important and essential to the well being of Christchurch residents. Receiving no sunlight into ones ground floor unit for 3 months of the year proposed by the CCC is not acceptable as it will negatively effect the physical and mental health and well being of residents in the MDRS. Christchurch has significant mental health issues following the earthquakes and significantly reducing or even eliminating sunlight into existing and proposed new homes during winter is going to have profound effects on residents. Research has shown that sunlight is essential to ones health and wellbeing. Especially so in Winter.	Support

Ian McChesney/ #701.5		Seek Amendment	Reduce recession plane angles to provide more sunshine access than in Auckland.	
Ian McChesney/701.5	Anne Dingwall/ #FS2037.557	Seek Amendment	<p>Reduce recession plane angles to provide more sunshine access than in Auckland.</p> <p>Impact of sunlight reduction on liveability of homes: The proposed plans would significantly reduce sunlight access for many existing properties, with the result that many currently warm, healthy homes would no longer be so. first, the proposed variation to recession planes does not compensate sufficiently for reduced sunshine hours, solar strength and average wintertime temperatures in Christchurch, and second even if parity with Auckland was achieved the potential loss of sunlight represents an unacceptable diminution of sunlight access and warmth that residents should be reasonably allowed to enjoy. Effectively the Plan is giving a sunlight 'right' to an upper storey resident of a new multi-story development (where they are not affected by the shadow cast from a similar development to their north) at the expense of existing homeowners who may now find themselves fully in the shadow of a multi-story development built on their north boundary (for 5 months or so).</p> <p>These recession planes will also impact on the performance of existing solar panels on the roofs of single storey homes.</p> <p>Undermines protection and rights of existing property owners: Many current residents will have their property values (both amenity and financial) significantly reduced under the new recession planes and minimum plot sizes (e.g. loss of sunlight through ground floor windows, solar panel installations becoming severely compromised).</p>	Support

Ian McChesney/ #701.6		Seek Amendment	Recession plane angles should be reduced for those sites bordering single storey existing properties.	
Ian McChesney/701.6	Anne Dingwall/ #FS2037.558	Seek Amendment	<p>Recession plane angles should be reduced for those sites bordering single storey existing properties.</p> <p>Impact of sunlight reduction on liveability of homes: The proposed plans would significantly reduce sunlight access for many existing properties, with the result that many currently warm, healthy homes would no longer be so. first, the proposed variation to recession planes does not compensate sufficiently for reduced sunshine hours, solar strength and average wintertime temperatures in Christchurch, and second even if parity with Auckland was achieved the potential loss of sunlight represents an unacceptable diminution of sunlight access and warmth that residents should be reasonably allowed to enjoy. Effectively the Plan is giving a sunlight 'right' to an upper storey resident of a new multi-story development (where they are not affected by the shadow cast from a similar development to their north) at the expense of existing homeowners who may now find themselves fully in the shadow of a multi-story development built on their north boundary (for 5 months or so).</p> <p>These recession planes will also impact on the performance of existing solar panels on the roofs of single storey homes.</p> <p>Undermines protection and rights of existing property owners: Many current residents will have their property values (both amenity and financial) significantly reduced under the new recession planes and minimum plot sizes (e.g. loss of sunlight through ground floor windows, solar panel installations becoming severely compromised).</p>	Support
Ian McChesney/701.6	Anne Dingwall/ #FS2037.979	Seek Amendment	<p>Recession plane angles should be reduced for those sites bordering single storey existing properties.</p> <p>Impact of sunlight reduction on liveability of homes: The proposed plans would significantly reduce sunlight access for many existing properties, with the result that many currently warm, healthy homes would no longer be so. first, the proposed variation to recession planes does not compensate sufficiently for reduced sunshine hours, solar strength and average wintertime temperatures in Christchurch, and second even if parity with Auckland was achieved the potential loss of sunlight represents an unacceptable diminution of sunlight access and warmth that residents should be reasonably allowed to enjoy. Ian McChesney/ #701.7		Seek Amendment	[That] recession planes and setbacks [are] set to guarantee minimum sunshine access to adjoining properties, regardless of site width of those neighbouring properties.	
Ian McChesney/701.7	Anne Dingwall/ #FS2037.559	Seek Amendment	<p>[That] recession planes and setbacks [are] set to guarantee minimum sunshine access to adjoining properties, regardless of site width of those neighbouring properties.</p> <p>The proposed recession planes (and setbacks) do not provide equitable outcomes for sites that are smaller than the model assumptions. The proposal assumes 15m as a common site width, with the models for the sunlight access assuming the building on the southern boundary of a new development has a 4m setback from its north boundary (Technical Report – Residential Recession Planes in Christchurch, p.10). This report largely discounts narrower sites by stating “these are a minority”.</p> <p>But the reality is that sites narrower than 15m are not uncommon in the proposed HDRZ in Riccarton, where setbacks of the existing residences from the north boundary can be less than 4m. Thus the proposed recession planes will impact even more on these properties. Recession planes and setbacks need to provide liveable and equitable outcomes for sites regardless of dimensions.</p>	Support
Ian McChesney/701.7	Anne Dingwall/ #FS2037.980	Seek Amendment	<p>[That] recession planes and setbacks [are] set to guarantee minimum sunshine access to adjoining properties, regardless of site width of those neighbouring properties.</p> <p>The proposed recession planes (and setbacks) do not provide equitable outcomes for sites that are smaller than the model assumptions. Lauren Gibson/ #708.3		Seek Amendment	[Increase sunlight access]	
Girish Ramlugun/ #713.7		Oppose	Oppose the Sunlight Access Qualifying Matter and seek that the council drop this qualifying matter.	
Girish Ramlugun/713.7	Anne Dingwall/ #FS2037.568	Oppose	Oppose the Sunlight Access Qualifying Matter and seek that the council drop this qualifying matter. There are many cities in the Northern Hemisphere that are further away from the equator and have a higher level of housing intensification than Christchurch. With a mix of medium and high density housing, these cities are considered some of the most livable cities in the world. This qualifying matter would restrict medium density housing height and size in such a way that would create a less efficient usage of land and limit future housing.	Oppose
Sara Campbell/ #715.8		Oppose	Oppose the Sunlight Access Qualifying Matter and that the council remove this qualifying matter.	
Jonty Coulson/ #717.7		Oppose	Oppose the Sunlight Access Qualifying Matter and seek that the council drop this qualifying matter.

Mark Darbyshire/ #768.9		Seek Amendment	That consideration be given to incorporating some of the matters of discretion from 14.15.3.a or 14.15.3.c into 15.14.2.6 to ensure consented high-rise buildings in the city centre are sensitive to urban design principles and building dominance effects. That the Council allows buildings up to 90 metres high as proposed (with lower limits in certain areas as proposed). That requirements for green space, tree canopy, lanes, and mid-block pedestrian connections be strengthened.	
Mark Darbyshire/768.9	Brighton Observatory of Environment and Economics/ #FS2092.23	Seek Amendment	<p>That consideration be given to incorporating some of the matters of discretion from 14.15.3.a or 14.15.3.c into 15.14.2.6 to ensure consented high-rise buildings in the city centre are sensitive to urban design principles and building dominance effects. That the Council allows buildings up to 90 metres high as proposed (with lower limits in certain areas as proposed). That requirements for green space, tree canopy, lanes, and mid-block pedestrian connections be strengthened. I support the maximum number of storeys proposed for buildings in the city centre. However, I believe more power is needed for the Council to take urban design principles into account when assessing resource consent applications for new high-rise buildings, to ensure the buildings complement the surrounding neighbourhood and are consistent with the Council's and community's vision for that area. Many residents and owners would be alarmed if a 90-metre apartment building was allowed immediately next-door to the newly-built low-rise apartment developments in One Central, or if a 32-metre apartment building was allowed immediately next-door to Atlas Quarter. This could be quite jarring if not handled sensitively, and there might be more suitable land nearby, hence the need for urban design principles and building height or dominance to be taken into account when assessing resource consent applications. This could be achieved by taking some of the provisions from 14.15.3.a or 14.15.3.c and adding them to 15.14.2.6. Ultimately, however, using high-density housing to make the city centre more affordable, accessible, inclusive, diverse, and climate-friendly needs to be the priority. I consider myself very lucky to live in a modern, warm apartment in the city centre. Prices have gone up a lot in recent years, and many other people my age or younger could never even dream of living in the city centre. Our city centre needs to be accessible to diverse communities throughout Aotearoa, not just people who can already afford to live here. Ramping up the population of the city centre will also result in a vibrant hub where businesses and the arts can thrive, and turn around the depressing situation at present where lots of businesses are failing and hospitality menus are getting smaller and smaller. It has never made sense to me that</p>	Seek Amendment

			we would only allow low-rise buildings after the earthquakes, and I believe the time is now right for us to pivot towards a world-class city centre enabled by sensitive high-rise architecture transitioning progressively towards lower building heights the further you get from the centre. These won't get built overnight, but now is the right time to signal the type of architecture we want to move towards in the coming years and decades. Because of the current 17-metre height limit, Atlas Quarter is a very sprawling complex. Apartments are hard to find (especially for courier drivers) due to the number of different buildings and resulting complicated addressing system. The sprawling outdoor car park behind the complex results in a lot of break-ins. On wet days, I have to walk a long way through the rain to get from my apartment building to the street. I believe taller buildings would solve a lot of these problems in future developments, by allowing them to spread upwards instead of outwards and be contained within a single building. The requirements for green space, tree canopy, lanes, and mid-block pedestrian connections (whether on public or private land) should be strengthened. Where quake demolitions have allowed new, temporary mid-block pedestrian connections to be formed, serious consideration should be made to making these permanent. I love that I can walk from Atlas Quarter (36 Welles Street) to the bus interchange or Cathedral Square entirely by cutting through lanes. However, some of these lanes are only temporary, and one is currently closed due to a building site next-door. I would love to see this and other similar routes made permanent, making for a more pedestrian-friendly city.	
Dru Hill/ #774.1		Seek Amendment	Seek amendment to increase the Innovation Precinct to cover Central City South Frame, allow the exclusion of communal spaces from GLFA; and allow for a certain percentage of offices to be larger than 450m ² .

Orion New Zealand Limited (Orion)/ #854.1		Not Stated	Neighbourhood Centre Zone Rule 15.6.1.5 Non-complying activities.	Proposed amendment	Add an additional clause to NC3 a. and amend clause `d` as follows: <u>iii within 3m of the outside overhead conductor of any 11kV, 400V or 230V electricity distribution line.</u> d. <u>Conductive</u> Fences within 5 metres of a National Grid transmission line support structure foundation, 66kV or, 33kV, <u>11kv, 400V or 230V</u> electricity distribution line support structure foundation.		
Orion New Zealand Limited (Orion)/854.1	Kāinga Ora/ #FS2082.786	Not Stated	Neighbourhood Centre Zone Rule 15.6.1.5 Non-complying activities.	Proposed amendment	Add an additional clause to NC3 a. and amend clause `d` as follows: <u>iii within 3m of the outside overhead conductor of any 11kV, 400V or 230V electricity distribution line.</u> d. <u>Conductive</u> Fences within 5 metres of a National Grid transmission line support structure foundation, 66kV or, 33kV, <u>11kv, 400V or 230V</u> electricity distribution line support structure foundation.	Oppose	
			Orion proposes a new clause to provide setback clearances for the 11kV, 400V and 230V network. These lower voltage lines are the most common within any distribution network and comprise the majority of the lines that are seen in any residential street. The increased buildings height limits and smaller boundary setbacks enabled by the MDRS have the potential to cause significant issues for large parts of the lower voltage network.				
Lendlease Limited/ #855.4		Seek Amendment	Retain Chapter 15 as notified, except where specified in relation to the introduction of a new Metropolitan Centre Zone for Hornby.				
Lendlease Limited/855.4	Kāinga Ora/ #FS2082.789	Seek Amendment	Retain Chapter 15 as notified, except where specified in relation to the introduction of a new Metropolitan Centre Zone for Hornby.				Support
Lendlease Limited/ #855.34		Seek Amendment	Add a new set of rules under 15.4 for the Metropolitan Centre Zone in accordance with Schedule 2 of the submission and other suggested amendments to objectives and policies in the submission.				
Lendlease Limited/855.34	Vaughan Smith/ #FS2090.45	Seek Amendment	Add a new set of rules under 15.4 for the Metropolitan Centre Zone in accordance with Schedule 2 of the submission and other suggested amendments to objectives and policies in the submission. The submitter seeks that the Hornby Commercial Core is rezoned "Metropolitan Centre Zone", instead of Town Centre Zone. The proposed rules for the Metropolitan Centre Zone are appended to their submission as Schedule 2. In preparing the rules for the Metropolitan Centre Zone: • A full range of activities is provided for to reflect its role as servicing a sub-regional catchment.				Seek Amendment

			<ul style="list-style-type: none"> • The rules and activity specific standards are consistent with the approach taken for the City Centre Zone and Town Centre Zone. • To maintain the “primacy” of the City Centre Zone, a maximum permitted height of 45m is proposed, being half the permitted height of the City Centre Zone, and the same height as the City Centre Cathedral Square and Victoria Street Height Precincts. This additional height is required to encourage additional employment and residential options in the area, and the increased built form will increase foot traffic in the area, encouraging further retail activity and employment. 	
Keunah Kim/ #1018.2		Oppose	Retain existing current height in relation to boundary standards.	
Christchurch Casinos Limited / #2077.2		Support	[Supports] the intensification of urban form to provide for additional development capacity, particularly near the city and commercial centres, and supports any provisions or changes to the District Plan that will achieve this outcome;	
Christchurch Casinos Limited /2077.2	Kainga Ora - Homes and Communities/ #FS2099.73	Support	<p>[Supports] the intensification of urban form to provide for additional development capacity, particularly near the city and commercial centres, and supports any provisions or changes to the District Plan that will achieve this outcome; The submitter has an interest in the plan change as a whole and therefore this submission relates to all provisions and zonings of the plan change. The submitter has a specific interest in all provisions and zoning that relate to the site [73 Salisbury Street, 373 Durham Street North, and 51 Peterborough Street]. The submitter is a major Central City business, providing employment for over 260 people, and hosting over 1,400 guests on an average day. The submitter's business is an attraction that adds to the vibrancy and viability of the Central City, as many businesses are supported by the Casino. directly and indirectly, such as accommodation providers, local employment, local businesses, the hospitality and event sector, and so on. The land in question has been subject to a number of master planning exercises by the submitter since the Christchurch earthquakes of 2010/11.</p> <p>The mixture of commercial business and residential zoning has made this exercise challenging to the point that redevelopment has not been advanced with the land currently being used for car parking. Having a large Central City development block with two ‘firm’ commercial and residential zones within it has not been conducive to allowing the mix and distribution of residential and commercial activity across the site that is needed. This current zoning is directive of two development outcomes across the development block: one being residential and the other being commercial. The submitter has intentions to undertake a comprehensive redevelopment of the entire site, which would ideally comprise a mix of commercial and residential activities. The site is located on a prominent Central City corner site with frontage to a Central City local distributor road and a main distributor road. The character of the area is transitory between more commercial land uses to the south and residential areas to the north of Salisbury Street. Sites to the immediate south of the site are zoned City Centre Zone with sites to the south-east zoned Central City Mixed Use. An appropriate outcome for the submitter’s property would be to provide for a combination of housing and business uses and enabling greater building heights and densities. In this regard, Policy 3 of the NPS-UD is of direct relevance, whereby at sub clause (a) it directs that the district plan is to enable building heights and density of urban form to realise as much development capacity as possible, to maximise benefits of intensification in city centre zones. “Development Capacity” is a defined term in the NPS-UD and means the capacity of land to be developed for housing or for business use, based on the zoning, objectives, policies, rules, and overlays that apply in the relevant proposed and operative RMA planning documents; and the provision of adequate development infrastructure to support the development of land for housing or business use. Rezoning that part of the site that is proposed under PC14 to be High Density Residential, along with commensurate changes to the District Plan to provide for this submission and give effect to the NPS-UD, will: provide for an appropriate mixed-use development on the site, including commercial activity in an appropriate location, being a corner site adjacent to existing CCZ and opposite CCMU zoned land; provide greater scope for a development on the site to suitably emphasize the street corner; maintains support for the primacy of commercial centres, supporting the economic growth of the District, and therefore the economic well-being of communities; not have any discernible effects on the amenity of adjoining residential zones, or undermine the residential coherence of residential neighbourhoods; maintain a sufficient supply of housing in the district; contribute to the social and economic well-being of communities and meet the reasonably foreseeable needs of future generations; represent the most appropriate means of exercising the Council's functions, having regard to the efficiency and effectiveness of the provisions relative to other means; give effect to the NPS-UD (notably Policy 3) and Canterbury Regional Policy Statement; and promote the sustainable management of natural and physical resources, will be consistent with Part 2 of the Resource Management Act 1991 and ultimately achieve its purpose.</p>	Support
Christchurch Casinos Limited / #2077.4		Seek Amendment	[Seeks that] provisions [are] included to enable the range of matters outlined as follows that together assist with ensuring PC14 gives effects to the NPS-UD through intensifying development; increasing height limits in and around the central city, and in suburban centres; changes to rules within commercial zones to ensure high quality urban environments and be more enabling of activities without the need for resource consent; medium and high density residential zones with new rules are being introduced across all urban residential areas; rezoning of industrial areas near the central city for housing and mixed-use activities; introducing qualifying matters to reduce the scale and density of buildings enabled by the MDRS and NPS-UD is reduced; and amending objectives, policies, and other provisions throughout the District Plan.	
Christchurch Casinos Limited / #2077.9		Support	[Seeks to support] any other additional or consequential relief to the District Plan, including but not limited to, the maps, issues, objectives, policies, rules, controls/discretions, assessment criteria and explanations [of the commercial Central City Zone or such there of] that will give effect to the matters raised in this submission and the relevant planning legislation.

Tobias Meyer/ #55.17		Support	Supports Addington as a Local Centre	
Tobias Meyer/55.17	Christchurch International Airport Limited/ #FS2052.180	Support	Supports Addington as a Local Centre This is a very desirable place to live for young professionals. Very close to the city centre and other amenities.	Oppose
Tony Rider/ #74.1		Seek Amendment	Amend Bush Inn's status in the Centres hierarchy to remain a neighbourhood/local centre	
Tony Rider/74.1	Anne Dingwall/ #FS2037.153	Seek Amendment	<p>Amend Bush Inn's status in the Centres hierarchy to remain a neighbourhood/local centre</p> <p>The Bush Inn Centre is failing, with high rents, limited parking, and businesses finding success by moving elsewhere. People are more interested in open, modern malls like the successful Tower Junction and Northlink Shopping Centres. They cater for a wider range of shopping needs. The Bush Inn mall is very small and half empty, and has been rated mediocre by patrons.</p> <p>Lets compare Northlink to Bush Inn as an example. Using 2018 Census Data, Bush Inn and immediate surrounding areas (Fig 2) [Riccarton West, Wharenui, Upper Riccarton, Sockburn North, Ilam South, Ilam University, Deans Bush] has 23,031 people with 6981 occupied private dwellings in a 7.45KM2 area. This makes a density of 3091 people per KM2. Northlink is in Northlands (Fig 3), and when including immediately surrounding areas (Papanui East, Papanui West, Papanui North, Northcote) there are 10005 people in 3879 occupied private dwellings in a 4.86KM2 area. This is only 2058 people per KM2; more than a thousand less per KM2 when compared to Bush Inn and surrounding areas.</p> <p>This shows the Bush Inn / Church Corner area is more densely populated, larger in size, larger in population, and larger in housing – yet the so called "Town Centre Zone" is failing year by year. There has even been a reported 1338 increase in population between 2013 and 2018 for Bush Inn and surrounding areas, with the number of private dwellings becoming unoccupied also increasing (Fig 4). This is a notable increase of persons living in the same home – population increase and persons living in closer proximity, with the mall continuing to increase in vacant retail lots. Bush Inn Centre is not a Town Centre Zone</p>	Support
John Edilson/ #131.1		Oppose	Oppose the identification of Merivale as a large Local Centre, thereby allowing buildings of 6 levels high.	
Colin McGavin/ #140.1		Seek Amendment	That Papanui is designated a [Local Centre instead of a Town Centre]

Riccarton Bush - Kilmarnock Residents' Association/188.2	Vaughan Smith/ #FS2090.4	Seek Amendment	<p>That Riccarton be a Town Centre or Neighbourhood Centre, not a Large Town Centre.</p>	Oppose

			<p>Because it is immediately adjacent to the Christchurch CBD. Only Hagley Park separates the two centres. Placing a large town right next to a metropolitan centre is odd and inappropriate and, we submit, an accidental and unintended result of poor planning and poorly regulated urban development over a long period of time, at the expense of both Riccarton and the CBD. A Large Town Centre designation for Riccarton allows taller commercial buildings (up to 22 metres). This is inappropriate particularly where the TCZ butts hard against 2 and 3 storey housing zones just north of Riccarton Rd (Fig 3). If a city council priority is rejuvenating the central city, designating Riccarton a Large Town is a mistake. It will further draw residential and business activity away from the CBD. We submit large centres be some distance from the centre where they can support surrounding urban areas, complementing the city council's objectives, not working against them.</p> <p>The impact of a large town designation and wider boundaries, coupled with the centre destination for Church Corner to the west, will permit an almost continuous corridor of 6-storey residential densification all the way from the CBD to Curletts Road and Villa Maria College. We submit this is an absurd and unnecessary over-liberalisation of planning rules over a far too large area created unforeseen social impacts. It is within the city council's power to reconsider the Riccarton centre designations and make the commercial area smaller in order to encourage activity and growth where it needs to happen, in the city.</p>	
Stephen Bryant/ #258.2		Seek Amendment	Re-designate Merivale a Medium Town Centre.	
Scentre (New Zealand) Limited/ #260.1		Seek Amendment	Riccarton should be recognized as a Metropolitan Centre in the District Plan to be inline with the NPS-UD as opposed to a Town Centre.	
Scentre (New Zealand) Limited/260.1	Anne Dingwall/ #FS2037.351	Seek Amendment	<p>Riccarton should be recognized as a Metropolitan Centre in the District Plan to be inline with the NPS-UD as opposed to a Town Centre.</p> <p>Scentre considers that Riccarton qualifies as a Metropolitan Centre because of its sub-regional role in Christchurch and this should be recognised in the District Plan.</p> <p>In giving effect to the NPS-UD, the Council is required to intensify areas within and adjacent to particular types of centres, to a degree that is commensurate with the level of commercial activity and community facilities within them. As a result, PC14 provides for the realignment of the commercial centres framework in the District Plan to the framework of centres set out under the NPS-UD. Specifically, the NPS-UD provides that each individual centre should be identified as one of the following on a tiered basis: City Centre, Metropolitan Centre, Town Centre, Local Centre and Neighbourhood Centre. As a result, the focus of intensification begins with the City Centre and is made commensurate to each centre's role in the centre hierarchy.</p> <p>Scentre considers Riccarton meets the criteria for Metropolitan Centres in the NPS-UD, given its size, function and the catchment it serves. The definition of Metropolitan Centre is found in the National Planning Standards ("NPS"), being:</p> <p><i>"Areas used predominantly for a broad range of commercial, community, recreational and residential activities. The zone is a focal point for subregional urban catchments"</i></p> <p>It is appropriate for Riccarton to be identified as a Metropolitan Centre as that status recognises the centre's important role in the centres' hierarchy, anticipates and enables ongoing growth and intensification both within and adjacent to the centre, improvement of public transport services, and an increased height limit. This better gives effect to the NPS-UD and the Housing Supply Act by providing for further intensification in and around the centre.</p> <p>Riccarton is a substantial and diverse centre, with important roles in Christchurch's retail and hospitality sectors, business services, financial services, property services, administrative and support services, and health.</p> <p>Riccarton is at the next level in the commercial centres' hierarchy, below the CBD, and has a well-established sub-regional role, which is a key feature in the NPS definition. Riccarton's sub-regional role has been confirmed through ongoing research into the number and range of business units, the level of employment, and its contribution to the Christchurch economy (GDP), as well as through consumer research into both shopping patterns and the wider roles of centres. Importantly, the research shows Riccarton's steady development and growth, in line with underlying population and demand growth in its main service area, and across urban Christchurch (and hinterland).</p> <p>Riccarton's role as a Metropolitan Centre is directly consistent with other Metropolitan Centres throughout New Zealand's urban system, including Auckland, Hamilton, Wellington, and Tauranga.</p>	Oppose

Woolworths/ #740.6		Seek Amendment	Amend Table 15.1 to elevate the St Albans Centre from Neighbourhood to Local Centre (Small)	
Woolworths/740.6	Kāinga Ora/ #FS2082.488	Seek Amendment	Amend Table 15.1 to elevate the St Albans Centre from Neighbourhood to Local Centre (Small) The increased density of residential development enabled through PC14 should be accompanied by increased opportunities in centres (and edge of centres) to accommodate additional services that will be required. In that context, it is appropriate to extend the zoning of specified centres to ensure that they are better able to accommodate the services that will be required in the future. The role of St Albans Centre should be elevated in the hierarchy of Centres from Neighbourhood Centre Zone (St Albans) to Local Centre (St Albans) in recognition of the extent of residential intensification that has occurred in its catchment since 2012, as enabled by PC14, and the Council's inability to account for the Hardie and Thomson built form constraints associated with the 3,451m ² of Local Centre at 1062 Colombo Street which disables commercial redevelopment to provide for community wellbeing in this area. Regardless the permitted extent of commercial floorspace provided for the St Albans centre exceeds the 3,000m ² GFA capacity constraint identified in Policy 15.2.1 Table 15.1 as appropriate to Neighbourhood Centres.	Support
Christchurch City Council/ #751.88		Seek Amendment	Remove the passage "(above ground floor level)" from Row C in Table 15.1 under Policy 15.2.2.1.

			<p>Amend to insert the term "walkable" as follows: "Objective 15.2.3 – mixed use zones located close to the City Centre Zone transition into high density walkable residential neighbourhoods that contribute to an improved diversity of housing type, tenure and affordability and support a reduction in greenhouse gas emissions"</p> <p>The basis for rezoning this area is because it falls within the walking catchment of the city centre zone and large local centre zone (NPSUD Policy 3), however the existing urban environment does not currently support walking as a preferred mode due to a combination of factors including existing uses, large block sizes and lack of attractive, direct connections. Reference to walkability in this objective is appropriate given the context to the rezoning under the NPSUD, the area's accessible location, the type of investment needed and because it more appropriately expresses the outcome that many of the supporting provisions seek to achieve (e.g. creation of smaller urban blocks and land use and transport integration that facilitates low carbon travel).</p>	
Retirement Villages Association of New Zealand Inc/ #811.78		Support	Retain Objective 15.2.3 as notified.

Kāinga Ora – Homes and Communities / #834.241		Seek Amendment	Amend the objective as follows: 15.1.1 Objective - Office parks and mixed use areas outside the central city (except the Central City Mixed Use and Central City Mixed Use (South) Zones). a. Recognise the existing nature, scale and extent of commercial activity within the Commercial Office and Commercial Mixed Use Zones, but avoid the expansion of existing, or the development of new office parks and/or mixed use areas . b. Mixed use zones located within a 15min walking distance of close to the City Centre Zone transition into high density residential neighbourhoods that contribute to an improved diversity of housing type, tenure and affordability and support a reduction in greenhouse gas emissions .	
Kāinga Ora – Homes and Communities /834.241	ChristchurchNZ/ #FS2048.2	Seek Amendment	Amend the objective as follows: 15.1.1 Objective - Office parks and mixed use areas outside the central city (except the Central City Mixed Use and Central City Mixed Use (South) Zones). a. Recognise the existing nature, scale and extent of commercial activity within the Commercial Office and Commercial Mixed Use Zones, but avoid the expansion of existing, or the development of new office parks and/or mixed use areas . b. Mixed use zones located within a 15min walking distance of close to the City Centre Zone transition into high density residential neighbourhoods that contribute to an improved diversity of housing type, tenure and affordability and support a reduction in greenhouse gas emissions . Kāinga Ora support the principle of providing for Mixed Use Zones proximate to the City Centre Zone to transition to higher density residential neighbourhoods. The application of the provision is unclear however. The 'Objective Heading' refers to mixed use outside the central city. Central City is defined (in the operative Plan) as that part of the City contained within the four avenues. Whereas the amendment to Chapter 2 Interpretation to introduce 'City Centre – means the City Centre Zone'. This confusion is then reinforced in Policy 15.2.3.2 where the 'heading' references Mixed Use Zones outside the central city, then conflicts with (b) which references increased opportunities within a 15 minute walking distance of the City Centre Zone (which would therefore include the Commercial Central City Mixed Use and Central City Mixed Use (South Frame) zones). If the aim is to deliberately exclude the Central City Mixed Use and South Frame Zones, this should be made clear, and Policy 15.2.7.1 'Diversity of Activities' amended to encourage a transition into good quality residential neighbourhoods. 'Close' should be replaced by explicit reference to the respective zones (presumed to be the 15-minute walking distance in Policy 15.2.3.2(b)). Referencing a reduction in greenhouse gas emissions is superfluous in this context, given proximity and modal choice.	Oppose

Kāinga Ora – Homes and Communities / #834.242		Seek Amendment	Amend as follows:(a) 15.2.3.2 Policy – Mixed use areas outside the central city (except the Central City Mixed Use and Central City Mixed Use(South) Zones) a. Recognise the existing nature, scale and extent of retail activities and offices in mixed use zones outside the central city in Addington, New Brighton, off Mandeville Street and adjoining Blenheim Road , while limiting their future growth and development to ensure commercial activity in the City is focussed within the network of commercial centres. b. Support mixed use zones at Sydenham, Addington, off Mandeville Street, and Philipstown located within a 15 minute walking distance of the City Centre Zone , to transition into high good quality residential neighbourhoods by: i. enabling comprehensively designed high good-quality, high-density residential activity; ii. ensuring that the location, form and layout of residential developments supports the objective of reducing greenhouse gas emissions and provides for greater housing diversity including alternative housing models; iii. requiring developments to achieve a high good standard of on-site residential amenity to offset and improve the current low amenity industrial environment and mitigate potential conflicts between uses; iv. encourage small-scale building conversions to residential use where they support sustainable re-use and provide high good quality living space. and contribute to the visual interest of the area. [Delete c. and d.]	
Kāinga Ora – Homes and Communities /834.242	ChristchurchNZ/ #FS2048.4	Seek Amendment	Amend as follows:(a) 15.2.3.2 Policy – Mixed use areas outside the central city (except the Central City Mixed Use and Central City Mixed Use(South) Zones) a. Recognise the existing nature, scale and extent of retail activities and offices in mixed use zones outside the central city in Addington, New Brighton, off Mandeville Street and adjoining Blenheim Road , while limiting their future growth and development to ensure commercial activity in the City is focussed within the network of commercial centres. b. Support mixed use zones at Sydenham, Addington, off Mandeville Street, and Philipstown located within a 15 minute walking distance of the City Centre Zone , to transition into high good quality residential neighbourhoods by: i. enabling comprehensively designed high good-quality, high-density residential activity; ii. ensuring that the location, form and layout of residential developments supports the objective of reducing greenhouse gas emissions and provides for greater housing diversity including alternative housing models; iii. requiring developments to achieve a high good standard of on-site residential amenity to offset and improve the current low amenity industrial environment and mitigate potential conflicts between uses; iv. encourage small-scale building conversions to residential use where they support sustainable re-use and provide high good quality living space. and contribute to the visual interest of the area. [Delete c. and d.] A ‘high quality’ residential neighbourhood is subjective and is referenced in terms of residential zone outcomes (Objective 14.2.4). Such is an inappropriately high threshold for residential development in a transitioning and Mixed Use zone. Contributing positively to quality and design is sufficient. Delete reference to ‘reducing greenhouse gas emissions’ as this would be immaterial at this scale, and the areas are zoned for mixed use which anticipates residential activity being proximate to necessary facilities/ employment thereby reducing trip journeys. Support for greater housing diversity and including ‘alternative housing models’ although noting that these are not well defined (Chapter 2 Interpretation). The greenway requirements in Appendix 15.15.12 and 15.15.13 are problematic to implement given the fragmented ownership of these areas. The provision of small parks and greenlinks is a matter for Council to facilitate through LGA processes and a more comprehensive place-making programme that will be vital in supporting a shift from industrial to mixed use neighbourhoods. If specific greenlinks are considered to be vital then the Council should use its designation powers to secure these spaces as a more efficient and effective method than the proposed comprehensive housing rules. Retirement Villages Association of New Zealand Inc/ #811.81		Seek Amendment	[S]eeks to amend Policy 15.2.4.2 to reflect the NPSUD and to remove provisions that unduly restrict the development of a diversity of housing typologies, including retirement villages.	
Retirement Villages Association of New Zealand Inc/811.81	Summerset Group Holdings Limited/ #FS2097.75	Seek Amendment	[S]eeks to amend Policy 15.2.4.2 to reflect the NPSUD and to remove provisions that unduly restrict the development of a diversity of housing typologies, including retirement villages. While the RVA acknowledges the importance of well-designed developments, it considers that Policy 15.2.4.2's provisions are overly restrictive and should be redrafted to better provide for a range of housing typologies.	Support

			<p>In particular, the RVA is concerned with the new proposed requirement for new development to embody a “human scale and fine grain”. These requirements have a degree of subjectivity and do not acknowledge the unique functional and operational requirements of retirement villages and restricts the ability to provide a diversity of housing typologies.</p> <p>In addition, the RVA considers other building design requirements, such as the requirement for the design of development to mitigate potential adverse effects such as “heat islands”, “heat reflection or refraction” and “wind-related effects”, over-regulate development by going beyond the policy directives of the NPS-UD and the Enabling Housing Act.</p>

Cameron Matthews/ #121.11		Seek Amendment	Amend the Airport Noise Qualifying Matter to either: <ul style="list-style-type: none"> make all relevant activities within the Airport Noise Contour Restricted Discretionary, contingent on their meeting the indoor design sound levels already specified in the operative Christchurch District Plan 15, or, re-zone sites within the Airport Noise Contour to a Medium Residential Zone, High Residential Zone or any other zone that would otherwise apply, and amend those zone's rules to require any permitted activity within the Airport Noise Contour to meet the indoor design sound levels already specified in the operative Christchurch District Plan 	

Cameron Matthews/121.11	Christchurch International Airport Limited/ #FS2052.73	Seek Amendment	<p>Amend the Airport Noise Qualifying Matter to either:</p> <ul style="list-style-type: none"> • make all relevant activities within the Airport Noise Contour Restricted Discretionary, contingent on their meeting the indoor design sound levels already specified in the operative Christchurch District Plan 15, or, • re-zone sites within the Airport Noise Contour to a Medium Residential Zone, High Residential Zone or any other zone that would otherwise apply, and amend those zone’s rules to require any permitted activity within the Airport Noise Contour to meet the indoor design sound levels already specified in the operative Christchurch District Plan <p>Aside from the option of limiting residential density in the affected area, inadequate assessment is given to any other means to “manage the specific characteristics” as required by NPS-UD [3.33], i.e., mitigate the sound exposure.</p> <p>In the current District Plan, the effects of aircraft noise are not managed via density restrictions affecting the baseline of the zone, but by ensuring dwellings at densities exceeding a zone’s baseline are subject to indoor design sound level limits specified in Christchurch District Plan Appendix 14.16.4. Curiously, this existing mechanism does not protect residents from high sound exposure if their dwelling is compliant with the permitted activities within the operative Residential Suburban zone i.e., is low-density (2 dwellings per site, 8m / 2 storey building height limit), and could therefore be considered ineffective at present at protecting residents from high sound exposure. It does, however, limit the number of dwellings (to below MDRS standards), and therefore limits the number of residents in the affected area, likely reducing the ‘reverse-sensitivity’ effects on the airport.</p> <p>In either of the above cases, we could instead require “any bedroom to be designed and constructed to achieve an external to internal noise reduction of not less than 35 dB” or some other suitable fixed-attenuation, similar to residential activities within commercial and mixed-use zones [Proposed Housing and Business Choice Plan Change (PC14) Chapter 15 Commercial, 15.4.1.1 Permitted activities P12, P21; 15.5.1.1 Permitted activities P12, P21; 15.10.1.1 Permitted activities P27].</p> <p>Not only would either of these protect residents and users of all new occupied buildings from exposure to high sound levels without excessively limiting the density in the area, in-so-doing they would also limit the reverse-sensitivity effects on the airport. They would maintain some consistency with the current district plan but extend the protection from high sound exposure to residents of low-density dwellings. Sites within the ANC could then be zoned such that they were consistent with MDRS and NPS-UD, enabling greater housing capacity in an area of Riccarton/Fendalton which the TPG report highlights as central to the locations of feasible medium density development (refer to Figure 8 and Figure 9).</p>	Oppose

Rosemary Fraser/ #26.3		Seek Amendment	Opposes change to height limits and having buildings 90m tall. Make sure that wind and winter conditions are taken into consideration when considering building height controls	
Rosemary Fraser/26.3	Cambridge 137 Limited/ #FS2042.3	Seek Amendment	Opposes change to height limits and having buildings 90m tall. Make sure that wind and winter conditions are taken into consideration when considering building height controls Wind tunnels occur between taller buildings as happens on Colombo Street between the library and Te Pai. As Christchurch experiences strong winds and is flat, it could create dangerous situations if there are tall buildings on both side of street. Even with appropriate foundations they would still sway terrifying people on the higher floors. Also, the taller the building the more difficult it would be to escape if there was a fire. Also, with increased shading, there is likely to be for ice on paths for longer in winter.	Oppose
Rosemary Fraser/26.3	Kāinga Ora/ #FS2082.7	Seek Amendment	Opposes change to height limits and having buildings 90m tall. Make sure that wind and winter conditions are taken into consideration when considering building height controls	Oppose

			<p>Wind tunnels occur between taller buildings as happens on Colombo Street between the library and Te Pai. As Christchurch experiences strong winds and is flat, it could create dangerous situations if there are tall buildings on both side of street.</p> <p>Even with appropriate foundations they would still sway terrifying people on the higher floors. Also, the taller the building the more difficult it would be to escape if there was a fire. Also, with increased shading, there is likely to be for ice on paths for longer in winter.</p>	
Paul McNoe/ #171.7		Seek Amendment	[Reduce permitted building height] That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible	
Logan Brunner/ #191.10		Support	[Retain increased building height]	
Atlas Quarter Residents Group (22 owners) / #224.10		Oppose	That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible.	
Atlas Quarter Residents Group (22 owners) /224.10	Kāinga Ora/ #FS2082.174	Oppose	<p>That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible.</p> <p>Who we are:</p> <p>This submission is made on behalf of the following persons, all of whom own units in the Atlas Quarter, 36 Welles Street, Christchurch Central:</p> <p>Richard Ball, Athena Ellis, Phil and Lynette Stenning, Max Lucas, Paul and Jeni Neilson, Jenny Jia and Zhongyang Yuan, Piers and Emma Bayley, Rachel and Tim Scanlan, Eileen and Vernon Payne, Bruce Fraser, Eléonore Dumaine, Peter and Faye Greenwood, Alan Steel, Gillian Smeith, Chelsea Kennedy, Deborah Bowker, Kate and Mike Peers, Peter Morris, Mathilde Vachon, Barbra Pullar, Martin Rumbold and Kirsty Stewart.</p> <p>Key points:</p> <p>We support well designed intensive residential and commercial development, integrated with sustainable transport options. We have already “put our money where our mouths are” by purchasing units in the Atlas Quarter, a large and successful inner-city development of 110 residential and three commercial units.</p> <p>We oppose the greatly increased height limits proposed by Plan Change 14. They are unnecessary and inappropriate for Christchurch.</p> <p>We support the inclusion of qualifying matters to enhance design quality and urban amenity across the City.</p> <p>Relief sought:</p> <ol style="list-style-type: none"> 1. That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible. 2. Where Government legislation and regulations require increases to height limits, that these are kept to the minimum extent possible for compliance with the regulations. 3. The need for greater intensification is supported but this does not require or justify the proposed increases in height limits as permitted activities. 4. The inclusion of the qualifying criteria is supported, independent of height limits, as a means of promoting good design and ensuring new buildings do not adversely impact existing buildings designed and constructed within the current District Plan requirements. <p>Reasons:</p> <p>Following the Christchurch earthquakes, a comprehensive design process was undertaken for the City, particularly for the central city. Deliberate and well-informed decisions were made create a liveable city, with intensified development in the central city and around suburban centres, but with lower central city height limits than previously existed. This has created a compact central city with increased densities compared to before the earthquakes, but without the height of some of the buildings that Christchurch had pre-earthquake . The consolidation has resulted in many vacant sites becoming available which are gradually being filled.</p> <p>This model was developed by looking at best practice around the world, combined with local input from residents and experts, to create an attractive and vibrant City. It set ambitious goals for increasing densities for residential living, especially in the central city and around suburban centres. It was fully integrated with future transport options and climate resilience objectives.</p> <p>It has widespread local support and was developed with considerable input and investment from Government (via CERA) and Christchurch City Council. It integrated land use and transport, seeking higher densities and more sustainable transport, as reflected in the Land Use Recovery Plan, Christchurch</p>	Oppose

			<p>Central Recovery Plan and the Central City Transport Plan. It was embedded into the District Plan through an Independent Hearing Panel of experts hand-picked by the Government.</p> <p>The greatly increased height limits proposed Plan Change 14 undermines the objectives and principles that underpin the vision of the 2015 Christchurch Central Recovery Plan:</p> <p><i>“To become one of the best small cities in the world, Christchurch needs a city centre that is:</i></p> <ul style="list-style-type: none"> • <i>an inspiring place to live</i> • <i>an attractive place to invest</i> • <i>the best urban environment in New Zealand.”</i> <p>The decision to limit heights was a deliberate choice in achieving this vision. The proposed changes will undermine existing investments, entered into in good faith based on the Recovery Plans, while also reducing the central city’s design coherence and creating a less attractive City.</p> <p>The many empty sites and carparks that still exist post-earthquake provide adequate future capacity for the foreseeable future, including the “competitive margin” required by Government regulations. The only apparent reason for increasing the height limits appears to be compliance with new Government regulations. If the height limits are to be increased, this change should be done to the minimum extent needed to comply with these ill-considered Government requirements. There is no other justification for the proposed rules.</p> <p>The proposed rules allow new development to be concentrated in a small number of very tall buildings, with the negative impacts such as greater shading and wind tunnels, accompanied by a continuation of many empty and ugly lots in the central city. As the vacant sites are largely filled with cheap carparking, this further undermines the stated transport sustainability and climate resilience objectives.</p> <p>The scale of the buildings permitted under PC14 is not consistent with the extensive post-earthquake developments that have already occurred. The post-quake developments have created a very attractive City which will be undermined by these proposals. Existing intensive residential developments, such as the Atlas Quarter, could be overshadowed by new buildings of nearly twice the height on the east and west, blocking sunlight. Others may be blocked to the north.</p> <p>In short, the proposal for increased heights across the City are ill-considered solutions for problems that exist in Auckland, Wellington, and possibly other centres, but are not applicable to Christchurch. The geography and existing development of these other centres constrains new development. Post-earthquake Christchurch is quite different from these other centres: it is not constrained for growth opportunities, as demonstrated by the far slower growth in property prices over recent years. Even before the earthquakes, Christchurch had far more stable (less volatile) prices than Auckland and Wellington – a trend that has persisted since at least the 1970’s. In Christchurch there is housing choice, particularly with substantial increases in the number of higher density residential apartments.</p> <p>Maximising the benefits of intensification needs to consider the dis-benefits. The proposed Plan identifies loss of tree cover as a disbenefit but does appear to put sufficient emphasis on other matters. Why does it propose financial contributions for loss of tree cover but not for loss of sunlight to others, wind tunnel effects or loss of amenity? In the Christchurch context, the widespread demolition of much of the central city, including most of the taller buildings, and consolidation of activities into more compact precincts, has created a much more attractive City with a visual appearance and aesthetic appropriate for the size of the City, reflected in the Central City Recovery Plan issued by CERA after extensive public and expert engagement. Both residents and visitors are commenting on the attractiveness of this new look. Re-introducing unnecessarily large buildings undermines this new and attractive look. Even with setbacks and other requirements, it has the potential to detract from the amenity and value of the very substantial public and private investment made for the City’s re-build and recovery.</p>	
Scentre (New Zealand) Limited/ #260.3		Seek Amendment	Amend Rule 15.4.2.2 of PC14 to allow a maximum building height of 50m for Riccarton as opposed to the 22m proposed.	
Scentre (New Zealand) Limited/260.3	Anne Dingwall/ #FS2037.352	Seek Amendment	Amend Rule 15.4.2.2 of PC14 to allow a maximum building height of 50m for Riccarton as opposed to the 22m proposed.	Oppose

			<p>Scentre considers that 22m is an unsuitable maximum building height limit for Riccarton because a 20m height limit already applies to the centre and therefore there is very little provision for increased intensification for Riccarton under PC14, despite intensification being focussed within and on areas surrounding commercial centres.</p> <p>In keeping with the provisions of the District Plan, Scentre considers the increase in the height of Riccarton should be commensurate with the centre's status relative to other centres and to support the development of a legible urban form with commercial centres having greater height than the residential areas surrounding them.</p> <p>Scentre considers that the height limit for Riccarton in Rule 15.4.2.2 should be increased to 50m. Amending the height limit in this manner will provide for a clear legible form, and ensure that the centre is permitted to undertake further intensification to provide increased density as required under the Housing Supply Act and the NPS-UD. This also provides the opportunity for development of a mixed use nature over and above the existing centre.</p>

Waipuna Halswell-Hornby-Riccarton Community Board/ #902.21		Seek Amendment	[T]hat the maximum height of low rise commercial buildings by a residential sector be reduced to 14 metres. [A]t a minimum, [that] the height remain at the current level of 20 metres.	
Waipuna Halswell-Hornby-Riccarton Community Board/902.21	Kāinga Ora/ #FS2082.1283	Seek Amendment	<p>[T]hat the maximum height of low rise commercial buildings by a residential sector be reduced to 14 metres. [A]t a minimum, [that] the height remain at the current level of 20 metres. The Board opposes changing the provisions for the maximum height of a building from 20 to 22 metres [in Riccarton and Hornby]. The Board has no objection to the increased height for a large complex such as Westfield, but is concerned at currently low level commercial buildings alongside residential areas being 22 metres. One example is the low-level commercial buildings on the northern side of Riccarton Road. The height of 20 metres was allowed in the 2016 Christchurch District Plan; until then building was allowed to 12 metres. The area of Kauri/Rata/Rimu has been viewed as critical to protect. The Riccarton Borough Council considered zoning the area residential, but settled on low rise commercial. The low-rise commercial has worked reasonably well. The Board requests a change of policy that the maximum height of low rise commercial buildings by a residential sector be reduced to 14 metres. We will advance more detailed argument {if more technical evidence can be provided} but at a minimum, it requests the height remain at the current level of 20 metres.</p>	Oppose

Commercial > Rules - Town Centre Zone > Built form standards - Town Centre Zone > Minimum road boundary setback - Qualifying Matter City Spine Transport Corridor

Submission Number	Further Submission No	Position	Decision Requested	FS Position
Waka Kotahi (NZ Transport Agency) / #805.10		Oppose	Delete the City Spine Transport Corridor Qualifying Matter.	
Kāinga Ora – Homes and Communities / #834.98		Oppose	Delete the Key Transport Corridors – CitySpine Qualifying Matter and all associated provisions.	
Kāinga Ora – Homes and Communities /834.98	Catholic Diocese of Christchurch/ #FS2044.67	Oppose	Delete the Key Transport Corridors – CitySpine Qualifying Matter and all associated provisions. Kāinga Ora oppose the ‘CitySpine’ being a qualifying matter and considers this to be inconsistent with the requirements of Section 77L. The associated rules require buildings and outdoor living spaces to be set back from spine road corridors in both residential and commercial zones. In commercial zones there is a direct conflict in urban design outcomes (and rules) where the Key Pedestrian Frontage rules require buildings to be built up to the road boundary in order to deliver good urban design outcomes and facilitates a continuous street edge (often with veranda cover for pedestrians). It is understood that the intention of the rule is to enable road widening in the future to accommodate public rapid transit. If Council’s intention is to acquire land in the future to facilitate public works then it should use the designation powers available to it. Given the highly developed nature of these existing corridors with lengthy sections of commercial property built to the road boundary, it is unclear how any corridor-long road widening will occur without major land acquisition and demolition.	Support

Cameron Matthews/121.12	Christchurch International Airport Limited/ #FS2052.74	Seek Amendment	Amend the Airport Noise Qualifying Matter to either: <ul style="list-style-type: none"> make all relevant activities within the Airport Noise Contour Restricted Discretionary, contingent on their meeting the indoor design sound levels already specified in the operative Christchurch District Plan 15, or, 	Oppose

			<ul style="list-style-type: none"> re-zone sites within the Airport Noise Contour to a Medium Residential Zone, High Residential Zone or any other zone that would otherwise apply, and amend those zone's rules to require any permitted activity within the Airport Noise Contour to meet the indoor design sound levels already specified in the operative Christchurch District Plan <p>Aside from the option of limiting residential density in the affected area, inadequate assessment is given to any other means to "manage the specific characteristics" as required by NPS-UD [3.33], i.e., mitigate the sound exposure.</p> <p>In the current District Plan, the effects of aircraft noise are not managed via density restrictions affecting the baseline of the zone, but by ensuring dwellings at densities exceeding a zone's baseline are subject to indoor design sound level limits specified in Christchurch District Plan Appendix 14.16.4. Curiously, this existing mechanism does not protect residents from high sound exposure if their dwelling is compliant with the permitted activities within the operative Residential Suburban zone i.e., is low-density (2 dwellings per site, 8m / 2 storey building height limit), and could therefore be considered ineffective at present at protecting residents from high sound exposure. It does, however, limit the number of dwellings (to below MDRS standards), and therefore limits the number of residents in the affected area, likely reducing the 'reverse-sensitivity' effects on the airport.</p> <p>In either of the above cases, we could instead require "any bedroom to be designed and constructed to achieve an external to internal noise reduction of not less than 35 dB" or some other suitable fixed-attenuation, similar to residential activities within commercial and mixed-use zones [Proposed Housing and Business Choice Plan Change (PC14) Chapter 15 Commercial, 15.4.1.1 Permitted activities P12, P21; 15.5.1.1 Permitted activities P12, P21; 15.10.1.1 Permitted activities P27].</p> <p>Not only would either of these protect residents and users of all new occupied buildings from exposure to high sound levels without excessively limiting the density in the area, in-so-doing they would also limit the reverse-sensitivity effects on the airport. They would maintain some consistency with the current district plan but extend the protection from high sound exposure to residents of low-density dwellings. Sites within the ANC could then be zoned such that they were consistent with MDRS and NPS-UD, enabling greater housing capacity in an area of Riccarton/Fendalton which the TPG report highlights as central to the locations of feasible medium density development (refer to Figure 8 and Figure 9).</p>

Retirement Villages Association of New Zealand Inc/811.100	Summerset Group Holdings Limited/ #FS2097.94	Seek Amendment	insert new rule is in the Local Centre Zone that provides for retirement villages as permitted activities. LCZ-RX – Retirement village Activity status: PER Activity status when compliance not achieved: N/A Recognising that the Enabling Housing Act is not limited to residential zones, with Councils required to ensure district plans provide for intensification in urban non-residential zones, the RVA considers that the Local Centre Zone should provide for retirement village activities as a permitted activity (with the construction of the retirement village being a restricted discretionary activity). This would recognise that retirement villages provide substantial benefit by enabling older people to remain in familiar community environments for longer (close to family and support networks), whilst also freeing up a number of dwellings located in surrounding suburbs.	Support
Carter Group Limited/ #814.194		Oppose	Retain the status quo in respect of Rule 15.5.1.1 P21.	
Carter Group Limited/814.194	Kāinga Ora/ #FS2082.1024	Oppose	Retain the status quo in respect of Rule 15.5.1.1 P21. The proposed amendments introduce additional design standards (re: outdoor living space, glazing and outlook space requirements). Such changes are not necessary or appropriate for the purposes of promoting intensification and they impose additional consenting requirements with associated implications in terms of time, cost, and uncertainty. Accordingly, these amendments should be deleted.	Seek Amendment

Tony Pennell/ #308.4		Seek Amendment	[New built form standard to require] provision for future solar panel installation unless orientation north is impossible.	
Tony Pennell/308.4	Kāinga Ora/ #FS2082.250	Seek Amendment	[New built form standard to require] provision for future solar panel installation unless orientation north is impossible. I would suggest this as part of the future sustainability mission for our smart city development. Many of us wish to have solar power on the roof. A 12 mtr building with a terrace or green roof is ideal. A 12 mtr structure will probably preclude solar panels unless designed in.	Oppose

Rosemary Fraser/ #26.4		Seek Amendment	Opposes change to height limits and having buildings 90m tall. Make sure that wind and winter conditions are taken into consideration when considering building height controls.	
Rosemary Fraser/26.4	Cambridge 137 Limited/ #FS2042.4	Seek Amendment	Opposes change to height limits and having buildings 90m tall. Make sure that wind and winter conditions are taken into consideration when considering building height controls. Wind tunnels occur between taller buildings as happens on Colombo Street between the library and Te Pai. As Christchurch experiences strong winds and is flat, it could create dangerous situations if there are tall buildings on both side of street. Even with appropriate foundations they would still sway terrifying people on the higher floors. Also, the taller the building the more difficult it would be to escape if there was a fire. Also, with increased shading, there is likely to be for ice on paths for longer in winter.	Oppose

Atlas Quarter Residents Group (22 owners) / #224.11		Oppose	That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible.	
Atlas Quarter Residents Group (22 owners) /224.11	Kāinga Ora/ #FS2082.175	Oppose	That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible. Who we are: This submission is made on behalf of the following persons, all of whom own units in the Atlas Quarter, 36 Welles Street, Christchurch Central: Richard Ball, Athena Ellis, Phil and Lynette Stenning, Max Lucas, Paul and Jeni Neilson, Jenny Jia and Zhongyang Yuan, Piers and Emma Bayley, Rachel and Tim Scanlan, Eileen and Vernon Payne, Bruce Fraser, Eléonore Dumaine, Peter and Faye Greenwood, Alan Steel, Gillian Smeith, Chelsea Kennedy, Deborah Bowker, Kate and Mike Peers, Peter Morris, Mathilde Vachon, Barbra Pullar, Martin Rumbold and Kirsty Stewart. Key points: We support well designed intensive residential and commercial development, integrated with sustainable transport options. We have already “put our money where our mouths are” by purchasing units in the Atlas Quarter, a large and successful inner-city development of 110 residential and three commercial units.	Oppose

We oppose the greatly increased height limits proposed by Plan Change 14. They are unnecessary and inappropriate for Christchurch.

We support the inclusion of qualifying matters to enhance design quality and urban amenity across the City.

Relief sought:

1. That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible.
2. Where Government legislation and regulations require increases to height limits, that these are kept to the minimum extent possible for compliance with the regulations.
3. The need for greater intensification is supported but this does not require or justify the proposed increases in height limits as permitted activities.
4. The inclusion of the qualifying criteria is supported, independent of height limits, as a means of promoting good design and ensuring new buildings do not adversely impact existing buildings designed and constructed within the current District Plan requirements.

Reasons:

Following the Christchurch earthquakes, a comprehensive design process was undertaken for the City, particularly for the central city. Deliberate and well-informed decisions were made create a liveable city, with intensified development in the central city and around suburban centres, but with lower central city height limits than previously existed. This has created a compact central city with increased densities compared to before the earthquakes, but without the height of some of the buildings that Christchurch had pre-earthquake . The consolidation has resulted in many vacant sites becoming available which are gradually being filled.

This model was developed by looking at best practice around the world, combined with local input from residents and experts, to create an attractive and vibrant City. It set ambitious goals for increasing densities for residential living, especially in the central city and around suburban centres. It was fully integrated with future transport options and climate resilience objectives.

It has widespread local support and was developed with considerable input and investment from Government (via CERA) and Christchurch City Council. It integrated land use and transport, seeking higher densities and more sustainable transport, as reflected in the Land Use Recovery Plan, Christchurch Central Recovery Plan and the Central City Transport Plan. It was embedded into the District Plan through an Independent Hearing Panel of experts hand-picked by the Government.

The greatly increased height limits proposed Plan Change 14 undermines the objectives and principles that underpin the vision of the 2015 Christchurch Central Recovery Plan:

“To become one of the best small cities in the world, Christchurch needs a city centre that is:

- *an inspiring place to live*
- *an attractive place to invest*
- *the best urban environment in New Zealand.”*

The decision to limit heights was a deliberate choice in achieving this vision. The proposed changes will undermine existing investments, entered into in good faith based on the Recovery Plans, while also reducing the central city’s design coherence and creating a less attractive City.

The many empty sites and carparks that still exist post-earthquake provide adequate future capacity for the foreseeable future, including the “competitive margin” required by Government regulations. The only apparent reason for increasing the height limits appears to be compliance with new Government regulations. If the height limits are to be increased, this change should be done to the minimum extent needed to comply with these ill-considered Government requirements. There is no other justification for the proposed rules.

The proposed rules allow new development to be concentrated in a small number of very tall buildings, with the negative impacts such as greater shading and wind tunnels, accompanied by a continuation of many empty and ugly lots in the central city. As the vacant sites are largely filled with cheap carparking, this further undermines the stated transport sustainability and climate resilience objectives.

The scale of the buildings permitted under PC14 is not consistent with the extensive post-earthquake developments that have already occurred. The post-quake developments have created a very attractive City which will be undermined by these proposals. Existing intensive residential developments, such as the Atlas Quarter, could be overshadowed by new buildings of nearly twice the height on the east and west, blocking sunlight. Others may be blocked to the north.

			<p>In short, the proposal for increased heights across the City are ill-considered solutions for problems that exist in Auckland, Wellington, and possibly other centres, but are not applicable to Christchurch. The geography and existing development of these other centres constrains new development. Post-earthquake Christchurch is quite different from these other centres: it is not constrained for growth opportunities, as demonstrated by the far slower growth in property prices over recent years. Even before the earthquakes, Christchurch had far more stable (less volatile) prices than Auckland and Wellington – a trend that has persisted since at least the 1970's. In Christchurch there is housing choice, particularly with substantial increases in the number of higher density residential apartments.</p> <p>Maximising the benefits of intensification needs to consider the dis-benefits. The proposed Plan identifies loss of tree cover as a disbenefit but does appear to put sufficient emphasis on other matters. Why does it propose financial contributions for loss of tree cover but not for loss of sunlight to others, wind tunnel effects or loss of amenity? In the Christchurch context, the widespread demolition of much of the central city, including most of the taller buildings, and consolidation of activities into more compact precincts, has created a much more attractive City with a visual appearance and aesthetic appropriate for the size of the City, reflected in the Central City Recovery Plan issued by CERA after extensive public and expert engagement. Both residents and visitors are commenting on the attractiveness of this new look. Re-introducing unnecessarily large buildings undermines this new and attractive look. Even with setbacks and other requirements, it has the potential to detract from the amenity and value of the very substantial public and private investment made for the City's re-build and recovery.</p>

Support in part

As identified in the submission point on Town Centre heights –Merivale, Church Corner and Sydenham are sought to be elevated to a ‘Town Centre’ zone and provided with a 22m height limit. In the alternative, they are sought to be afforded a 22m height limit as Local Centre (Large). As sought above the remaining medium centres and Ferrymead are sought to become ‘large’ Local Centres, with the ‘small’ Local Centres simply being ‘local centres’. In terms of heights, the new large centres are sought to have a consistent 22m height limit to provide for additional capacity and conformity with the proposed HRZ height limits adjoining these centres within this submission. The exception is New Brighton, given qualifying matters associated with appropriate natural hazards reduce intensification opportunities. All remaining Neighbourhood Centres are sought to have a standard height limit of 14m to provide a scale commensurate with the surrounding MRZ areas and to differentiate from the 12m height limit applying to Neighbourhood Centres.

Waka Kotahi (NZ Transport Agency) / #805.11		Oppose	Delete the City Spine Transport Corridor Qualifying Matter.	
Kāinga Ora – Homes and Communities / #834.99		Oppose	Delete the Key Transport Corridors – CitySpine Qualifying Matter and all associated provisions.	
Kāinga Ora – Homes and Communities /834.99	Catholic Diocese of Christchurch/ #FS2044.68	Oppose	Delete the Key Transport Corridors – CitySpine Qualifying Matter and all associated provisions. Kāinga Ora oppose the ‘CitySpine’ being a qualifying matter and considers this to be inconsistent with the requirements of Section 77L. The associated rules require buildings and outdoor living spaces to be set back from spine road corridors in both residential and commercial zones. In commercial zones there is a direct conflict in urban design outcomes (and rules) where the Key Pedestrian Frontage rules require buildings to be built up to the road boundary in order to deliver good urban design outcomes and facilitates a continuous street edge (often with veranda cover for pedestrians). It is understood that the intention of the rule is to enable road widening in the future to accommodate public rapid transit. If Council’s intention is to acquire land in the future to facilitate public works then it should use the designation powers available to it. Given the highly developed nature of these existing corridors with lengthy sections of commercial property built to the road boundary, it is unclear how any corridor-long road widening will occur without major land acquisition and demolition.	Support

Retirement Villages Association of New Zealand Inc/811.102	Summerset Group Holdings Limited/ #FS2097.96	Seek Amendment	insert new rule in the Neighbourhood Centre Zone that provides for retirement villages as permitted activities. NCZ-RX – Retirement village Activity status: PER Activity status when compliance not achieved: N/A Recognising that the Enabling Housing Act is not limited to residential zones, with Councils required to ensure district plans provide for intensification in urban non-residential zones, the RVA considers that the Neighbourhood Centre Zone should provide for retirement village activities as a permitted activity (with the construction of the retirement village being a restricted discretionary activity). This would recognise that retirement villages provide substantial benefit by enabling older people to remain in familiar community environments for longer (close to family and support networks), whilst also freeing up a number of dwellings located in surrounding suburbs. The RVA supports Rule 15.6.1.1 (P1) and the permitting of the establishment of any new building, or addition to a building when complying with the relevant standards; and the triggering of more restrictive activity statuses based on non-compliance with relevant activity specific standards and built form standards.</p> <p>Noting that retirement villages will infringe the standard requiring residential activities to be located above ground level and likely infringe the setback from road frontage</p>	
--	--	--	--

			standard for residential activities in the central city, retirement villages will typically be a restricted discretionary activity. As such, the RVA considers that a rule should be provided that provides specifically for retirement villages as a restricted discretionary activity, and that the construction of retirement villages should have their own set of focused matters of discretion (so as to provide for and acknowledge the differences that retirement villages have from other residential activities). The RVA considers the matters of discretion applicable to retirement villages need to appropriately provide for / support the efficient use of larger sites for retirement villages, and the functional and operational needs of the retirement village.

Rosemary Fraser/ #26.5		Seek Amendment	Opposes change to height limits and having buildings 90m tall. Make sure that wind and winter conditions are taken into consideration when considering building height controls.	
Rosemary Fraser/26.5	Cambridge 137 Limited/ #FS2042.5	Seek Amendment	Opposes change to height limits and having buildings 90m tall. Make sure that wind and winter conditions are taken into consideration when considering building height controls. Wind tunnels occur between taller buildings as happens on Colombo Street between the library and Te Pai. As Christchurch experiences strong winds and is flat, it could create dangerous situations if there are tall buildings on both side of street. Even with appropriate foundations they would still sway terrifying people on the higher floors. Also, the taller the building the more difficult it would be to escape if there was a fire. Also, with increased shading, there is likely to be for ice on paths for longer in winter.	Oppose

Atlas Quarter Residents Group (22 owners) / #224.12		Oppose	That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible	
Atlas Quarter Residents Group (22 owners) /224.12	Kāinga Ora/ #FS2082.176	Oppose	<p>That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible</p> <p>Who we are:</p> <p>This submission is made on behalf of the following persons, all of whom own units in the Atlas Quarter, 36 Welles Street, Christchurch Central:</p> <p>Richard Ball, Athena Ellis, Phil and Lynette Stenning, Max Lucas, Paul and Jeni Neilson, Jenny Jia and Zhongyang Yuan, Piers and Emma Bayley, Rachel and Tim Scanlan, Eileen and Vernon Payne, Bruce Fraser, Eléonore Dumaine, Peter and Faye Greenwood, Alan Steel, Gillian Smeith, Chelsea Kennedy, Deborah Bowker, Kate and Mike Peers, Peter Morris, Mathilde Vachon, Barbra Pullar, Martin Rumbold and Kirsty Stewart.</p> <p>Key points:</p> <p>We support well designed intensive residential and commercial development, integrated with sustainable transport options. We have already “put our money where our mouths are” by purchasing units in the Atlas Quarter, a large and successful inner-city development of 110 residential and three commercial units.</p> <p>We oppose the greatly increased height limits proposed by Plan Change 14. They are unnecessary and inappropriate for Christchurch.</p> <p>We support the inclusion of qualifying matters to enhance design quality and urban amenity across the City.</p> <p>Relief sought:</p> <ol style="list-style-type: none"> 1. That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible. 2. Where Government legislation and regulations require increases to height limits, that these are kept to the minimum extent possible for compliance with the regulations. 3. The need for greater intensification is supported but this does not require or justify the proposed increases in height limits as permitted activities. 4. The inclusion of the qualifying criteria is supported, independent of height limits, as a means of promoting good design and ensuring new buildings do not adversely impact existing buildings designed and constructed within the current District Plan requirements. <p>Reasons:</p> <p>Following the Christchurch earthquakes, a comprehensive design process was undertaken for the City, particularly for the central city. Deliberate and well-informed decisions were made create a liveable city, with intensified development in the central city and around suburban centres, but with lower central city height limits than previously existed. This has created a compact central city with increased densities compared to before the earthquakes, but without the height of some of the buildings that Christchurch had pre-earthquake . The consolidation has resulted in many vacant sites becoming available which are gradually being filled.</p>	Oppose

			<p>This model was developed by looking at best practice around the world, combined with local input from residents and experts, to create an attractive and vibrant City. It set ambitious goals for increasing densities for residential living, especially in the central city and around suburban centres. It was fully integrated with future transport options and climate resilience objectives.</p> <p>It has widespread local support and was developed with considerable input and investment from Government (via CERA) and Christchurch City Council. It integrated land use and transport, seeking higher densities and more sustainable transport, as reflected in the Land Use Recovery Plan, Christchurch Central Recovery Plan and the Central City Transport Plan. It was embedded into the District Plan through an Independent Hearing Panel of experts hand-picked by the Government.</p> <p>The greatly increased height limits proposed Plan Change 14 undermines the objectives and principles that underpin the vision of the 2015 Christchurch Central Recovery Plan:</p> <p><i>“To become one of the best small cities in the world, Christchurch needs a city centre that is:</i></p> <ul style="list-style-type: none"> • <i>an inspiring place to live</i> • <i>an attractive place to invest</i> • <i>the best urban environment in New Zealand.”</i> <p>The decision to limit heights was a deliberate choice in achieving this vision. The proposed changes will undermine existing investments, entered into in good faith based on the Recovery Plans, while also reducing the central city’s design coherence and creating a less attractive City.</p> <p>The many empty sites and carparks that still exist post-earthquake provide adequate future capacity for the foreseeable future, including the “competitive margin” required by Government regulations. The only apparent reason for increasing the height limits appears to be compliance with new Government regulations. If the height limits are to be increased, this change should be done to the minimum extent needed to comply with these ill-considered Government requirements. There is no other justification for the proposed rules.</p> <p>The proposed rules allow new development to be concentrated in a small number of very tall buildings, with the negative impacts such as greater shading and wind tunnels, accompanied by a continuation of many empty and ugly lots in the central city. As the vacant sites are largely filled with cheap carparking, this further undermines the stated transport sustainability and climate resilience objectives.</p> <p>The scale of the buildings permitted under PC14 is not consistent with the extensive post-earthquake developments that have already occurred. The post-quake developments have created a very attractive City which will be undermined by these proposals. Existing intensive residential developments, such as the Atlas Quarter, could be overshadowed by new buildings of nearly twice the height on the east and west, blocking sunlight. Others may be blocked to the north.</p> <p>In short, the proposal for increased heights across the City are ill-considered solutions for problems that exist in Auckland, Wellington, and possibly other centres, but are not applicable to Christchurch. The geography and existing development of these other centres constrains new development. Post-earthquake Christchurch is quite different from these other centres: it is not constrained for growth opportunities, as demonstrated by the far slower growth in property prices over recent years. Even before the earthquakes, Christchurch had far more stable (less volatile) prices than Auckland and Wellington – a trend that has persisted since at least the 1970’s. In Christchurch there is housing choice, particularly with substantial increases in the number of higher density residential apartments.</p> <p>Maximising the benefits of intensification needs to consider the dis-benefits. The proposed Plan identifies loss of tree cover as a disbenefit but does appear to put sufficient emphasis on other matters. Why does it propose financial contributions for loss of tree cover but not for loss of sunlight to others, wind tunnel effects or loss of amenity? In the Christchurch context, the widespread demolition of much of the central city, including most of the taller buildings, and consolidation of activities into more compact precincts, has created a much more attractive City with a visual appearance and aesthetic appropriate for the size of the City, reflected in the Central City Recovery Plan issued by CERA after extensive public and expert engagement. Both residents and visitors are commenting on the attractiveness of this new look. Re-introducing unnecessarily large buildings undermines this new and attractive look. Even with setbacks and other requirements, it has the potential to detract from the amenity and value of the very substantial public and private investment made for the City’s re-build and recovery.</p>

Waka Kotahi (NZ Transport Agency) / #805.12		Oppose	Delete the City Spine Transport Corridor Qualifying Matter.	
Kāinga Ora – Homes and Communities / #834.100		Oppose	Delete the Key Transport Corridors – CitySpine Qualifying Matter and all associated provisions.	
Kāinga Ora – Homes and Communities /834.100	Catholic Diocese of Christchurch/ #FS2044.69	Oppose	Delete the Key Transport Corridors – CitySpine Qualifying Matter and all associated provisions. Kāinga Ora oppose the ‘CitySpine’ being a qualifying matter and considers this to be inconsistent with the requirements of Section 77L. The associated rules require buildings and outdoor living spaces to be set back from spine road corridors in both residential and commercial zones. In commercial zones there is a direct conflict in urban design outcomes (and rules) where the Key Pedestrian Frontage rules require buildings to be built up to the road boundary in order to deliver good urban design outcomes and facilitates a continuous street edge (often with veranda cover for pedestrians). It is understood that the intention of the rule is to enable road widening in the future to accommodate public rapid transit. If Council’s intention is to acquire land in the future to facilitate public works then it should use the designation powers available to it. Given the highly developed nature of these existing corridors with lengthy sections of commercial property built to the road boundary, it is unclear how any corridor-long road widening will occur without major land acquisition and demolition.	Support

Atlas Quarter Residents Group (22 owners) / #224.13		Oppose	That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible.	
Atlas Quarter Residents Group (22 owners) /224.13	Kāinga Ora/ #FS2082.177	Oppose	<p>That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible.</p> <p>Who we are:</p> <p>This submission is made on behalf of the following persons, all of whom own units in the Atlas Quarter, 36 Welles Street, Christchurch Central:</p> <p>Richard Ball, Athena Ellis, Phil and Lynette Stenning, Max Lucas, Paul and Jeni Neilson, Jenny Jia and Zhongyang Yuan, Piers and Emma Bayley, Rachel and Tim Scanlan, Eileen and Vernon Payne, Bruce Fraser, Eléonore Dumaine, Peter and Faye Greenwood, Alan Steel, Gillian Smeith, Chelsea Kennedy, Deborah Bowker, Kate and Mike Peers, Peter Morris, Mathilde Vachon, Barbra Pullar, Martin Rumbold and Kirsty Stewart.</p> <p>Key points:</p> <p>We support well designed intensive residential and commercial development, integrated with sustainable transport options. We have already “put our money where our mouths are” by purchasing units in the Atlas Quarter, a large and successful inner-city development of 110 residential and three commercial units.</p> <p>We oppose the greatly increased height limits proposed by Plan Change 14. They are unnecessary and inappropriate for Christchurch.</p> <p>We support the inclusion of qualifying matters to enhance design quality and urban amenity across the City.</p> <p>Relief sought:</p> <ol style="list-style-type: none"> 1. That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible. 2. Where Government legislation and regulations require increases to height limits, that these are kept to the minimum extent possible for compliance with the regulations. 3. The need for greater intensification is supported but this does not require or justify the proposed increases in height limits as permitted activities. 4. The inclusion of the qualifying criteria is supported, independent of height limits, as a means of promoting good design and ensuring new buildings do not adversely impact existing buildings designed and constructed within the current District Plan requirements. <p>Reasons:</p> <p>Following the Christchurch earthquakes, a comprehensive design process was undertaken for the City, particularly for the central city. Deliberate and well-informed decisions were made create a liveable city, with intensified development in the central city and around suburban centres, but with lower central city height limits than previously existed. This has created a compact central city with increased densities compared to before the earthquakes, but without the height of some of the buildings that Christchurch had pre-earthquake . The consolidation has resulted in many vacant sites becoming available which are gradually being filled.</p> <p>This model was developed by looking at best practice around the world, combined with local input from residents and experts, to create an attractive and vibrant City. It set ambitious goals for increasing densities for residential living, especially in the central city and around suburban centres. It was fully integrated with future transport options and climate resilience objectives.</p> <p>It has widespread local support and was developed with considerable input and investment from Government (via CERA) and Christchurch City Council. It integrated land use and transport, seeking higher densities and more sustainable transport, as reflected in the Land Use Recovery Plan, Christchurch Central Recovery Plan and the Central City Transport Plan. It was embedded into the District Plan through an Independent Hearing Panel of experts hand-picked by the Government.</p> <p>The greatly increased height limits proposed Plan Change 14 undermines the objectives and principles that underpin the vision of the 2015 Christchurch Central Recovery Plan:</p>	Oppose

			<p><i>“To become one of the best small cities in the world, Christchurch needs a city centre that is:</i></p> <ul style="list-style-type: none"> <i>• an inspiring place to live</i> <i>• an attractive place to invest</i> <i>• the best urban environment in New Zealand.”</i> <p>The decision to limit heights was a deliberate choice in achieving this vision. The proposed changes will undermine existing investments, entered into in good faith based on the Recovery Plans, while also reducing the central city’s design coherence and creating a less attractive City.</p> <p>The many empty sites and carparks that still exist post-earthquake provide adequate future capacity for the foreseeable future, including the “competitive margin” required by Government regulations. The only apparent reason for increasing the height limits appears to be compliance with new Government regulations. If the height limits are to be increased, this change should be done to the minimum extent needed to comply with these ill-considered Government requirements. There is no other justification for the proposed rules.</p> <p>The proposed rules allow new development to be concentrated in a small number of very tall buildings, with the negative impacts such as greater shading and wind tunnels, accompanied by a continuation of many empty and ugly lots in the central city. As the vacant sites are largely filled with cheap carparking, this further undermines the stated transport sustainability and climate resilience objectives.</p> <p>The scale of the buildings permitted under PC14 is not consistent with the extensive post-earthquake developments that have already occurred. The post-quake developments have created a very attractive City which will be undermined by these proposals. Existing intensive residential developments, such as the Atlas Quarter, could be overshadowed by new buildings of nearly twice the height on the east and west, blocking sunlight. Others may be blocked to the north.</p> <p>In short, the proposal for increased heights across the City are ill-considered solutions for problems that exist in Auckland, Wellington, and possibly other centres, but are not applicable to Christchurch. The geography and existing development of these other centres constrains new development. Post-earthquake Christchurch is quite different from these other centres: it is not constrained for growth opportunities, as demonstrated by the far slower growth in property prices over recent years. Even before the earthquakes, Christchurch had far more stable (less volatile) prices than Auckland and Wellington – a trend that has persisted since at least the 1970’s. In Christchurch there is housing choice, particularly with substantial increases in the number of higher density residential apartments.</p> <p>Maximising the benefits of intensification needs to consider the dis-benefits. The proposed Plan identifies loss of tree cover as a disbenefit but does appear to put sufficient emphasis on other matters. Why does it propose financial contributions for loss of tree cover but not for loss of sunlight to others, wind tunnel effects or loss of amenity? In the Christchurch context, the widespread demolition of much of the central city, including most of the taller buildings, and consolidation of activities into more compact precincts, has created a much more attractive City with a visual appearance and aesthetic appropriate for the size of the City, reflected in the Central City Recovery Plan issued by CERA after extensive public and expert engagement. Both residents and visitors are commenting on the attractiveness of this new look. Re-introducing unnecessarily large buildings undermines this new and attractive look. Even with setbacks and other requirements, it has the potential to detract from the amenity and value of the very substantial public and private investment made for the City’s re-build and recovery.</p>

The provision is not justified in terms of s32, is not the most appropriate mechanism to secure increased road widths, or proxy road reserve planting and landscaping at the expense of developable area. Provision and Qualifying matter is not supported by Policy 4/ clause 3.32 of the NPS-UD. Inconsistency with design outcomes specified in Rule 15.4.2.3, including clause (i) Key Pedestrian Frontages associated with Riccarton, Church Corner, Merivale and Papanui Centres. If road widening is required to facilitate rapid transit infrastructure then Council should use its designating powers.	Support

Atlas Quarter Residents Group (22 owners) / #224.14		Oppose	That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible.	
Atlas Quarter Residents Group (22 owners) /224.14	Kāinga Ora/ #FS2082.178	Oppose	<p>That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible.</p> <p>Who we are:</p> <p>This submission is made on behalf of the following persons, all of whom own units in the Atlas Quarter, 36 Welles Street, Christchurch Central:</p> <p>Richard Ball, Athena Ellis, Phil and Lynette Stenning, Max Lucas, Paul and Jeni Neilson, Jenny Jia and Zhongyang Yuan, Piers and Emma Bayley, Rachel and Tim Scanlan, Eileen and Vernon Payne, Bruce Fraser, Eléonore Dumaine, Peter and Faye Greenwood, Alan Steel, Gillian Smeith, Chelsea Kennedy, Deborah Bowker, Kate and Mike Peers, Peter Morris, Mathilde Vachon, Barbra Pullar, Martin Rumbold and Kirsty Stewart.</p> <p>Key points:</p> <p>We support well designed intensive residential and commercial development, integrated with sustainable transport options. We have already “put our money where our mouths are” by purchasing units in the Atlas Quarter, a large and successful inner-city development of 110 residential and three commercial units.</p> <p>We oppose the greatly increased height limits proposed by Plan Change 14. They are unnecessary and inappropriate for Christchurch.</p> <p>We support the inclusion of qualifying matters to enhance design quality and urban amenity across the City.</p> <p>Relief sought:</p> <ol style="list-style-type: none"> 1. That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible. 2. Where Government legislation and regulations require increases to height limits, that these are kept to the minimum extent possible for compliance with the regulations. 3. The need for greater intensification is supported but this does not require or justify the proposed increases in height limits as permitted activities. 4. The inclusion of the qualifying criteria is supported, independent of height limits, as a means of promoting good design and ensuring new buildings do not adversely impact existing buildings designed and constructed within the current District Plan requirements. <p>Reasons:</p> <p>Following the Christchurch earthquakes, a comprehensive design process was undertaken for the City, particularly for the central city. Deliberate and well-informed decisions were made create a liveable city, with intensified development in the central city and around suburban centres, but with lower central city height limits than previously existed. This has created a compact central city with increased densities compared to before the earthquakes, but without the height of some of the buildings that Christchurch had pre-earthquake . The consolidation has resulted in many vacant sites becoming available which are gradually being filled.</p> <p>This model was developed by looking at best practice around the world, combined with local input from residents and experts, to create an attractive and vibrant City. It set ambitious goals for increasing densities for residential living, especially in the central city and around suburban centres. It was fully integrated with future transport options and climate resilience objectives.</p> <p>It has widespread local support and was developed with considerable input and investment from Government (via CERA) and Christchurch City Council. It integrated land use and transport, seeking higher densities and more sustainable transport, as reflected in the Land Use Recovery Plan, Christchurch Central Recovery Plan and the Central City Transport Plan. It was embedded into the District Plan through an Independent Hearing Panel of experts hand-picked by the Government.</p> <p>The greatly increased height limits proposed Plan Change 14 undermines the objectives and principles that underpin the vision of the 2015 Christchurch Central Recovery Plan:</p> <p><i>“To become one of the best small cities in the world, Christchurch needs a city centre that is:</i></p> <ul style="list-style-type: none"> • <i>an inspiring place to live</i> • <i>an attractive place to invest</i> • <i>the best urban environment in New Zealand.”</i> 	Oppose

			<p>The decision to limit heights was a deliberate choice in achieving this vision. The proposed changes will undermine existing investments, entered into in good faith based on the Recovery Plans, while also reducing the central city's design coherence and creating a less attractive City.</p> <p>The many empty sites and carparks that still exist post-earthquake provide adequate future capacity for the foreseeable future, including the "competitive margin" required by Government regulations. The only apparent reason for increasing the height limits appears to be compliance with new Government regulations. If the height limits are to be increased, this change should be done to the minimum extent needed to comply with these ill-considered Government requirements. There is no other justification for the proposed rules.</p> <p>The proposed rules allow new development to be concentrated in a small number of very tall buildings, with the negative impacts such as greater shading and wind tunnels, accompanied by a continuation of many empty and ugly lots in the central city. As the vacant sites are largely filled with cheap carparking, this further undermines the stated transport sustainability and climate resilience objectives.</p> <p>The scale of the buildings permitted under PC14 is not consistent with the extensive post-earthquake developments that have already occurred. The post-quake developments have created a very attractive City which will be undermined by these proposals. Existing intensive residential developments, such as the Atlas Quarter, could be overshadowed by new buildings of nearly twice the height on the east and west, blocking sunlight. Others may be blocked to the north.</p> <p>In short, the proposal for increased heights across the City are ill-considered solutions for problems that exist in Auckland, Wellington, and possibly other centres, but are not applicable to Christchurch. The geography and existing development of these other centres constrains new development. Post-earthquake Christchurch is quite different from these other centres: it is not constrained for growth opportunities, as demonstrated by the far slower growth in property prices over recent years. Even before the earthquakes, Christchurch had far more stable (less volatile) prices than Auckland and Wellington – a trend that has persisted since at least the 1970's. In Christchurch there is housing choice, particularly with substantial increases in the number of higher density residential apartments.</p> <p>Maximising the benefits of intensification needs to consider the dis-benefits. The proposed Plan identifies loss of tree cover as a disbenefit but does appear to put sufficient emphasis on other matters. Why does it propose financial contributions for loss of tree cover but not for loss of sunlight to others, wind tunnel effects or loss of amenity? In the Christchurch context, the widespread demolition of much of the central city, including most of the taller buildings, and consolidation of activities into more compact precincts, has created a much more attractive City with a visual appearance and aesthetic appropriate for the size of the City, reflected in the Central City Recovery Plan issued by CERA after extensive public and expert engagement. Both residents and visitors are commenting on the attractiveness of this new look. Re-introducing unnecessarily large buildings undermines this new and attractive look. Even with setbacks and other requirements, it has the potential to detract from the amenity and value of the very substantial public and private investment made for the City's re-build and recovery.</p>

Waka Kotahi (NZ Transport Agency) / #805.13		Oppose	Delete the City Spine Transport Corridor Qualifying Matter.	
Kāinga Ora – Homes and Communities / #834.101		Oppose	Delete the Key Transport Corridors – City Spine Qualifying Matter and all associated provisions.	

Kāinga Ora – Homes and Communities /834.101	Catholic Diocese of Christchurch/ #FS2044.70	Oppose	Delete the Key Transport Corridors – CitySpine Qualifying Matter and all associated provisions. Kāinga Ora oppose the ‘CitySpine’ being a qualifying matter and considers this to be inconsistent with the requirements of Section 77L. The associated rules require buildings and outdoor living spaces to be set back from spine road corridors in both residential and commercial zones. In commercial zones there is a direct conflict in urban design outcomes (and rules) where the Key Pedestrian Frontage rules require buildings to be built up to the road boundary in order to deliver good urban design outcomes and facilitates a continuous street edge (often with veranda cover for pedestrians). It is understood that the intention of the rule is to enable road widening in the future to accommodate public rapid transit. If Council’s intention is to acquire land in the future to facilitate public works then it should use the designation powers available to it. Given the highly developed nature of these existing corridors with lengthy sections of commercial property built to the road boundary, it is unclear how any corridor-long road widening will occur without major land acquisition and demolition.	Support

2. Where Government legislation and regulations require increases to height limits, that these are kept to the minimum extent possible for compliance with the regulations.
3. The need for greater intensification is supported but this does not require or justify the proposed increases in height limits as permitted activities.
4. The inclusion of the qualifying criteria is supported, independent of height limits, as a means of promoting good design and ensuring new buildings do not adversely impact existing buildings designed and constructed within the current District Plan requirements.

Reasons:

Following the Christchurch earthquakes, a comprehensive design process was undertaken for the City, particularly for the central city. Deliberate and well-informed decisions were made create a liveable city, with intensified development in the central city and around suburban centres, but with lower central city height limits than previously existed. This has created a compact central city with increased densities compared to before the earthquakes, but without the height of some of the buildings that Christchurch had pre-earthquake . The consolidation has resulted in many vacant sites becoming available which are gradually being filled.

This model was developed by looking at best practice around the world, combined with local input from residents and experts, to create an attractive and vibrant City. It set ambitious goals for increasing densities for residential living, especially in the central city and around suburban centres. It was fully integrated with future transport options and climate resilience objectives.

It has widespread local support and was developed with considerable input and investment from Government (via CERA) and Christchurch City Council. It integrated land use and transport, seeking higher densities and more sustainable transport, as reflected in the Land Use Recovery Plan, Christchurch Central Recovery Plan and the Central City Transport Plan. It was embedded into the District Plan through an Independent Hearing Panel of experts hand-picked by the Government.

The greatly increased height limits proposed Plan Change 14 undermines the objectives and principles that underpin the vision of the 2015 Christchurch Central Recovery Plan:

“To become one of the best small cities in the world, Christchurch needs a city centre that is:

- *an inspiring place to live*
- *an attractive place to invest*
- *the best urban environment in New Zealand.”*

The decision to limit heights was a deliberate choice in achieving this vision. The proposed changes will undermine existing investments, entered into in good faith based on the Recovery Plans, while also reducing the central city’s design coherence and creating a less attractive City.

The many empty sites and carparks that still exist post-earthquake provide adequate future capacity for the foreseeable future, including the “competitive margin” required by Government regulations. The only apparent reason for increasing the height limits appears to be compliance with new Government regulations. If the height limits are to be increased, this change should be done to the minimum extent needed to comply with these ill-considered Government requirements. There is no other justification for the proposed rules.

The proposed rules allow new development to be concentrated in a small number of very tall buildings, with the negative impacts such as greater shading and wind tunnels, accompanied by a continuation of many empty and ugly lots in the central city. As the vacant sites are largely filled with cheap carparking, this further undermines the stated transport sustainability and climate resilience objectives.

The scale of the buildings permitted under PC14 is not consistent with the extensive post-earthquake developments that have already occurred. The post-quake developments have created a very attractive City which will be undermined by these proposals. Existing intensive residential developments, such as the Atlas Quarter, could be overshadowed by new buildings of nearly twice the height on the east and west, blocking sunlight. Others may be blocked to the north.

In short, the proposal for increased heights across the City are ill-considered solutions for problems that exist in Auckland, Wellington, and possibly other centres, but are not applicable to Christchurch. The geography and existing development of these other centres constrains new development. Post-earthquake Christchurch is quite different from these other centres: it is not constrained for growth opportunities, as demonstrated by the far slower growth in property prices over recent years. Even before the earthquakes, Christchurch had far more stable (less volatile) prices than Auckland and Wellington – a trend that has persisted since at least the 1970’s. In Christchurch there is housing choice, particularly with substantial increases in the number of higher density residential apartments.

Maximising the benefits of intensification needs to consider the dis-benefits. The proposed Plan identifies loss of tree cover as a disbenefit but does appear to put sufficient emphasis on other matters. Why does it propose financial contributions for loss of tree cover but not for loss of sunlight to others, wind tunnel effects or loss of amenity? In the Christchurch context, the widespread demolition of much of the central city, including most of the taller buildings, and consolidation of activities into more compact precincts, has created a much more attractive City with a visual appearance and aesthetic appropriate for the size of the City, reflected in

			the Central City Recovery Plan issued by CERA after extensive public and expert engagement. Both residents and visitors are commenting on the attractiveness of this new look. Re-introducing unnecessarily large buildings undermines this new and attractive look. Even with setbacks and other requirements, it has the potential to detract from the amenity and value of the very substantial public and private investment made for the City's re-build and recovery.

Geordie Shaw/ #235.6		Seek Amendment	[That P27.h. the minimum glazing standard allows more flexibility in achieving the intent of the policies]	
ChristchurchNZ/ #760.14		Seek Amendment	Amend P4, P5, P6, and P7 to insert a new activity-specific standard: (a) Car parking shall be limited to 1space per150sqm.	
ChristchurchNZ/760.14	Kāinga Ora/ #FS2082.532	Seek Amendment	Amend P4, P5, P6, and P7 to insert a new activity-specific standard: (a) Car parking shall be limited to 1space per150sqm. These activities have the potential to be high trip generating, therefore inconsistent with the objective of transitioning the Sydenham and Waltham mixed use zones into high-density, high-quality walkable neighbourhoods...that support a reduction in greenhouse gas emissions. The proposed amendment better reflects that objective, allowing these activities to establish whilst ensuring that the urban environment is well functioning for the intended mix of uses. It therefore better achieves both the NPSUD and the objectives and policies for the mixed use zone.	Oppose
ChristchurchNZ/ #760.15		Seek Amendment	Amend P8 to insert a new activity specific standard: a. Any service station in the Sydenham and Waltham Mixed Use Zones shall be located on a minor or major arterial road.	
ChristchurchNZ/760.15	Kāinga Ora/ #FS2082.533	Seek Amendment	Amend P8 to insert a new activity specific standard: a. Any service station in the Sydenham and Waltham Mixed Use Zones shall be located on a minor or major arterial road. Service stations are high trip generating activities, inconsistent with the objective of transitioning the Sydenham and Waltham mixed use zones into high density walkable neighbourhoods that ...support a reduction greenhouse gas emissions (Objective 15.2.3) and walkable neighbourhoods (Policy 15.2.3.2). Limiting their establishment to locations that have a high intensity traffic function more appropriately gives effect to Objective 15.2.3 and Policy 15.2.3.2 whilst still providing for service stations in the locations that they typically prefer to locate in (i.e. highly visible and trafficked).	Oppose
ChristchurchNZ/ #760.16		Support	Retain P12 as notified

Kāinga Ora – Homes and Communities / #834.282		Seek Amendment	1. Amend P27 to delete clause (b) relating to the Comprehensive Housing Precinct. 2. Add additional activity rules enabling a suite of community activities i.e. rules 14.5.1.1 P5-P13, P20.	
Kāinga Ora – Homes and Communities / #834.282	ChristchurchNZ/ #FS2048.10	Seek Amendment	1. Amend P27 to delete clause (b) relating to the Comprehensive Housing Precinct. 2. Add additional activity rules enabling a suite of community activities i.e. rules 14.5.1.1 P5-P13, P20. Support the enablement of residential in P27, subject to deletion of the 'Comprehensive Housing Precinct'. The rule framework does not enable the suite of community activities that are inherent in good quality mixed use neighbourhoods. The rule framework must enable activities such as preschools, education, spiritual, health, community facilities, and convenience retail to support the emergence of a genuinely mixed use neighbourhood. The activity standards for these activities in the MRZ are equally appropriate and set appropriate limits on activity size to ensure effects of larger facilities are able to be assessed. Such activities do not generally give rise to retail distribution effects, and will not give rise to reverse sensitivity effects given the clear change in outcome sought for these areas and the enablement of residential activity throughout the mixed use zone.	Oppose
Kāinga Ora – Homes and Communities / #834.282	ChristchurchNZ/ #FS2048.23	Seek Amendment	1. Amend P27 to delete clause (b) relating to the Comprehensive Housing Precinct. 2. Kāinga Ora – Homes and Communities / #834.284		Oppose	P27 Delete all existing provisions and provide a suite of workable and clear rules that encourage and enable large scale redevelopment. Remove statutory impediments in Appendix 15.15.12 – Sydenham and Appendix 15.15.13 requiring 'Greenways' and 'Shared Pedestrian / Cycleways' and seek to facilitate through more appropriate means – such as negotiated purchase.	
Kāinga Ora – Homes and Communities / #834.284	Anne Dingwall/ #FS2037.34	Oppose	P27 Delete all existing provisions and provide a suite of workable and clear rules that encourage and enable large scale redevelopment. Remove statutory impediments in Appendix 15.15.12 – Sydenham and Appendix 15.15.13 requiring 'Greenways' and 'Shared Pedestrian / Cycleways' and seek to facilitate through more appropriate means – such as negotiated purchase. These provisions are overtly complicated, unworkable and provide inappropriate mechanisms to manage development and acquire public laneways (Appendix 15.15.12 – Sydenham and Appendix 15.15.13). Clarity needs to be improved in (P27) that those provisions apply to all MUZ except: (i) Blenheim Road / Main South Road 15.10.1.4 (D1); and (ii) Comprehensive Housing Precinct (15.10.1.3 (RD3) and (RD4). Reference in 15.10.1.3 (RD3) to 15.14.3.40 (a) (iv) and (v) is incorrect, as these provisions do not exist. The respective matters identified in relation to 15.10.1.3 (RD4) are overly excessive and broad. 15.10.1.5 (NC3) has the statutory function of deeming all Comprehensive Residential Development	Oppose

			<p>within the precinct identified for such (at Appendix 15.15.12 and 15.15.13) noncomplying. This inconsistency and error needs to be corrected. The matters expressed in 15.14.3.40 are overly excessive and broad (effectively not restricting the matters to be assessed), lack certainty of achievement, and are absent a resource management purpose. Collectively these matters are the antithesis of the achievement of Objective 3.3.1 and Objective 3.3.2 and will disenable investment and redevelopment. Reference is sought to be made to a good quality living environment that positively contributes to local amenity as a high quality environment is contextually unobtainable in a transitioning Mixed Use Environment. The requirements in Appendix 15.15.12 – Sydenham and Appendix 15.15.13. Appendix 15.15.14 are not the most appropriate in terms of s32 of the Act, and will act to disenable redevelopment and the purpose of the Zone.</p>

ChristchurchNZ/ #760.18		Seek Amendment	Amend NC3 to read: “Any Comprehensive Residential Activity within the Comprehensive Housing Precinct for sites identified in Appendix 15.15.12 and 15.15.13 as allocation for required pedestrian/cycle, road or greenway connections, unless the desired street to street connection/s have been provided”	
ChristchurchNZ/760.18	Kāinga Ora/ #FS2082.557	Seek Amendment	Amend NC3 to read: “Any Comprehensive Residential Activity within the Comprehensive Housing Precinct for sites identified in Appendix 15.15.12 and 15.15.13 as allocation for required pedestrian/cycle, road or greenway connections, unless the desired street to street connection/s have been provided” Whilst we understand and accept the basis of this rule being to preclude development in blocks so large that they do not support walkability and to ensure that redevelopment of sites in these locations does not stymie the potential for important mid-block connections in these locations, as worded NC3 simply limits all development in these locations, regardless of whether or not the desired links have been provided or committed to. The proposed amendment more appropriately provides for a future scenario when the connections have been secured.	Oppose
Kāinga Ora – Homes and Communities / #834.288		Oppose	NC3 Delete all existing provisions and provide a suite of workable and clear rules that encourage and enable large scale redevelopment. Remove statutory impediments in Appendix 15.15.12 – Sydenham and Appendix 15.15.13 requiring ‘Greenways’ and ‘Shared Pedestrian / Cycleways’ and seek to facilitate through more appropriate means – such as negotiated purchase.	
Kāinga Ora – Homes and Communities /834.288	ChristchurchNZ/ #FS2048.12	Oppose	NC3 Delete all existing provisions and provide a suite of workable and clear rules that encourage and enable large scale redevelopment. Remove statutory impediments in Appendix 15.15.12 – Sydenham and Appendix 15.15.13 requiring ‘Greenways’ and ‘Shared Pedestrian / Cycleways’ and seek to facilitate through more appropriate means – such as negotiated purchase. These provisions are overly complicated, unworkable and provide inappropriate mechanisms to manage development and acquire public laneways (Appendix 15.15.12 – Sydenham and Appendix 15.15.13). Clarity needs to be improved in (P27) that those provisions apply to all MUZ except: (i) Blenheim Road / Main South Road 15.10.1.4(D1); and (ii) Comprehensive Housing Precinct (15.10.1.3 (RD3) and (RD4). Reference in 15.10.1.3(RD3) to 15.14.3.40(a)(iv) and (v) is incorrect, as these provisions do not exist. The respective matters identified in relation to 15.10.1.3(RD4) are overly excessive and broad. 15.10.1.5(NC3) has the statutory function of deeming all Comprehensive Residential Development within the precinct identified for such (at Appendix 15.15.12 and 15.15.13) noncomplying. This inconsistency and error needs to be corrected. The matters expressed in 15.14.3.40 are overly excessive and broad (effectively not restricting the matters to be assessed), lack certainty of achievement, and are absent a resource management purpose. Collectively these matters are the antithesis of the achievement of Objective 3.3.1 and Objective 3.3.2 and will disenable investment and redevelopment. Reference is sought to be made to a good quality living environment that positively contributes to local amenity as a high quality environment is contextually unobtainable in a transitioning Mixed Use Environment. The requirements in Appendix 15.15.12 – Sydenham and Appendix 15.15.13. Appendix 15.15.14 are not the most appropriate in terms of s32 of the Act, and will act to disenable redevelopment and the purpose of the Zone.	Oppose

Rosemary Fraser/ #26.6		Seek Amendment	Opposes change to height limits and having buildings 90m tall. Make sure that wind and winter conditions are taken into consideration when considering building height controls.	
Rosemary Fraser/26.6	Cambridge 137 Limited/ #FS2042.6	Seek Amendment	Opposes change to height limits and having buildings 90m tall. Make sure that wind and winter conditions are taken into consideration when considering building height controls. Wind tunnels occur between taller buildings as happens on Colombo Street between the library and Te Pai. As Christchurch experiences strong winds and is flat, it could create dangerous situations if there are tall buildings on both side of street. Even with appropriate foundations they would still sway terrifying people on the higher floors. Also, the taller the building the more difficult it would be to escape if there was a fire. Also, with increased shading, there is likely to be for ice on paths for longer in winter.	Oppose

Atlas Quarter Residents Group (22 owners) / #224.16		Oppose	That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible.	
Atlas Quarter Residents Group (22 owners) /224.16	Kāinga Ora/ #FS2082.180	Oppose	<p>That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible.</p> <p>Who we are:</p> <p>This submission is made on behalf of the following persons, all of whom own units in the Atlas Quarter, 36 Welles Street, Christchurch Central:</p> <p>Richard Ball, Athena Ellis, Phil and Lynette Stenning, Max Lucas, Paul and Jeni Neilson, Jenny Jia and Zhongyang Yuan, Piers and Emma Bayley, Rachel and Tim Scanlan, Eileen and Vernon Payne, Bruce Fraser, Eléonore Dumaine, Peter and Faye Greenwood, Alan Steel, Gillian Smeith, Chelsea Kennedy, Deborah Bowker, Kate and Mike Peers, Peter Morris, Mathilde Vachon, Barbra Pullar, Martin Rumbold and Kirsty Stewart.</p> <p>Key points:</p> <p>We support well designed intensive residential and commercial development, integrated with sustainable transport options. We have already “put our money where our mouths are” by purchasing units in the Atlas Quarter, a large and successful inner-city development of 110 residential and three commercial units.</p> <p>We oppose the greatly increased height limits proposed by Plan Change 14. They are unnecessary and inappropriate for Christchurch.</p> <p>We support the inclusion of qualifying matters to enhance design quality and urban amenity across the City.</p> <p>Relief sought:</p> <ol style="list-style-type: none"> 1. That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible. 2. Where Government legislation and regulations require increases to height limits, that these are kept to the minimum extent possible for compliance with the regulations. 3. The need for greater intensification is supported but this does not require or justify the proposed increases in height limits as permitted activities. 4. The inclusion of the qualifying criteria is supported, independent of height limits, as a means of promoting good design and ensuring new buildings do not adversely impact existing buildings designed and constructed within the current District Plan requirements. <p>Reasons:</p> <p>Following the Christchurch earthquakes, a comprehensive design process was undertaken for the City, particularly for the central city. Deliberate and well-informed decisions were made create a liveable city, with intensified development in the central city and around suburban centres, but with lower central city height limits than previously existed. This has created a compact central city with increased densities compared to before the earthquakes, but without the height of some of the buildings that Christchurch had pre-earthquake . The consolidation has resulted in many vacant sites becoming available which are gradually being filled.</p> <p>This model was developed by looking at best practice around the world, combined with local input from residents and experts, to create an attractive and vibrant City. It set ambitious goals for increasing densities for residential living, especially in the central city and around suburban centres. It was fully integrated with future transport options and climate resilience objectives.</p> <p>It has widespread local support and was developed with considerable input and investment from Government (via CERA) and Christchurch City Council. It integrated land use and transport, seeking higher densities and more sustainable transport, as reflected in the Land Use Recovery Plan, Christchurch Central Recovery Plan and the Central City Transport Plan. It was embedded into the District Plan through an Independent Hearing Panel of experts hand-picked by the Government.</p> <p>The greatly increased height limits proposed Plan Change 14 undermines the objectives and principles that underpin the vision of the 2015 Christchurch Central Recovery Plan:</p> <p><i>“To become one of the best small cities in the world, Christchurch needs a city centre that is:</i></p> <ul style="list-style-type: none"> • <i>an inspiring place to live</i> 	Oppose

			<ul style="list-style-type: none"> • <i>an attractive place to invest</i> • <i>the best urban environment in New Zealand.</i> <p>The decision to limit heights was a deliberate choice in achieving this vision. The proposed changes will undermine existing investments, entered into in good faith based on the Recovery Plans, while also reducing the central city's design coherence and creating a less attractive City.</p> <p>The many empty sites and carparks that still exist post-earthquake provide adequate future capacity for the foreseeable future, including the "competitive margin" required by Government regulations. The only apparent reason for increasing the height limits appears to be compliance with new Government regulations. If the height limits are to be increased, this change should be done to the minimum extent needed to comply with these ill-considered Government requirements. There is no other justification for the proposed rules.</p> <p>The proposed rules allow new development to be concentrated in a small number of very tall buildings, with the negative impacts such as greater shading and wind tunnels, accompanied by a continuation of many empty and ugly lots in the central city. As the vacant sites are largely filled with cheap carparking, this further undermines the stated transport sustainability and climate resilience objectives.</p> <p>The scale of the buildings permitted under PC14 is not consistent with the extensive post-earthquake developments that have already occurred. The post-quake developments have created a very attractive City which will be undermined by these proposals. Existing intensive residential developments, such as the Atlas Quarter, could be overshadowed by new buildings of nearly twice the height on the east and west, blocking sunlight. Others may be blocked to the north.</p> <p>In short, the proposal for increased heights across the City are ill-considered solutions for problems that exist in Auckland, Wellington, and possibly other centres, but are not applicable to Christchurch. The geography and existing development of these other centres constrains new development. Post-earthquake Christchurch is quite different from these other centres: it is not constrained for growth opportunities, as demonstrated by the far slower growth in property prices over recent years. Even before the earthquakes, Christchurch had far more stable (less volatile) prices than Auckland and Wellington – a trend that has persisted since at least the 1970's. In Christchurch there is housing choice, particularly with substantial increases in the number of higher density residential apartments.</p> <p>Maximising the benefits of intensification needs to consider the dis-benefits. The proposed Plan identifies loss of tree cover as a disbenefit but does appear to put sufficient emphasis on other matters. Why does it propose financial contributions for loss of tree cover but not for loss of sunlight to others, wind tunnel effects or loss of amenity? In the Christchurch context, the widespread demolition of much of the central city, including most of the taller buildings, and consolidation of activities into more compact precincts, has created a much more attractive City with a visual appearance and aesthetic appropriate for the size of the City, reflected in the Central City Recovery Plan issued by CERA after extensive public and expert engagement. Both residents and visitors are commenting on the attractiveness of this new look. Re-introducing unnecessarily large buildings undermines this new and attractive look. Even with setbacks and other requirements, it has the potential to detract from the amenity and value of the very substantial public and private investment made for the City's re-build and recovery.</p>	
Property Council New Zealand/ #242.5		Seek Amendment	Support an increased height limit of 32 metres to areas immediately surrounding the central city. However, we recommend that this wording be changed back to how it was written in last year's consultation document i.e., "an increased height limit of 32 metres within a walkable catchment of 800m or 10 minutes" rather than "an increased height limit of 32 metres to areas immediately surrounding the central city".	
Property Council New Zealand/242.5	Cambridge 137 Limited/ #FS2042.33	Seek Amendment	Support an increased height limit of 32 metres to areas immediately surrounding the central city. However, we recommend that this wording be changed back to how it was written in last year's consultation document i.e., "an increased height limit of 32 metres within a walkable catchment of 800m or 10 minutes" rather than "an increased height limit of 32 metres to areas immediately surrounding the central city". This change in wording will lead to different interpretations and create uncertainty for the development community.	Support

Visitor cycle parking shall also comply with rules 7.5.2(a)(ii) to (viii) and (x). l: "The maximum onsite car parking to residential unit ratio shall be 0.1 across the Comprehensive Residential Development. Car parking onsite shall only be provided for in the following circumstances: (i) A maximum of two car parking spaces for a residential car share scheme across the Comprehensive Residential Development; (ii) A maximum of one space per accessible residential unit To correct reference and to refer to the Appendix in a note beneath the standards. Also, slight amendment of wording to reflect that the diagram referred to doesn't represent all of the standards in 15.10.2.9. Pedestrian access is defined such that the word 'way' is unnecessary. The comma after 'gates' changes the intent of the provision, opening the opportunity to allow storage and fencing etc with the exception only applying to security gates. This would be an inappropriate outcome. The intention of the Comprehensive Housing Precinct is to promote a perimeter block form that ensures the safety of public space users and amenity of the public space environment as part of key part of creating a walkable neighbourhood. As such, all public spaces that people are likely to access and move through should be afforded the same treatment. The proposed changes adopt existing district plan defined terms to achieve this outcome. Without this amendment there would be a risk of inappropriate development fronting onto a greenway (i.e. it could be the non-active sides of a streetfronting development). Whilst we understand the basis for the 3 storey minimum on south sides of streets expressed in the s32 report, question the benefits of this (access to a little more light to internal common areas at the equinox) vs the costs associated with promoting a lower rise urban form for what are very extensive south side streets. The proposed amendment would be more appropriate to enforce the urban form and development type intended for the area, including mid-to-high density residential development and a consistent urban street wall. As would be expected in a higher density environment, some compromise in terms of sunlight access is expected, and as such the reduction to a minimum of 3 storeys, which will impact urban form (and potentially yield), is not supported. We support requirement for a higher provision of cycle parking given the greater role that active modes will need to play in the zone to achieve the objective of a low carbon, walkable neighbourhood. Facilities including versatile and secure storage facilities for bikes and micro-mobility options support this intent. The location and form of cycle storage can have a substantive impact on the amenity and functionality of a comprehensive site. Cycle storage integrated within the building, but providing for personal access i.e. to a secure storage cage or compartment, allows for flexibility in how the storage may be utilized. In addition, there has recently been significant uptake in the use of e-bikes and cargo bikes which can be expected to continue into the future and which require additional secure space to ensure that they are a viable transport choice in high density living environments Limiting car share spaces to 2 on very large development sites may be insufficient to meet demand and the 0.1 ratio should be sufficient to manage the effects of excessive car parking. Accessible residential unit is shown in green to denote a defined term however no definition is provided in the notified proposal for chapter 2. We support this term being defined to aid user clarity (see proposed relief that addresses this matter). 	Support

New Zealand Institute of Architects Canterbury Branch/ #762.32		Seek Amendment	[T]hat the minimum site size is to be reduced to 1500m ² or at most 1800m ² .	
New Zealand Institute of Architects Canterbury Branch/762.32	Anne Dingwall/ #FS2037.797	Seek Amendment	[T]hat the minimum site size is to be reduced to 1500m ² or at most 1800m ² . Within this zone there are several lots that are close to meeting the proposed minimum site requirements when combined with adjacent sites however fall just short. There are also several sections that are close to meeting the standard alone but fall short. To enable ease of development in this area to occur over a reasonable timeframe we propose that the minimum site size is to be reduced to 1500m ² or at most 1800m ² . Note: any policy that would enable a reduced setback to occur will also aid in promoting development within this area, effectively gaining 72m ² of developable land.	Support

Waka Kotahi (NZ Transport Agency) / #805.14		Oppose	Delete the City Spine Transport Corridor Qualifying Matter.	
Kāinga Ora – Homes and Communities / #834.102		Oppose	Delete the Key Transport Corridors – City Spine Qualifying Matter and all associated provisions.	
Kāinga Ora – Homes and Communities /834.102	Catholic Diocese of Christchurch/ #FS2044.71	Oppose	Delete the Key Transport Corridors – City Spine Qualifying Matter and all associated provisions. Kāinga Ora oppose the 'City Spine' being a qualifying matter and considers this to be inconsistent with the requirements of Section 77L. The associated rules require buildings and outdoor living spaces to be set back from spine road corridors in both residential and commercial zones. In commercial zones there is a direct conflict in urban design outcomes (and rules) where the Key Pedestrian Frontage rules require buildings to be built up to the road boundary in order to deliver good urban design outcomes and facilitates a continuous street edge (often with veranda cover for pedestrians). It is understood that the intention of the rule is to enable road widening in the future to accommodate public rapid transit. If Council's intention is to acquire land in the future to facilitate public works then it should use the designation powers available to it. Given the highly developed nature of these existing corridors with lengthy sections of commercial property built to the road boundary, it is unclear how any corridor-long road widening will occur without major land acquisition and demolition.	Support

Victoria Neighbourhood Association (VNA) / #61.45		Oppose	Retain current District Plan Rules as permitted within Victoria Neighbourhood area.	

Victoria Neighbourhood Association (VNA) /61.45	Anne Dingwall/ #FS2037.118	Oppose	<p>Retain current District Plan Rules as permitted within Victoria Neighbourhood area.</p> <p>The delineation of boundaries of the CCZ is way too simplistic and blunt. The delineation for the CCZ is the Town Hall on Kilmore St which has very little amenity value for residents in the VNA, to get to services residents must walk around the Town Hall and through Victoria Square to access the city, yet this is not factored at all.</p> <p>The concept of having a tiered city and enabling taller building in the HRZ vs the HRZ Precinct on paper makes sense but then for the VNA we have CCMUZ in between with a height overlay of 32m whereas the East of the city does not. This CCMUZ provides the intended break between the CCZ and HRZ we don't need two layers of tiering, therefore the precinct with a height limit of 14m should apply from Salisbury Street to provide a consistent approach as for the East/Melrose Street area.</p> <p>Having a one size fits all approach in this area is inconsistent with good urban form and social, economic and cultural wellbeing of the current residents.</p> <p>It seems unfair and discriminatory that residents living in central city streets will be more adversely impacted by Proposed plan changes in PC14 when compared to those living in medium density residential areas given recession plains do not apply to the first 20m of street frontage in the proposed HRZ under PC14.</p>	Support

Ceres New Zealand, LLC/ #150.6		Oppose	<p>a. Delete Rule 15.11.1.1.c</p> <p>b. Delete Rule 15.11.1.1 (P17)</p> <p>c. Retain activity specific standard b of Rules 15.11.1.1 (P13) and (P14).</p>	
Ceres New Zealand, LLC/150.6	Kāinga Ora/ #FS2082.71	Oppose	<p>a. Delete Rule 15.11.1.1.c</p> <p>b. Delete Rule 15.11.1.1 (P17)</p> <p>c. Retain activity specific standard b of Rules 15.11.1.1 (P13) and (P14).</p> <p>Rule 15.11.1.1 (P17) significantly impacts the redevelopment of 25 Peterborough Street and the building therein by limiting the land uses and associated scale that are permitted to operate from this property. As previously mentioned, repairing, reconstructing, and / or redeveloping 25 Peterborough Street and its significantly damaged heritage building will be at a great cost. This cost will be weighed against the longterm economic benefit of the work and, therefore, the use of 25 Peterborough Street needs to be maximised. This can be achieved by enabling appropriate land uses to operate from 25 Peterborough Street as permitted activities, without limiting their scale. Rules 15.11.1.1 (P1) to (P15) detail land uses anticipated within the City Centre Zone and Ceres consider these same uses and associated scales to be appropriate to operate from 25</p>	Oppose

			Peterborough Street. Rule 15.10.1.1 (P17) of the Operative Plan was largely proposed by Ceres in their submission on the Christchurch District Plan 2015. However, since the 2015 submission, Ceres have a greater awareness of the significant scope of works and associated cost to repair, restore, or reconstruct 25 Peterborough Street. To balance those costs, Ceres need to be able to maximise the built form and land use opportunities available for 25 Peterborough Street. The Section 32 Evaluation Report for the Commercial Sub-Chapters and supporting documentation does not provide any reasoning for the retention of Rule 15.11.1.1 (P17) of PC14. Therefore, it does not seem sensible to restrict the land uses or control land uses that operate from 25 Peterborough Street any differently to the wider City Centre Zone. Hence, Rule 15.11.1.1 (P17) of PC14 should be deleted as it does not foster the restoration / redevelopment of 25 Peterborough from an economical / financial perspective.

Victoria Neighbourhood Association (VNA) / #61.44		Seek Amendment	That each new build needs to be assessed in relation to design and impact on neighbours.	
Victoria Neighbourhood Association (VNA) /61.44	Kāinga Ora/ #FS2082.35	Seek Amendment	<p>That each new build needs to be assessed in relation to design and impact on neighbours.</p> <p>The delineation of boundaries of the CCZ is way too simplistic and blunt. The delineation for the CCZ is the Town Hall on Kilmore St which has very little amenity value for residents in the VNA, to get to services residents must walk around the Town Hall and through Victoria Square to access the city, yet this is not factored at all.</p> <p>The concept of having a tiered city and enabling taller building in the HRZ vs the HRZ Precinct on paper makes sense but then for the VNA we have CCMUZ in between with a height overlay of 32m whereas the East of the city does not. This CCMUZ provides the intended break between the</p>	Oppose

			<p>CCZ and HRZ we don't need two layers of tiering, therefore the precinct with a height limit of 14m should apply from Salisbury Street to provide a consistent approach as for the East/Melrose Street area.</p> <p>Having a one size fits all approach in this area is inconsistent with good urban form and social, economic and cultural wellbeing of the current residents.</p> <p>It seems unfair and discriminatory that residents living in central city streets will be more adversely impacted by Proposed plan changes in PC14 when compared to those living in medium density residential areas given recession plains do not apply to the first 20m of street frontage in the proposed HRZ under PC14.</p>	
Heritage New Zealand Pouhere Taonga (HNZPT) / #193.20		Support	Retain RD11 as proposed	
Property Council New Zealand/ #242.9		Seek Amendment	Council provides consistent and clear guidelines to provide certainty for the development community, particularly given the length of resource and time it takes to establish a project prior to its construction. We urge the Council to work in partnership with the public and private development sectors	
Kate Z/ #297.31		Seek Amendment	That resource consent to be required for buildings greater than two stories and all subdivisions.	
Kate Revell/ #338.11		Seek Amendment	Restrict building heights to a maximum of 22 metres.	
Kate Revell/338.11	Cambridge 137 Limited/ #FS2042.41	Seek Amendment	Restrict building heights to a maximum of 22 metres. I oppose the increase in building height limits of 22+ metres. This includes suburban and commercial. I believe that the highest building height should be 22 metres in all areas	Oppose
Chris Neame/ #339.11		Seek Amendment	Restrict maximum height for development to 22 metres

Tony Pennell/ #308.9		Seek Amendment	[New built form standard to require] provision for future solar panel installation unless orientation north is impossible.	
Tony Pennell/308.9	Kāinga Ora/ #FS2082.255	Seek Amendment	[New built form standard to require] provision for future solar panel installation unless orientation north is impossible. I would suggest this as part of the future sustainability mission for our smart city development. Many of us wish to have solar power on the roof. A 12mtr building with a terrace or green roof is ideal. A 12mtr structure will probably preclude solar panels unless designed in.	Oppose
James Carr/ #519.8		Seek Amendment	seeks to amend the height limits in the Central City zones to allow exemptions for spires, domes, sculptural caphouses or other architectural features [etc.] that add visual interest to the skyline without adding bulk or significant shading.	
James Carr/519.8	Anne Dingwall/ #FS2037.519	Seek Amendment	<p>seeks to amend the height limits in the Central City zones to allow exemptions for spires, domes, sculptural caphouses or other architectural features [etc.] that add visual interest to the skyline without adding bulk or significant shading.</p> <p>In the Central City zone the height limits appear to be hard numbers. This does not allow for spires, domes, sculptural caphouses or other architectural features that add visual interest to the skyline without adding bulk or significant shading. If these are not allowed for, then they must come out of the total height of the building, and this of course will actively discourage such things. I would enjoy seeing a more intricate and fun skyline in our city, and I think other people would too.</p> <p>A minimum lot size of 500 square metres in the Central City Mixed Use Zone is big and is likely to discourage smaller developers from creating more interesting smaller buildings. For example, I have been working with a developer on a proposal for a rather loud building on a 250 square metre site on High Street, with a retail ground floor and perhaps five stories of apartments above. There is no good reason why such things should be discouraged. This is probably getting close to the lower size limit for a medium rise building with a single stair and lift to be economic, but it still seems to be viable, and a smaller building is a smaller financial commitment (and risk) if the developer wants to do something more daring architecturally or conceptually.</p> <p>I also think much smaller downtown buildings need to be an option, say two to four storeys on a footprint of say 150 square metres or less, especially for smaller businesses with specific needs, people wanting to live above their workplace, and people wanting to live at the centre of things but in their own house. These exist overseas and used to exist here too.</p> <p>I would like to see an Urban Residential zoning, allowing small sections (maybe as small as 120 square metres) with up to say 70% site coverage, with buildings allowed full height lot-line to lot-line and potentially fronting right onto the street boundary. These might be anything from entirely residential to say 60% commercial but associated with the attached dwelling, and maybe perhaps include up to say three dwelling units. These could appeal to artists living in and around their gallery and studio space, cafés and specialty shops where the owner (and family live above and in the courtyard behind), as well as professionals with their consulting rooms incorporated into the house. This kind of zoning could also exist around blocks of shops and smaller centres, and maybe in places like Lyttelton. If a zoning that allows very high urban style density could be labelled as residential then such properties might also be eligible for residential lending, which is significantly more affordable than commercial finance, and therefore available to a much wider range of homeowners.</p>	Support

Mary-Louise Hoskins/670.1	Cambridge 137 Limited/ #FS2042.46	Oppose	<p>[Reduce] the 92m height limit for the central city [or ensure done with great architectural merit].</p> <p>There is an abundance of vacant land in and around the city. Just one building of this height (92m) will not only look peculiarly out of place, it will soak up the tenants and businesses for years to come creating near ghost towns around them.</p> <p>If there are to be such significant high rise, then ensure that these are done with great architectural merit to build on the fine bones ChCh now has. Think of skyscrapers akin to the Shard in London, not the totally uninspiring highrise that dominate the Auckland skyline. Make sure Christchurch continues its current trajectory of fine restored old buildings such as the Arts Centre juxtaposed with great modern designs such as Te Pae.</p>	Oppose

Victoria Neighbourhood Association (VNA) / #61.10		Seek Amendment	Amend Rule 15.11.2.11 to reduce height limits in the Central City Zone from 90m to 45m.	
Victoria Neighbourhood Association (VNA) /61.10	Anne Dingwall/ #FS2037.99	Seek Amendment	<p>Amend Rule 15.11.2.11 to reduce height limits in the Central City Zone from 90m to 45m.</p> <p>We would like to see the overall heights in the CCZ reduced from 90m to 45m. This in turn will better fit with heights in the areas designated as The Frame (21m) and CC Mixed Used Zones (32m) and HRZ (14m) at a height which would still achieve the tiered city design sought by CCC.</p> <p>PC14 should consider and enable and encourage smaller businesses back into the city core by having attractive smaller buildings with high aesthetic and amenity, rather than old fashioned skyscrapers and encouraging a compact city to return vibrancy to the “core.”</p>	Support

			<p>There is no consideration in PC14 on what the people of CHC want and need, or consideration of the “Have your say” feedback and intent of the CCRP of a low rise, garden city with a consolidated core. Whilst the idea of a tiered city makes sense as per the diagram in its intent below depicts the extreme proposed height in the CCZ of 90m is without any robust justification other than a way to justify three storeys in the MDRZ.</p> <p>The only rationale we can see for the 90m height limit is the Property Economics Report July 2022. This report recommends that the less limits on building height will encourage freedom to develop and higher yield thereby making city attractive to developers and that this, in turn, will signal that this is the city centre, thereby encouraging more development in this area.</p> <p>Add to this that there was no consideration in the Property Economics Report July 2022 report relating to demand trends in commercial high rise making this recommendation an academic exercise in planning to develop a tiered city scape to arrive at the MDRS of 11m in height. The report also acknowledges that it is unlikely that a 90m buildings will actually be developed and flies in the face of what the people of Christchurch want, yet the tier approach of the city design is predicated on a start enabled hight of 90m.</p> <p>The Property Economics Report July 2022 establishes that whilst larger corporates make up less than 20% of CHC’s business community they contribute 70% employment. No doubt this is true, but one should not assume that that this 70% employment all need to work in the city centre given the move to flexible working and WFH which is here to stay.</p> <p>The assumption in the report is that these people will drive much needed foot traffic is flawed given market trends in workforce especially larger employers like call centres, and public service who embrace WFH to reduce costs in real estate. It would be better to encourage buildings in the CCZ that will meet the needs of SME’s rather than large corporates to create a dynamic city centre that supports retail.</p> <p>There is a solution between enabling and at the same time delivering to what the people of Christchurch want as a low-rise city, this would also fit with developers opinion that there is enough existing capacity in CHC and there is no need to go higher. The desired urban profile could be achieved by reducing the maximum heights in all central city zones by at least 50% for now. This would still enable but without creating massive over enablement which comes with significant risk of creating a ghost town and making CHC highly unattractive for both residents and commercial.</p> <p>The current boundary of the CCZ in the proposed PC14 also shows that the corner of Kilmore and Durham St and Victoria St is the start of the city. Post-quake CCC deliberately erected arches on this corner signalling the “gateway to the city” there are information boards telling you what these arches are. A gateway into to the city cannot therefore be in the city (otherwise it wouldn’t be a gateway) A gang plank to get you onto a boat for example as a similar concept, where the gangplank is not the boat itself.</p> <p>A gateway to the city can’t therefore be part of the city, the city must start beyond the gateway...surely? The boundary of the city centre should therefore be reduced to showcase and signal a compact core.</p>	
Victoria Neighbourhood Association (VNA) /61.10	Cambridge 137 Limited/ #FS2042.13	Seek Amendment	<p>Amend Rule 15.11.2.11 to reduce height limits in the Central City Zone from 90m to 45m.</p> <p>We would like to see the overall heights in the CCZ reduced from 90m to 45m. The boundary of the city centre should therefore be reduced to showcase and signal a compact core.</p>	
Paul Wing/ #70.17		Seek Amendment	Amend Rule 15.11.2.11 - Building height such that the height of all buildings in the central city should be limited to no more than 5 storeys.	
Ceres New Zealand, LLC/ #150.1		Oppose	Delete Standard 15.11.2.11	
Ceres New Zealand, LLC/150.1	Kāinga Ora/ #FS2082.66	Oppose	Delete Standard 15.11.2.11 When these standards are applied to 25 Peterborough Street and 87-93 Victoria Street, in conjunction with the height standards and overlays, any redevelopment of these properties and buildings therein will be restricted and impeded in both its height and density options. Ceres engaged several experienced architectural firms to develop concept plans for 25 Peterborough Street to deliver a multi-storey apartment or hotel development. All proposed designs are considered to deliver high quality urban design outcomes, yet none of them would 7 comply with the 'podium and tower' typology which PC14 appears to seek and consider as being the only acceptable design solution. Applying the height standards / overlays, in conjunction with the standards bullet pointed above to the redevelopment of small or unusually shaped land parcels (which are common through the city centre) will be extremely challenging. Resultant of applying these standards / overlays, in most costs, the redevelopment of any city centre zone site (including 25 Peterborough Street and 87-93 Victoria Street) will result in a financial return significantly less than that achievable through the Operative Plan. Consequentially, it may be uneconomical to develop / redevelop many city centre sites including those occupied by significantly damaged buildings (which would be left in a state of disrepair / derelict) or those undeveloped and vacant. Consequentially, Standards 15.11.2.1, 15.11.2.3, 15.11.2.9 to 15.11.2.12, and 15.11.2.14 to 15.11.2.16 and the building height overlays of PC14 do not maximise the benefits of intensification and, therefore, are contrary to Policy 3 of the NPS-UD.	Oppose
Ceres New Zealand, LLC/ #150.11		Seek Amendment	Amend 15.11.2.11 to add an exemption which states that clauses ii to vi of Standard 15.11.2.11.a do not apply to any site containing a significant heritage item.	
Ceres New Zealand, LLC/150.11	Kāinga Ora/ #FS2082.72	Seek Amendment	Amend 15.11.2.11 to add an exemption which states that clauses ii to vi of Standard 15.11.2.11.a do not apply to any site containing a significant heritage item. The various height standards / overlays applicable to 25 Peterborough Street and 87-93 Victoria Street create confusion and will result in poor application due to the ambiguity. 6 Additionally, the various height standards / overlays are contrary to Policy 3 of the NPS-UD Amend 15.11.2.11 to add an exemption which states that clauses ii to vi of Standard 15.11.2.11.a do not apply to any site containing a significant heritage item. The various height standards / overlays applicable to 25 Peterborough Street and 87-93 Victoria Street create confusion and will result in poor application due to the ambiguity. 6 Additionally, the various height standards / overlays are contrary to Policy 3 of the NPS-UD	Oppose

Paul McNoe/ #171.4		Seek Amendment	[Reduce permitted building height] That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible	
Logan Brunner/ #191.9		Support	[Retain provisions that enable] 20-30 lvls in the central city	
Joshua Wight/ #199.7		Seek Amendment	Amend provisions to enable taller buildings, especially [within the] central city (20-30 lvls). Commercial centres and surrounding residential sites have increased height limits, generally to between 4 and 6 storeys.	
Joshua Wight/199.7	Anne Dingwall/ #FS2037.282	Seek Amendment	Amend provisions to enable taller buildings, especially [within the] central city (20-30 lvls). Commercial centres and surrounding residential sites have increased height limits, generally to between 4 and 6 storeys. This will result in more homes, more economic activity, more vibrant communities, and more economical public transport and other infrastructure upgrades. These benefits are further explained in the attached 'Benefits of Density' document.	Oppose
Robert J Manthei/ #200.11		Seek Amendment	Reduce height limits	
Robert J Manthei/200.11	Southern Cross Healthcare Limited/ #FS2041.1	Seek Amendment	Reduce height limits Although the Chch Central Recovery Plan (CCRP) has been revoked, "PC14 must still have regard to the directions of the CCRP under s74(2)(b)(i) of the RMA" Those directions include statements like the following: 2.1.39 – Under the CCRP, the aim was "the overall design concept for development of a greener, more accessible city with a compact core, more greenspace and a stronger built density". A central part of the CCRP was the concept of a 'frame' with there being three components, "each having its own distinct character and serving to contain the commercial area. It was considered that containing the available land area in this way would address the issue of too much development capacity..." 2.2.40 – "The Frame allows the Core to expand in the future if there is demand for housing or commercial development". 2.1.41 - "lower buildings will become a defining central city feature in the medium and that a lower rise city fits in with the community's wishes and takes into account of the economic realities and market demand for property in the Core." Thus, even though the requirement "that the District Plan must not be inconsistent with the CCRP" has been removed, it must still be taken into account. The CCRP clearly stated that the public's wishes were for lower heights for buildings and that there was ample capacity for expansion. There is virtually no risk of following this more conservative approach to densification, especially since a new Plan must be reviewed within 10 years of its adoption.	Oppose
Robert J Manthei/200.11	Kāinga Ora/ #FS2082.116	Seek Amendment	Reduce height limits Although the Chch Central Recovery Plan (CCRP) has been revoked, "PC14 must still have regard to the directions of the CCRP under s74(2)(b)(i) of the RMA" Those directions include statements like the following: 2.1.39 – Under the CCRP, the aim was "the overall design concept for development of a greener, more accessible city with a compact core, more greenspace and a stronger built density". A central part of the CCRP was the concept of a 'frame' with there being three components, "each having its own distinct character and serving to contain the commercial area. It was considered that containing the available land area in this way would address the issue of too much development capacity..." 2.2.40 – "The Frame allows the Core to expand in the future if there is demand for housing or commercial development". 2.1.41 - "lower buildings will become a defining central city feature in the medium and that a lower rise city fits in with the community's wishes and takes into account of the economic realities and market demand for property in the Core." Thus, even though the requirement "that the District Plan must not be inconsistent with the CCRP" has been removed, it must still be taken into account. The CCRP clearly stated that the public's wishes were for lower heights for buildings and that there was ample capacity for expansion. There is virtually no risk of following this more conservative approach to densification, especially since a new Plan must be reviewed within 10 years of its adoption.	Oppose

Atlas Quarter Residents Group (22 owners) / #224.17		Oppose	That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible	
Atlas Quarter Residents Group (22 owners) / 224.17	Kāinga Ora/ #FS2082.181	Oppose	That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible Who we are:	Oppose

This submission is made on behalf of the following persons, all of whom own units in the Atlas Quarter, 36 Welles Street, Christchurch Central:

Richard Ball, Athena Ellis, Phil and Lynette Stenning, Max Lucas, Paul and Jeni Neilson, Jenny Jia and Zhongyang Yuan, Piers and Emma Bayley, Rachel and Tim Scanlan, Eileen and Vernon Payne, Bruce Fraser, Eléonore Dumaine, Peter and Faye Greenwood, Alan Steel, Gillian Smeith, Chelsea Kennedy, Deborah Bowker, Kate and Mike Peers, Peter Morris, Mathilde Vachon, Barbra Pullar, Martin Rumbold and Kirsty Stewart.

Key points:

We support well designed intensive residential and commercial development, integrated with sustainable transport options. We have already “put our money where our mouths are” by purchasing units in the Atlas Quarter, a large and successful inner-city development of 110 residential and three commercial units.

We oppose the greatly increased height limits proposed by Plan Change 14. They are unnecessary and inappropriate for Christchurch.

We support the inclusion of qualifying matters to enhance design quality and urban amenity across the City.

Relief sought:

1. That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible.
2. Where Government legislation and regulations require increases to height limits, that these are kept to the minimum extent possible for compliance with the regulations.
3. The need for greater intensification is supported but this does not require or justify the proposed increases in height limits as permitted activities.
4. The inclusion of the qualifying criteria is supported, independent of height limits, as a means of promoting good design and ensuring new buildings do not adversely impact existing buildings designed and constructed within the current District Plan requirements.

Reasons:

Following the Christchurch earthquakes, a comprehensive design process was undertaken for the City, particularly for the central city. Deliberate and well-informed decisions were made create a liveable city, with intensified development in the central city and around suburban centres, but with lower central city height limits than previously existed. This has created a compact central city with increased densities compared to before the earthquakes, but without the height of some of the buildings that Christchurch had pre-earthquake . The consolidation has resulted in many vacant sites becoming available which are gradually being filled.

This model was developed by looking at best practice around the world, combined with local input from residents and experts, to create an attractive and vibrant City. It set ambitious goals for increasing densities for residential living, especially in the central city and around suburban centres. It was fully integrated with future transport options and climate resilience objectives.

It has widespread local support and was developed with considerable input and investment from Government (via CERA) and Christchurch City Council. It integrated land use and transport, seeking higher densities and more sustainable transport, as reflected in the Land Use Recovery Plan, Christchurch Central Recovery Plan and the Central City Transport Plan. It was embedded into the District Plan through an Independent Hearing Panel of experts hand-picked by the Government.

The greatly increased height limits proposed Plan Change 14 undermines the objectives and principles that underpin the vision of the 2015 Christchurch Central Recovery Plan:

“To become one of the best small cities in the world, Christchurch needs a city centre that is:

- *an inspiring place to live*
- *an attractive place to invest*
- *the best urban environment in New Zealand.”*

The decision to limit heights was a deliberate choice in achieving this vision. The proposed changes will undermine existing investments, entered into in good faith based on the Recovery Plans, while also reducing the central city’s design coherence and creating a less attractive City.

			<p>The many empty sites and carparks that still exist post-earthquake provide adequate future capacity for the foreseeable future, including the “competitive margin” required by Government regulations. The only apparent reason for increasing the height limits appears to be compliance with new Government regulations. If the height limits are to be increased, this change should be done to the minimum extent needed to comply with these ill-considered Government requirements. There is no other justification for the proposed rules.</p> <p>The proposed rules allow new development to be concentrated in a small number of very tall buildings, with the negative impacts such as greater shading and wind tunnels, accompanied by a continuation of many empty and ugly lots in the central city. As the vacant sites are largely filled with cheap carparking, this further undermines the stated transport sustainability and climate resilience objectives.</p> <p>The scale of the buildings permitted under PC14 is not consistent with the extensive post-earthquake developments that have already occurred. The post-quake developments have created a very attractive City which will be undermined by these proposals. Existing intensive residential developments, such as the Atlas Quarter, could be overshadowed by new buildings of nearly twice the height on the east and west, blocking sunlight. Others may be blocked to the north.</p> <p>In short, the proposal for increased heights across the City are ill-considered solutions for problems that exist in Auckland, Wellington, and possibly other centres, but are not applicable to Christchurch. The geography and existing development of these other centres constrains new development. Post-earthquake Christchurch is quite different from these other centres: it is not constrained for growth opportunities, as demonstrated by the far slower growth in property prices over recent years. Even before the earthquakes, Christchurch had far more stable (less volatile) prices than Auckland and Wellington – a trend that has persisted since at least the 1970’s. In Christchurch there is housing choice, particularly with substantial increases in the number of higher density residential apartments.</p> <p>Maximising the benefits of intensification needs to consider the dis-benefits. The proposed Plan identifies loss of tree cover as a disbenefit but does appear to put sufficient emphasis on other matters. Why does it propose financial contributions for loss of tree cover but not for loss of sunlight to others, wind tunnel effects or loss of amenity? In the Christchurch context, the widespread demolition of much of the central city, including most of the taller buildings, and consolidation of activities into more compact precincts, has created a much more attractive City with a visual appearance and aesthetic appropriate for the size of the City, reflected in the Central City Recovery Plan issued by CERA after extensive public and expert engagement. Both residents and visitors are commenting on the attractiveness of this new look. Re-introducing unnecessarily large buildings undermines this new and attractive look. Even with setbacks and other requirements, it has the potential to detract from the amenity and value of the very substantial public and private investment made for the City’s re-build and recovery.</p>	
Marjorie Manthei/ #237.3		Seek Amendment	<p>i: Decrease maximum height in the City Centre from 90m to 60m as far north as Kilmore Street</p> <p>v. Reduce the proposed maximum heights on Victoria Street (from Salisbury Street to Bealey Avenue) to 20m</p>	
Marjorie Manthei/237.3	Anne Dingwall/ #FS2037.325	Seek Amendment	<p>i: Decrease maximum height in the City Centre from 90m to 60m as far north as Kilmore Street</p> <p>v. Reduce the proposed maximum heights on Victoria Street (from Salisbury Street to Bealey Avenue) to 20m</p> <p>I oppose an enabled height of (a) 90m in the City Centre,(b) 45m on Victoria Street.</p> <p>Reducing the maximum height in the City Centre still allows for greater density. It would also resolve the flow-on effects of the proposed heights in the HDRZ near the City Centre, especially to the north, where ‘accessibility’ is assessed as relatively low, especially compared to south of the City Centre (s32 Accessibility, 2.1.4)</p> <p>Christchurch already has adequate capacity and density. The reasons covered in the CCRP for a low-rise redeveloped central city also are still valid. I could find nothing in s32 or others reports to refute them: (i) to achieve a more compact core (ii) for better urban design (“lower buildings...encourage greater interaction with the street and public spaces”, produce less shadowing and wind tunnel effects, feel safer and are people-friendly). Low-rise would also give Christchurch a unique identify (Summary from Background to Central City Height, Appendix1, s32, Part 7).</p>	Support

Jack van Beynen/ #309.1		Oppose	[Retain existing height limits in the City Centre Zone]	
Dr Sandy Bond LLC (self)/ #317.1		Oppose	[Seeks that] the height limits reduced. [Seeks that buildings are limited to] 5-6 storey buildings as the maximum height.	

Dr Sandy Bond LLC (self)/317.1	Cambridge 137 Limited/ #FS2042.40	Oppose	[Seeks that] the height limits reduced. [Seeks that buildings are limited to] 5-6 storey buildings as the maximum height. While I agree with the need to increase density, I believe the height limits within the city center of 90metres are too high. I lived through the earthquakes 2010-2014 and during that time the CCC asked for feedback from the community of what they wanted to see when the city builds back. I seem to recall the pink sticky notes of ideas - but one was clear, that they did not want high-rise buildings - due the perceived danger of these (subsequent to two prominent buildings collapsing), and for other reasons. The need for a tiered approach building up and away from the river to preserve river views, etc. Are these views no longer relevant?	Oppose
Anna Melling/ #337.20		Seek Amendment	That maximum heights will be lowered to account for lower sun height further south.	
Luke Baker-Garters/ #344.13		Oppose	Removal of all central city maximum building height overlays.	
John Bennett/ #367.2		Seek Amendment	Lower height limit in the Central City to be...26m (10 stories).	
John Bennett/367.2	Anne Dingwall/ #FS2037.464	Seek Amendment	<p>Lower height limit in the Central City to be...26m (10 stories).</p> <p>The 90m height limit for Central city buildings ignores the Cities Blueprint which was prepared with considerable consultation and by very experienced professionals.</p> <p>Pre quake the city suffered from the effects of very tall buildings (like the PWC built by a developer with the biggest ego who wanted the tallest building in town). Those effects were felt by pedestrians and cyclists who experienced the increased high wind speeds at street level, the loss of visual amenity, and the visual and physical dominance of overly tall structures.</p> <p>Christchurch Central City has an abundance of empty land. One very tall building will soak up all tenants and businesses for years to come hampering development of the City as a whole. This was evidenced in the '80's and 90's when a number of tall buildings were built within the Central City</p>	Support

Ceres New Zealand, LLC/ #150.2		Oppose	Delete Standard 15.11.2.12	
Ceres New Zealand, LLC/150.2	Kāinga Ora/ #FS2082.67	Oppose	Delete Standard 15.11.2.12 When these standards are applied to 25 Peterborough Street and 87-93 Victoria Street, in conjunction with the height standards and overlays, any redevelopment of these properties and buildings therein will be restricted and impeded in both its height and density options. Ceres engaged several experienced architectural firms to develop concept plans for 25 Peterborough Street to deliver a multi-storey apartment or hotel development. All proposed designs are considered to deliver high quality urban design outcomes, yet none of them would 7 comply with the 'podium and tower' typology which PC14 appears to seek and consider as being the only acceptable design solution. Applying the height standards / overlays, in conjunction with the standards bullet pointed above to the redevelopment of small or unusually shaped land parcels (which are common through the city centre) will be extremely challenging. Resultant of applying these standards / overlays, in most costs, the redevelopment of any city centre zone site (including 25 Peterborough Street and 87-93 Victoria Street) will result in a financial return significantly less than that achievable through the Operative Plan. Consequentially, it may be uneconomical to develop / redevelop many city centre sites including those occupied by significantly damaged buildings (which would be left in a state of disrepair / derelict) or those undeveloped and vacant. Consequentially, Standards 15.11.2.1, 15.11.2.3, 15.11.2.9 to 15.11.2.12, and 15.11.2.14 to 15.11.2.16 and the building height overlays of PC14 do not maximise the benefits of intensification and, therefore, are contrary to Policy 3 of the NPS-UD. Kāinga Ora – Homes and Communities / #834.297		Oppose	Delete all these provisions.	
Kāinga Ora – Homes and Communities /834.297	Catholic Diocese of Christchurch/ #FS2044.118	Oppose	Delete all these provisions. These provisions, both individually and collectively act as proxies to restrict height and associated development capacity in the Central City Zone. The retention (and addition) of height rules in the City Centre zone simply does not give effect to the NPS-UD Policy 3 direction to “enable in city centre zones, building heights and density of urban form to realise as much development capacity as possible, to maximise benefits of intensification. The proposed wind standards are inappropriate (as set between 4m/s to 6m/s more than 5% annually at ground level within 100m of a proposal.) The Technical data used in support of the provision identifies that measured wind levels already typically exceed these levels without development. There is no supporting s32 considering the benefits and costs associated with this provision. “Christchurch is a relatively windy city with a background mean wind speed of about 4m/s (at 10 m above the ground). At the airport for example, the mean wind speed exceeds 4 m/s about 45% of the time, exceeds 6 m/s about 21% of time, and exceeds 8m/s about 11% of the time”. Kāinga Ora – Homes and Communities / #834.299		Oppose	Delete provision.	
Kāinga Ora – Homes and Communities /834.299	Catholic Diocese of Christchurch/ #FS2044.120	Oppose	Delete provision. These provisions, both individually and collectively act as proxies to restrict height and associated development capacity in the Central City Zone. The retention (and addition) of height rules in the City Centre zone simply does not give effect to the NPS-UD Policy 3 direction to “enable in city centre zones, building heights and density of urban form to realise as much development capacity as possible, to maximise benefits of intensification. The proposed wind standards are inappropriate (as set between 4m/s to 6m/s more than 5% annually at ground level within 100m of a proposal.) The Technical data used in support of the provision identifies that measured wind levels already typically exceed these levels without development. There is no supporting s32 considering the benefits and costs associated with this provision. “Christchurch is a relatively windy city with a background mean wind speed of about 4 m/s (at 10 m above the ground). At the airport for example, the mean wind speed exceeds 4 m/s about 45% of the time, exceeds 6 m/s about 21% of time, and exceeds 8 m/s about 11% of the time”. [Technical Advice for Wind Assessments for Christchurch Cit. Meteorology Solutions (2022). [Section 2. Context]	Support

Submission Number	Further Submission No	Position	Decision Requested	FS Position
Ceres New Zealand, LLC/ #150.5		Oppose	Delete Standard 15.11.2.16	
Ceres New Zealand, LLC/150.5	Kāinga Ora/ #FS2082.70	Oppose	Delete Standard 15.11.2.16 When these standards are applied to 25 Peterborough Street and 87-93 Victoria Street, in conjunction with the height standards and overlays, any redevelopment of these properties and buildings therein will be restricted and impeded in both its height and density options. Ceres engaged several experienced architectural firms to develop concept plans for 25 Peterborough Street to deliver a multi-storey apartment or hotel development. All proposed designs are considered to deliver high quality urban design outcomes, yet none of them would 7 comply with the ‘podium and tower’ typology which PC14 appears to seek and consider as being the only acceptable design solution. Applying the height standards / overlays, in conjunction with the standards bullet pointed above to the redevelopment of small or unusually shaped land parcels (which are common through the city centre) will be extremely challenging. Resultant of applying these standards / overlays, in most costs, the redevelopment of any city centre zone site (including 25 Peterborough Street and 87-93 Victoria Street) will result in a financial return significantly less than that achievable through the Operative Plan. Consequentially, it may be uneconomical to develop / redevelop many city centre sites including those occupied by significantly damaged buildings (which would be left in a state of disrepair / derelict) or those undeveloped and vacant. Consequentially, Standards 15.11.2.1, 15.11.2.3, 15.11.2.9 to 15.11.2.12, and 15.11.2.14 to 15.11.2.16 and the building height overlays of PC14 do not maximise the benefits of intensification and, therefore, are contrary to Policy 3 of the NPS-UD.	Oppose
Ceres New Zealand, LLC/ #150.15		Seek Amendment	Amend Rule 15.11.2.16 to include an exemption which states that clause a) does not apply to any site containing a significant heritage item.	
Ceres New Zealand, LLC/150.15	Kāinga Ora/ #FS2082.76	Seek Amendment	Amend Rule 15.11.2.16 to include an exemption which states that clause a) does not apply to any site containing a significant heritage item. The various height standards / overlays applicable to 25 Peterborough Street and 87-93 Victoria Street create confusion and will result in poor application due to the ambiguity. 6 Additionally, the various height standards / overlays are contrary to Policy 3 of the NPS-UD	Oppose
Christchurch City Council/ #751.10		Seek Amendment	[Clarify] thatthe building base [is] the part of the building below the base height (either17m or 28m) and that the tower would be the part above it.	
Christchurch City Council/751.10	Anne Dingwall/ #FS2037.832	Seek Amendment	[Clarify] thatthe building base [is] the part of the building below the base height (either17m or 28m) and that the tower would be the part above it. Atpresent, the tower is defined as the part of the building above the permittedheight (32m or 90m).	Support

Josie Schroder/780.23	Anne Dingwall/ #FS2037.761	Support	Retain the rules in 15.12 as notified. Provides greater consistency in respect to design outcomes for the central city	Support
Benjamin Love/ #799.10		Support	[Retain provisions that enable mixed uses]	
Benjamin Love/799.10	Anne Dingwall/ #FS2037.721	Support	[Retain provisions that enable mixed uses] People like the proximity of stores, services, schools, parks, public transport, and other facilities/amenities within walking distance when mixed-use zoning is allowed. Allowing for mixed-use zoning, combined with intensification will increase walkability and decrease car dependency, time spent driving, as well as personal transportation costs. New commercial (especially supermarkets, cafes, restaurants, convenience stores/dairies, and other stores selling essential items), as well as schools, other community facilities should be allowed in residential areas, especially those which are being densified. Commercial buildings can be amongst residential, and apartment buildings can the first few floors designated for commercial.	Support

Tony Pennell/ #308.10		Seek Amendment	[New built form standard to require] provision for future solar panel installation unless orientation north is impossible.	
Tony Pennell/308.10	Kāinga Ora/ #FS2082.256	Seek Amendment	[New built form standard to require] provision for future solar panel installation unless orientation north is impossible. I would suggest this as part of the future sustainability mission for our smart city development. Many of us wish to have solar power on the roof. A 12mtr building with a terrace or green roof is ideal. A 12mtr structure will probably preclude solar panels unless designed in.	Oppose
James Carr/ #519.9		Seek Amendment	Seeks the minimum lot size in Central City Mixed Use Zone is reduced. A minimum lot size of 500 square metres in the Central City Mixed Use Zone is big and is likely to discourage smaller developers from creating more interesting smaller buildings. For example, [submitter has] been working with a developer on a proposal for a rather loud building on a 250 square metre site on High Street, with a retail ground floor and perhaps five stories of apartments above. There is no good reason why such things should be discouraged. This is probably getting close to the lower size limit for a medium rise building with a single stair and lift to be economic, but it still seems to be viable, and a smaller building is a smaller financial commitment (and risk) if the developer wants to do something more daring architecturally or conceptually.	
James Carr/519.9	Anne Dingwall/ #FS2037.520	Seek Amendment		Support

Paul McNoe/ #171.5		Seek Amendment	[Reduce permitted building height] That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible	
Robert J Manthei/ #200.12		Seek Amendment	Reduce height limits	
Robert J Manthei/200.12	Southern Cross Healthcare Limited/ #FS2041.2	Seek Amendment	<p>Reduce height limits Although the Chch Central Recovery Plan (CCRP) has been revoked, “PC14 must still have regard to the directions of the CCRP under s74(2)(b)(i) of the RMA” Those directions include statements like the following: 2.1.39 – Under the CCRP, the aim was “the overall design concept for development of a greener, more accessible city with a compact core, more greenspace and a stronger built density”. A central part of the CCRP was the concept of a ‘frame’ with there being three components, “each having its own distinct character and serving to contain the commercial area. It was considered that containing the available land area in this way would address the issue of too much development capacity...” 2.2.40 – “The Frame allows the Core to expand in the future if there is demand for housing or commercial development” .2.1.41 - “lower buildings will become a defining central city feature in the medium and that a lower rise city fits in with the community’s wishes and takes into account of the economic realities and market demand for property in the Core.” Thus, even though the requirement “that the District Plan must not be inconsistent with the CCRP” has been removed, it must still be taken into account. The CCRP clearly stated that the public’s wishes were for lower heights for buildings and that there was ample capacity for expansion. There is virtually no risk of following this more conservative approach to densification, especially since a new Plan must be reviewed within 10 year of its adoption.</p>	Oppose

Atlas Quarter Residents Group (22 owners) / #224.18		Oppose	That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible	
Atlas Quarter Residents Group (22 owners) / 224.18	Kāinga Ora/ #FS2082.182	Oppose	<p>That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible</p> <p>Who we are:</p> <p>This submission is made on behalf of the following persons, all of whom own units in the Atlas Quarter, 36 Welles Street, Christchurch Central:</p> <p>Richard Ball, Athena Ellis, Phil and Lynette Stenning, Max Lucas, Paul and Jeni Neilson, Jenny Jia and Zhongyang Yuan, Piers and Emma Bayley, Rachel and Tim Scanlan, Eileen and Vernon Payne, Bruce Fraser, Eléonore Dumaine, Peter and Faye Greenwood, Alan Steel, Gillian Smeith, Chelsea Kennedy, Deborah Bowker, Kate and Mike Peers, Peter Morris, Mathilde Vachon, Barbra Pullar, Martin Rumbold and Kirsty Stewart.</p> <p>Key points:</p> <p>We support well designed intensive residential and commercial development, integrated with sustainable transport options. We have already “put our money where our mouths are” by purchasing units in the Atlas Quarter, a large and successful inner-city development of 110 residential and three commercial units.</p> <p>We oppose the greatly increased height limits proposed by Plan Change 14. They are unnecessary and inappropriate for Christchurch.</p> <p>We support the inclusion of qualifying matters to enhance design quality and urban amenity across the City.</p> <p>Relief sought:</p> <ol style="list-style-type: none"> 1. That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible. 2. Where Government legislation and regulations require increases to height limits, that these are kept to the minimum extent possible for compliance with the regulations. 3. The need for greater intensification is supported but this does not require or justify the proposed increases in height limits as permitted activities. 4. The inclusion of the qualifying criteria is supported, independent of height limits, as a means of promoting good design and ensuring new buildings do not adversely impact existing buildings designed and constructed within the current District Plan requirements. <p>Reasons:</p> <p>Following the Christchurch earthquakes, a comprehensive design process was undertaken for the City, particularly for the central city. Deliberate and well-informed decisions were made to create a liveable city, with intensified development in the central city and around suburban centres, but with lower central city height limits than previously existed. This has created a compact central city with increased densities compared to before the earthquakes, but without the height of some of the buildings that Christchurch had pre-earthquake. The consolidation has resulted in many vacant sites becoming available which are gradually being filled.</p> <p>This model was developed by looking at best practice around the world, combined with local input from residents and experts, to create an attractive and vibrant City. It set ambitious goals for increasing densities for residential living, especially in the central city and around suburban centres. It was fully integrated with future transport options and climate resilience objectives.</p> <p>It has widespread local support and was developed with considerable input and investment from Government (via CERA) and Christchurch City Council. It integrated land use and transport, seeking higher densities and more sustainable transport, as reflected in the Land Use Recovery Plan, Christchurch Central Recovery Plan and the Central City Transport Plan. It was embedded into the District Plan through an Independent Hearing Panel of experts hand-picked by the Government.</p> <p>The greatly increased height limits proposed Plan Change 14 undermines the objectives and principles that underpin the vision of the 2015 Christchurch Central Recovery Plan:</p>	Oppose

			<p><i>“To become one of the best small cities in the world, Christchurch needs a city centre that is:</i></p> <ul style="list-style-type: none"> <i>• an inspiring place to live</i> <i>• an attractive place to invest</i> <i>• the best urban environment in New Zealand.”</i> <p>The decision to limit heights was a deliberate choice in achieving this vision. The proposed changes will undermine existing investments, entered into in good faith based on the Recovery Plans, while also reducing the central city’s design coherence and creating a less attractive City.</p> <p>The many empty sites and carparks that still exist post-earthquake provide adequate future capacity for the foreseeable future, including the “competitive margin” required by Government regulations. The only apparent reason for increasing the height limits appears to be compliance with new Government regulations. If the height limits are to be increased, this change should be done to the minimum extent needed to comply with these ill-considered Government requirements. There is no other justification for the proposed rules.</p> <p>The proposed rules allow new development to be concentrated in a small number of very tall buildings, with the negative impacts such as greater shading and wind tunnels, accompanied by a continuation of many empty and ugly lots in the central city. As the vacant sites are largely filled with cheap carparking, this further undermines the stated transport sustainability and climate resilience objectives.</p> <p>The scale of the buildings permitted under PC14 is not consistent with the extensive post-earthquake developments that have already occurred. The post-quake developments have created a very attractive City which will be undermined by these proposals. Existing intensive residential developments, such as the Atlas Quarter, could be overshadowed by new buildings of nearly twice the height on the east and west, blocking sunlight. Others may be blocked to the north.</p> <p>In short, the proposal for increased heights across the City are ill-considered solutions for problems that exist in Auckland, Wellington, and possibly other centres, but are not applicable to Christchurch. The geography and existing development of these other centres constrains new development. Post-earthquake Christchurch is quite different from these other centres: it is not constrained for growth opportunities, as demonstrated by the far slower growth in property prices over recent years. Even before the earthquakes, Christchurch had far more stable (less volatile) prices than Auckland and Wellington – a trend that has persisted since at least the 1970’s. In Christchurch there is housing choice, particularly with substantial increases in the number of higher density residential apartments.</p> <p>Maximising the benefits of intensification needs to consider the dis-benefits. The proposed Plan identifies loss of tree cover as a disbenefit but does appear to put sufficient emphasis on other matters. Why does it propose financial contributions for loss of tree cover but not for loss of sunlight to others, wind tunnel effects or loss of amenity? In the Christchurch context, the widespread demolition of much of the central city, including most of the taller buildings, and consolidation of activities into more compact precincts, has created a much more attractive City with a visual appearance and aesthetic appropriate for the size of the City, reflected in the Central City Recovery Plan issued by CERA after extensive public and expert engagement. Both residents and visitors are commenting on the attractiveness of this new look. Re-introducing unnecessarily large buildings undermines this new and attractive look. Even with setbacks and other requirements, it has the potential to detract from the amenity and value of the very substantial public and private investment made for the City’s re-build and recovery.</p>	
Marjorie Manthei/ #237.4		Seek Amendment	Allow max height up to 40m from Kilmore to Salisbury St	
Steve Burns/ #276.28		Seek Amendment	Seek maximum height of 5 stories in Christchurch	
Kate Z/ #297.33		Seek Amendment	That resource consent to be required for buildings greater than two stories and all subdivisions.	
Anna Melling/ #337.21		Seek Amendment	That maximum heights will be lowered to account for lower sun height further south.	
Kate Revell/ #338.12		Seek Amendment	Restrict building heights to a maximum of 22 metres.	
Kate Revell/338.12	Cambridge 137 Limited/ #FS2042.42	Seek Amendment	Restrict building heights to a maximum of 22 metres. I oppose the increase in building height limits of 22+ metres. This includes suburban and commercial. I believe that the highest building height should be 22 metres in all areas	Oppose
Chris Neame/ #339.12		Seek Amendment	Restrict maximum height for development to 22 metres	

Chris Neame/339.12	Cambridge 137 Limited/ #FS2042.44	Seek Amendment	Restrict maximum height for development to 22 metres I oppose any development greater than height of 22 metres, in residential and commercial zones	Oppose
Luke Baker-Garters/ #344.14		Oppose	Removal of all central city maximum building height overlays.	
Marina Steinke/ #378.3		Oppose	Retain the existing height limits for the central city.	
Peter Troon/ #422.7		Seek Amendment	[Reduce] the height and density of inner city dwellings.	
Clair Higginson/ #657.6		Seek Amendment	Include a clause from '14.15.3 Impacts on neighbouring property' in relation to the change in maximum building height in the Central City Mixed Use Zone	
Mark Darbyshire/ #768.6		Seek Amendment	Amend 15.12.2.2 to allow the maximum building height to be 90m	
Waka Kotahi (NZ Transport Agency) / #805.2		Seek Amendment	[T]hat the maximum enabled height of 32m (10 storeys) for residential activities should be applied to the City Centre, rather 3 than the current proposed approach with two heights (32m in the immediate surrounds, then 20m thereafter).	
Waka Kotahi (NZ Transport Agency) /805.2	Chapman Tripp/ #FS2063.100	Seek Amendment	<p>[T]hat the maximum enabled height of 32m (10 storeys) for residential activities should be applied to the City Centre, rather 3 than the current proposed approach with two heights (32m in the immediate surrounds, then 20m thereafter).</p> <p>Waka Kotahi supports the use of walkable catchments around key commercial areas and the associated upzoning of these areas. However, the 1200m city centre walkable catchment as proposed is not supported does not reflect the walkable catchment of the city centre or realises the development capacity required by the NPS-UD. It is considered that the extent of the city centre walkable catchment should be at least 1500m for the following reasons:</p> <ul style="list-style-type: none"> • This reflects the s32 Walkability Assessment that outlines that people are generally comfortable to walk for 20min, which relates to approximately 1500m. • Christchurch is flat and relatively central to many residential neighbourhoods where people would typically use active modes of transport to get to the City Centre rather than travelling by private vehicle, which increases the walkability of the city. • As many centres as possible should be up-zoned to the fullest extent possible to provide for local services for people who will be living in the walkable catchments. Enabling additional densities in these areas will also support provision of public transport and active transport infrastructure in the future by concentrating population– Council should take a long term view approach to enabling increased density. • This achieves the objectives of the NPS-UD in creating well-functioning urban environments. 	Support

Submission Number	Further Submission No	Position	Decision Requested	FS Position
Waka Kotahi (NZ Transport Agency) / #805.15		Oppose	Delete the City Spine Transport Corridor Qualifying Matter.	
Kāinga Ora – Homes and Communities / #834.103		Oppose	Delete the Key Transport Corridors – CitySpine Qualifying Matter and all associated provisions.	
Kāinga Ora – Homes and Communities /834.103	Catholic Diocese of Christchurch/ #FS2044.72	Oppose	Delete the Key Transport Corridors – CitySpine Qualifying Matter and all associated provisions. Kāinga Ora oppose the 'CitySpine' being a qualifying matter and considers this to be inconsistent with the requirements of Section 77L. The associated rules require buildings and outdoor living spaces to be set back from spine road corridors in both residential and commercial zones. In commercial zones there is a direct conflict in urban design outcomes (and rules) where the Key Pedestrian Frontage rules require buildings to be built up to the road boundary in order to deliver good urban design outcomes and facilitate a continuous street edge (often with veranda cover for pedestrians). It is understood that the intention of the rule is to enable road widening in the future to accommodate public rapid transit. If Council's intention is to acquire land in the future to facilitate public works then it should use the designation powers available to it. Given the highly	Support

			developed nature of these existing corridors with lengthy sections of commercial property built to the road boundary, it is unclear how any corridor-long roadwidening will occur without major land acquisition and demolition.

Andrew Hill/ #582.1		Seek Amendment	<p>Following changes to provisions are requested</p> <ul style="list-style-type: none"> - 32m high limit in CCMU South Frame, 20m step back. - Greater flexibility with how the buildings are leased/used. Ie different forms of retail/office. - Allow for larger much larger office tenancy sizes than the current 450sqm Max, allow for one company to lease many tenancies. Ie a co working space company that might want to lease a 800sqm floor. A easier rule would be max open plan areas of 450sqm. - Allow for up to 70% of building to be commercial activities/services, if residential units are included in the development. - Allow for greater retail size. - For apartments above ground level, allow for only shared outdoor areas, or areas not attached to unit. Ie rooftop garden. - Restrict/reduce balcony sizes for non-ground units. - If building is a mixed development including apartments, not be restricted by setback rules till 20m. - For living area, 3 by 6 meter is far easier to achieve than 4 by 4 meter living area outlined in the changes. Alternatively a min width on the entire residential units of 4meter could also achieve similar results. <p>The street facing area is very narrow in Christchurch, making many sites very hard to develop, while meeting fire requirements, enough daylight area and be able to offer reasonable priced housing.</p>	
Josie Schroder/ #780.24		Support	Retain the rules in 15.13 as notified.

Atlas Quarter Residents Group (22 owners) / #224.19		Oppose	That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible.	
Atlas Quarter Residents Group (22 owners) /224.19	Kāinga Ora/ #FS2082.183	Oppose	<p>That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible.</p> <p>Who we are:</p> <p>This submission is made on behalf of the following persons, all of whom own units in the Atlas Quarter, 36 Welles Street, Christchurch Central:</p> <p>Richard Ball, Athena Ellis, Phil and Lynette Stenning, Max Lucas, Paul and Jeni Neilson, Jenny Jia and Zhongyang Yuan, Piers and Emma Bayley, Rachel and Tim Scanlan, Eileen and Vernon Payne, Bruce Fraser, Eléonore Dumaine, Peter and Faye Greenwood, Alan Steel, Gillian Smeith, Chelsea Kennedy, Deborah Bowker, Kate and Mike Peers, Peter Morris, Mathilde Vachon, Barbra Pullar, Martin Rumbold and Kirsty Stewart.</p>	Oppose

Key points:

We support well designed intensive residential and commercial development, integrated with sustainable transport options. We have already “put our money where our mouths are” by purchasing units in the Atlas Quarter, a large and successful inner-city development of 110 residential and three commercial units.

We oppose the greatly increased height limits proposed by Plan Change 14. They are unnecessary and inappropriate for Christchurch.

We support the inclusion of qualifying matters to enhance design quality and urban amenity across the City.

Relief sought:

1. That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible.
2. Where Government legislation and regulations require increases to height limits, that these are kept to the minimum extent possible for compliance with the regulations.
3. The need for greater intensification is supported but this does not require or justify the proposed increases in height limits as permitted activities.
4. The inclusion of the qualifying criteria is supported, independent of height limits, as a means of promoting good design and ensuring new buildings do not adversely impact existing buildings designed and constructed within the current District Plan requirements.

Reasons:

Following the Christchurch earthquakes, a comprehensive design process was undertaken for the City, particularly for the central city. Deliberate and well-informed decisions were made create a liveable city, with intensified development in the central city and around suburban centres, but with lower central city height limits than previously existed. This has created a compact central city with increased densities compared to before the earthquakes, but without the height of some of the buildings that Christchurch had pre-earthquake . The consolidation has resulted in many vacant sites becoming available which are gradually being filled.

This model was developed by looking at best practice around the world, combined with local input from residents and experts, to create an attractive and vibrant City. It set ambitious goals for increasing densities for residential living, especially in the central city and around suburban centres. It was fully integrated with future transport options and climate resilience objectives.

It has widespread local support and was developed with considerable input and investment from Government (via CERA) and Christchurch City Council. It integrated land use and transport, seeking higher densities and more sustainable transport, as reflected in the Land Use Recovery Plan, Christchurch Central Recovery Plan and the Central City Transport Plan. It was embedded into the District Plan through an Independent Hearing Panel of experts hand-picked by the Government.

The greatly increased height limits proposed Plan Change 14 undermines the objectives and principles that underpin the vision of the 2015 Christchurch Central Recovery Plan:

“To become one of the best small cities in the world, Christchurch needs a city centre that is:

- *an inspiring place to live*
- *an attractive place to invest*
- *the best urban environment in New Zealand.”*

The decision to limit heights was a deliberate choice in achieving this vision. The proposed changes will undermine existing investments, entered into in good faith based on the Recovery Plans, while also reducing the central city’s design coherence and creating a less attractive City.

The many empty sites and carparks that still exist post-earthquake provide adequate future capacity for the foreseeable future, including the “competitive margin” required by Government regulations. The only apparent reason for increasing the height limits appears to be compliance with new Government regulations. If the height limits are to be increased, this change should be done to the minimum extent needed to comply with these ill-considered Government requirements. There is no other justification for the proposed rules.

			<p>The proposed rules allow new development to be concentrated in a small number of very tall buildings, with the negative impacts such as greater shading and wind tunnels, accompanied by a continuation of many empty and ugly lots in the central city. As the vacant sites are largely filled with cheap carparking, this further undermines the stated transport sustainability and climate resilience objectives.</p> <p>The scale of the buildings permitted under PC14 is not consistent with the extensive post-earthquake developments that have already occurred. The post-quake developments have created a very attractive City which will be undermined by these proposals. Existing intensive residential developments, such as the Atlas Quarter, could be overshadowed by new buildings of nearly twice the height on the east and west, blocking sunlight. Others may be blocked to the north.</p> <p>In short, the proposal for increased heights across the City are ill-considered solutions for problems that exist in Auckland, Wellington, and possibly other centres, but are not applicable to Christchurch. The geography and existing development of these other centres constrains new development. Post-earthquake Christchurch is quite different from these other centres: it is not constrained for growth opportunities, as demonstrated by the far slower growth in property prices over recent years. Even before the earthquakes, Christchurch had far more stable (less volatile) prices than Auckland and Wellington – a trend that has persisted since at least the 1970's. In Christchurch there is housing choice, particularly with substantial increases in the number of higher density residential apartments.</p> <p>Maximising the benefits of intensification needs to consider the dis-benefits. The proposed Plan identifies loss of tree cover as a disbenefit but does appear to put sufficient emphasis on other matters. Why does it propose financial contributions for loss of tree cover but not for loss of sunlight to others, wind tunnel effects or loss of amenity? In the Christchurch context, the widespread demolition of much of the central city, including most of the taller buildings, and consolidation of activities into more compact precincts, has created a much more attractive City with a visual appearance and aesthetic appropriate for the size of the City, reflected in the Central City Recovery Plan issued by CERA after extensive public and expert engagement. Both residents and visitors are commenting on the attractiveness of this new look. Re-introducing unnecessarily large buildings undermines this new and attractive look. Even with setbacks and other requirements, it has the potential to detract from the amenity and value of the very substantial public and private investment made for the City's re-build and recovery.</p>	
Tony Pennell/ #308.11		Seek Amendment	[New built form standard to require] provision for future solar panel installation unless orientation north is impossible.	
Tony Pennell/308.11	Kāinga Ora/ #FS2082.257	Seek Amendment	[New built form standard to require] provision for future solar panel installation unless orientation north is impossible. I would suggest this as part of the future sustainability mission for our smartcity development. Many of us wish to have solar power on the roof. A 12mtr building with a terrace or green roof is ideal. A 12mtr structure will probably preclude solar panels unless designed in.	Oppose

Rosemary Fraser/ #26.9		Seek Amendment	Opposes change to height limits and having buildings 90m tall. Make sure that wind and winter conditions are taken into consideration when considering building height controls.	
Rosemary Fraser/26.9	Cambridge 137 Limited/ #FS2042.9	Seek Amendment	Opposes change to height limits and having buildings 90m tall. Make sure that wind and winter conditions are taken into consideration when considering building height controls. Wind tunnels occur between taller buildings as happens on Colombo Street between the library and TePai. As Christchurch experiences strong winds and is flat, it could create dangerous situations if there are tall buildings on both side of street. Even with appropriate foundations they would still sway terrifying people on the higher floors. Also, the taller the building the more difficult it would be to escape if there was a fire. Also, with increased shading, there is likely to be for ice on paths for longer in winter.	Oppose

ChristchurchNZ/ #760.23		Seek Amendment	<ul style="list-style-type: none"> Amend (i)(O) to read: The extent to which alternative forms of housing models and/or a range Amend (i)(P) to read: "The extent to which accessible residential units including apartments, are provided.... <p>[Retain the remainder of the provisions as notified]</p>	
Kāinga Ora – Homes and Communities / #834.287		Oppose	Delete all existing provisions and provide a suite of workable and clear rules that encourage and enable large scale redevelopment. Remove statutory impediments in Appendix 15.15.12 – Sydenham and Appendix 15.15.13 requiring 'Greenways' and 'Shared Pedestrian / Cycleways' and seek to facilitate through more appropriate means – such as negotiated purchase.	
Kāinga Ora – Homes and Communities /834.287	ChristchurchNZ/ #FS2048.17	Oppose	<p>Delete all existing provisions and provide a suite of workable and clear rules that encourage and enable large scale redevelopment. Remove statutory impediments in Appendix 15.15.12 – Sydenham and Appendix 15.15.13 requiring 'Greenways' and 'Shared Pedestrian / Cycleways' and seek to facilitate through more appropriate means – such as negotiated purchase.</p> <p>These provisions are overtly complicated, unworkable and provide inappropriate mechanisms to manage development and acquire public laneways (Appendix 15.15.12 – Sydenham and Appendix 15.15.13).</p> <p>Clarity needs to be improved in (P27) that those provisions apply to all MUZ except:</p> <p>(i) Blenheim Road / Main South Road 15.10.1.4(D1); and</p> <p>(ii) Comprehensive Housing Precinct (15.10.1.3 (RD3) and (RD4).</p> <p>Reference in 15.10.1.3(RD3) to 15.14.3.40(a)(iv) and (v) is incorrect, as these provisions do not exist. The respective matters identified in relation to 15.10.1.3(RD4) are overly excessive and broad. 15.10.1.5(NC3) has the statutory function of deeming all Comprehensive Residential Development within the precinct identified for such (at Appendix 15.15.12 and 15.15.13) noncomplying. This inconsistency and error needs to be corrected. The matters expressed in 15.14.3.40 are overly excessive and broad (effectively not restricting the matters to be assessed), lack certainty of achievement, and are absent a resource management purpose. Collectively these matters are the antithesis of the achievement of Objective 3.3.1 and Objective 3.3.2 and will disenable investment and redevelopment. Reference is sought to be made to a good quality living environment that positively contributes to local amenity as a high quality environment is contextually unobtainable in a transitioning Mixed Use Environment. The requirements in Appendix 15.15.12 – Sydenham and Appendix 15.15.13. Appendix 15.15.14 are not the most appropriate in terms of s32 of the Act, and will act to disenable redevelopment and the purpose of the Zone.</p>	Oppose

Waka Kotahi (NZ Transport Agency) / #805.16		Oppose	Delete the City Spine Transport Corridor Qualifying Matter.	
Kāinga Ora – Homes and Communities / #834.104		Oppose	Delete the Key Transport Corridors – City Spine Qualifying Matter and all associated provisions.	
Kāinga Ora – Homes and Communities /834.104	Catholic Diocese of Christchurch/ #FS2044.73	Oppose	Delete the Key Transport Corridors – City Spine Qualifying Matter and all associated provisions. Kāinga Ora oppose the 'City Spine' being a qualifying matter and considers this to be inconsistent with the requirements of Section 77L. The associated rules require buildings and outdoor living spaces to be set back from spine road corridors in both residential and commercial zones. In commercial zones there is a direct conflict in urban design outcomes (and rules) where the Key Pedestrian Frontage rules require buildings to be built up to the road boundary in order to deliver good urban design outcomes and facilitates a continuous street edge (often with veranda cover for pedestrians). It is understood that the intention of the rule is to enable road widening in the future to accommodate public rapid transit. If Council's intention is to acquire land in the future to facilitate public works then it should use the designation powers available to it. Given the highly developed nature of these existing corridors with lengthy sections of commercial property built to the road boundary, it is unclear how any corridor-long road widening will occur without major land acquisition and demolition.	Support

Kāinga Ora – Homes and Communities / #834.289		Oppose	Appendix 15.15.12 – Sydenham and Appendix 15.15.13. Appendix 15.15.14 Delete all existing provisions and provide a suite of workable and clear rules that encourage and enable large scale redevelopment. Remove statutory impediments in Appendix 15.15.12 – Sydenham and Appendix 15.15.13 requiring 'Greenways' and 'Shared Pedestrian / Cycleways' and seek to facilitate through more appropriate means – such as negotiated purchase.	
Kāinga Ora – Homes and Communities /834.289	ChristchurchNZ/ #FS2048.16	Oppose	Appendix 15.15.12 – Sydenham and Appendix 15.15.13. Appendix 15.15.14 Delete all existing provisions and provide a suite of workable and clear rules that encourage and enable large scale redevelopment. Remove statutory impediments in Appendix 15.15.12 – Sydenham and Appendix 15.15.13 requiring 'Greenways' and 'Shared Pedestrian / Cycleways' and seek to facilitate through more appropriate means – such as negotiated purchase. These provisions are overly complicated, unworkable and provide inappropriate mechanisms to manage development and acquire public laneways (Appendix 15.15.12 – Sydenham and Appendix 15.15.13). Clarity needs to be improved in (P27) that those provisions apply to all MUZ except: (i) Blenheim Road / Main South Road 15.10.1.4(D1); and (ii) Comprehensive Housing Precinct (15.10.1.3 (RD3) and (RD4). Reference in 15.10.1.3(RD3) to 15.14.3.40(a)(iv) and (v) is incorrect, as these provisions do not exist. The respective matters identified in relation to 15.10.1.3(RD4) are overly excessive and broad. 15.10.1.5(NC3) has the statutory function of deeming all Comprehensive Residential Development within the precinct identified for such (at Appendix 15.15.12 and 15.15.13) noncomplying. This inconsistency and error needs to be corrected. The matters expressed in 15.14.3.40 are overly excessive and broad (effectively not restricting the matters to be assessed), lack certainty of achievement, and are absent a resource management purpose. Collectively these matters are the antithesis of the achievement of Objective 3.3.1 and Objective 3.3.2 and will disenable investment and redevelopment. Reference is sought to be made to a good quality living environment that positively contributes to local amenity as a high quality environment is contextually unobtainable in a transitioning Mixed Use Environment. The requirements in Appendix 15.15.12 – Sydenham and Appendix 15.15.13. Appendix 15.15.14 are not the most appropriate in terms of s32 of the Act, and will act to disenable redevelopment and the purpose of the Zone.	Oppose

Kāinga Ora – Homes and Communities / #834.36		Oppose	Delete the Open Space (recreation zone) qualifying matter and any relevant provisions proposed in its entirety.	
Kāinga Ora – Homes and Communities /834.36	Catholic Diocese of Christchurch/ #FS2044.30	Oppose	Delete the Open Space (recreation zone) qualifying matter and any relevant provisions proposed in its entirety. Kāinga Ora considers this qualifying matter is unnecessary and seek that it is deleted. While the use of areas for open space purposes is identified as a qualifying matter under RMAs 770(f), the areas zoned Open Space are owned by CCC and many are administered under the Reserves Act 1977. Council ownership, and Open Space zoning, makes it unlikely that these areas will be developed for medium density housing and such development would also be contrary to the purposes for which these sites were reserved. Further, the Housing Supply Act only requires CCC to incorporate MDRS into every relevant residential zone (not Open Space Zone). The s770(f) matter is noted as being relevant for other councils where their District Plan does not include an Open Space zone and instead reserves often have a residential zoning. As with the Open Space Zones, Kāinga Ora note that the Ōtākaro 'red zone' area has been subject to detailed place based assessment, with large scale residential development not anticipated in this area.	Support

Atlas Quarter Residents Group (22 owners) / #224.20		Oppose	That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible	
Atlas Quarter Residents Group (22 owners) /224.20	Kāinga Ora/ #FS2082.184	Oppose	That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible	Oppose

Who we are:

This submission is made on behalf of the following persons, all of whom own units in the Atlas Quarter, 36 Welles Street, Christchurch Central:

Richard Ball, Athena Ellis, Phil and Lynette Stenning, Max Lucas, Paul and Jeni Neilson, Jenny Jia and Zhongyang Yuan, Piers and Emma Bayley, Rachel and Tim Scanlan, Eileen and Vernon Payne, Bruce Fraser, Eléonore Dumaine, Peter and Faye Greenwood, Alan Steel, Gillian Smeith, Chelsea Kennedy, Deborah Bowker, Kate and Mike Peers, Peter Morris, Mathilde Vachon, Barbra Pullar, Martin Rumbold and Kirsty Stewart.

Key points:

We support well designed intensive residential and commercial development, integrated with sustainable transport options. We have already “put our money where our mouths are” by purchasing units in the Atlas Quarter, a large and successful inner-city development of 110 residential and three commercial units.

We oppose the greatly increased height limits proposed by Plan Change 14. They are unnecessary and inappropriate for Christchurch.

We support the inclusion of qualifying matters to enhance design quality and urban amenity across the City.

Relief sought:

1. That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible.
2. Where Government legislation and regulations require increases to height limits, that these are kept to the minimum extent possible for compliance with the regulations.
3. The need for greater intensification is supported but this does not require or justify the proposed increases in height limits as permitted activities.
4. The inclusion of the qualifying criteria is supported, independent of height limits, as a means of promoting good design and ensuring new buildings do not adversely impact existing buildings designed and constructed within the current District Plan requirements.

Reasons:

Following the Christchurch earthquakes, a comprehensive design process was undertaken for the City, particularly for the central city. Deliberate and well-informed decisions were made create a liveable city, with intensified development in the central city and around suburban centres, but with lower central city height limits than previously existed. This has created a compact central city with increased densities compared to before the earthquakes, but without the height of some of the buildings that Christchurch had pre-earthquake . The consolidation has resulted in many vacant sites becoming available which are gradually being filled.

This model was developed by looking at best practice around the world, combined with local input from residents and experts, to create an attractive and vibrant City. It set ambitious goals for increasing densities for residential living, especially in the central city and around suburban centres. It was fully integrated with future transport options and climate resilience objectives.

It has widespread local support and was developed with considerable input and investment from Government (via CERA) and Christchurch City Council. It integrated land use and transport, seeking higher densities and more sustainable transport, as reflected in the Land Use Recovery Plan, Christchurch Central Recovery Plan and the Central City Transport Plan. It was embedded into the District Plan through an Independent Hearing Panel of experts hand-picked by the Government.

The greatly increased height limits proposed Plan Change 14 undermines the objectives and principles that underpin the vision of the 2015 Christchurch Central Recovery Plan:

“To become one of the best small cities in the world, Christchurch needs a city centre that is:

- *an inspiring place to live*
- *an attractive place to invest*
- *the best urban environment in New Zealand.”*

			<p>The decision to limit heights was a deliberate choice in achieving this vision. The proposed changes will undermine existing investments, entered into in good faith based on the Recovery Plans, while also reducing the central city’s design coherence and creating a less attractive City.</p> <p>The many empty sites and carparks that still exist post-earthquake provide adequate future capacity for the foreseeable future, including the “competitive margin” required by Government regulations. The only apparent reason for increasing the height limits appears to be compliance with new Government regulations. If the height limits are to be increased, this change should be done to the minimum extent needed to comply with these ill-considered Government requirements. There is no other justification for the proposed rules.</p> <p>The proposed rules allow new development to be concentrated in a small number of very tall buildings, with the negative impacts such as greater shading and wind tunnels, accompanied by a continuation of many empty and ugly lots in the central city. As the vacant sites are largely filled with cheap carparking, this further undermines the stated transport sustainability and climate resilience objectives.</p> <p>The scale of the buildings permitted under PC14 is not consistent with the extensive post-earthquake developments that have already occurred. The post-quake developments have created a very attractive City which will be undermined by these proposals. Existing intensive residential developments, such as the Atlas Quarter, could be overshadowed by new buildings of nearly twice the height on the east and west, blocking sunlight. Others may be blocked to the north.</p> <p>In short, the proposal for increased heights across the City are ill-considered solutions for problems that exist in Auckland, Wellington, and possibly other centres, but are not applicable to Christchurch. The geography and existing development of these other centres constrains new development. Post-earthquake Christchurch is quite different from these other centres: it is not constrained for growth opportunities, as demonstrated by the far slower growth in property prices over recent years. Even before the earthquakes, Christchurch had far more stable (less volatile) prices than Auckland and Wellington – a trend that has persisted since at least the 1970’s. In Christchurch there is housing choice, particularly with substantial increases in the number of higher density residential apartments.</p> <p>Maximising the benefits of intensification needs to consider the dis-benefits. The proposed Plan identifies loss of tree cover as a disbenefit but does appear to put sufficient emphasis on other matters. Why does it propose financial contributions for loss of tree cover but not for loss of sunlight to others, wind tunnel effects or loss of amenity? In the Christchurch context, the widespread demolition of much of the central city, including most of the taller buildings, and consolidation of activities into more compact precincts, has created a much more attractive City with a visual appearance and aesthetic appropriate for the size of the City, reflected in the Central City Recovery Plan issued by CERA after extensive public and expert engagement. Both residents and visitors are commenting on the attractiveness of this new look. Re-introducing unnecessarily large buildings undermines this new and attractive look. Even with setbacks and other requirements, it has the potential to detract from the amenity and value of the very substantial public and private investment made for the City’s re-build and recovery.</p>

Atlas Quarter Residents Group (22 owners) /224.21	Kāinga Ora/ #FS2082.185	Oppose	<p>That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible.</p> <p>Who we are:</p> <p>This submission is made on behalf of the following persons, all of whom own units in the Atlas Quarter, 36 Welles Street, Christchurch Central:</p> <p>Richard Ball, Athena Ellis, Phil and Lynette Stenning, Max Lucas, Paul and Jeni Neilson, Jenny Jia and Zhongyang Yuan, Piers and Emma Bayley, Rachel and Tim Scanlan, Eileen and Vernon Payne, Bruce Fraser, Eléonore Dumaine, Peter and Faye Greenwood, Alan Steel, Gillian Smeith, Chelsea Kennedy, Deborah Bowker, Kate and Mike Peers, Peter Morris, Mathilde Vachon, Barbra Pullar, Martin Rumbold and Kirsty Stewart.</p> <p>Key points:</p> <p>We support well designed intensive residential and commercial development, integrated with sustainable transport options. We have already “put our money where our mouths are” by purchasing units in the Atlas Quarter, a large and successful inner-city development of 110 residential and three commercial units.</p> <p>We oppose the greatly increased height limits proposed by Plan Change 14. They are unnecessary and inappropriate for Christchurch.</p> <p>We support the inclusion of qualifying matters to enhance design quality and urban amenity across the City.</p> <p>Relief sought:</p> <ol style="list-style-type: none"> 1. That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible. 2. Where Government legislation and regulations require increases to height limits, that these are kept to the minimum extent possible for compliance with the regulations. 3. The need for greater intensification is supported but this does not require or justify the proposed increases in height limits as permitted activities. 4. The inclusion of the qualifying criteria is supported, independent of height limits, as a means of promoting good design and ensuring new buildings do not adversely impact existing buildings designed and constructed within the current District Plan requirements. <p>Reasons:</p> <p>Following the Christchurch earthquakes, a comprehensive design process was undertaken for the City, particularly for the central city. Deliberate and well-informed decisions were made create a liveable city, with intensified development in the central city and around suburban centres, but with lower central city height limits than previously existed. This has created a compact central city with increased densities compared to before the earthquakes, but without the height of some of the buildings that Christchurch had pre-earthquake . The consolidation has resulted in many vacant sites becoming available which are gradually being filled.</p> <p>This model was developed by looking at best practice around the world, combined with local input from residents and experts, to create an attractive and vibrant City. It set ambitious goals for increasing densities for residential living, especially in the central city and around suburban centres. It was fully integrated with future transport options and climate resilience objectives.</p> <p>It has widespread local support and was developed with considerable input and investment from Government (via CERA) and Christchurch City Council. It integrated land use and transport, seeking higher densities and more sustainable transport, as reflected in the Land Use Recovery Plan,</p>	Oppose

			<p>Christchurch Central Recovery Plan and the Central City Transport Plan. It was embedded into the District Plan through an Independent Hearing Panel of experts hand-picked by the Government.</p> <p>The greatly increased height limits proposed Plan Change 14 undermines the objectives and principles that underpin the vision of the 2015 Christchurch Central Recovery Plan:</p> <p><i>“To become one of the best small cities in the world, Christchurch needs a city centre that is:</i></p> <ul style="list-style-type: none"> • <i>an inspiring place to live</i> • <i>an attractive place to invest</i> • <i>the best urban environment in New Zealand.”</i> <p>The decision to limit heights was a deliberate choice in achieving this vision. The proposed changes will undermine existing investments, entered into in good faith based on the Recovery Plans, while also reducing the central city’s design coherence and creating a less attractive City.</p> <p>The many empty sites and carparks that still exist post-earthquake provide adequate future capacity for the foreseeable future, including the “competitive margin” required by Government regulations. The only apparent reason for increasing the height limits appears to be compliance with new Government regulations. If the height limits are to be increased, this change should be done to the minimum extent needed to comply with these ill-considered Government requirements. There is no other justification for the proposed rules.</p> <p>The proposed rules allow new development to be concentrated in a small number of very tall buildings, with the negative impacts such as greater shading and wind tunnels, accompanied by a continuation of many empty and ugly lots in the central city. As the vacant sites are largely filled with cheap carparking, this further undermines the stated transport sustainability and climate resilience objectives.</p> <p>The scale of the buildings permitted under PC14 is not consistent with the extensive post-earthquake developments that have already occurred. The post-quake developments have created a very attractive City which will be undermined by these proposals. Existing intensive residential developments, such as the Atlas Quarter, could be overshadowed by new buildings of nearly twice the height on the east and west, blocking sunlight. Others may be blocked to the north.</p> <p>In short, the proposal for increased heights across the City are ill-considered solutions for problems that exist in Auckland, Wellington, and possibly other centres, but are not applicable to Christchurch. The geography and existing development of these other centres constrains new development. Post-earthquake Christchurch is quite different from these other centres: it is not constrained for growth opportunities, as demonstrated by the far slower growth in property prices over recent years. Even before the earthquakes, Christchurch had far more stable (less volatile) prices than Auckland and Wellington – a trend that has persisted since at least the 1970’s. In Christchurch there is housing choice, particularly with substantial increases in the number of higher density residential apartments.</p> <p>Maximising the benefits of intensification needs to consider the dis-benefits. The proposed Plan identifies loss of tree cover as a disbenefit but does appear to put sufficient emphasis on other matters. Why does it propose financial contributions for loss of tree cover but not for loss of sunlight to others, wind tunnel effects or loss of amenity? In the Christchurch context, the widespread demolition of much of the central city, including most of the taller buildings, and consolidation of activities into more compact precincts, has created a much more attractive City with a visual appearance and aesthetic appropriate for the size of the City, reflected in the Central City Recovery Plan issued by CERA after extensive public and expert engagement. Both residents and visitors are commenting on the attractiveness of this new look. Re-introducing unnecessarily large buildings undermines this new and attractive look. Even with setbacks and other requirements, it has the potential to detract from the amenity and value of the very substantial public and private investment made for the City’s re-build and recovery.</p>

Richard Ball, Athena Ellis, Phil and Lynette Stenning, Max Lucas, Paul and Jeni Neilson, Jenny Jia and Zhongyang Yuan, Piers and Emma Bayley, Rachel and Tim Scanlan, Eileen and Vernon Payne, Bruce Fraser, Eléonore Dumaine, Peter and Faye Greenwood, Alan Steel, Gillian Smeith, Chelsea Kennedy, Deborah Bowker, Kate and Mike Peers, Peter Morris, Mathilde Vachon, Barbra Pullar, Martin Rumbold and Kirsty Stewart.

Key points:

We support well designed intensive residential and commercial development, integrated with sustainable transport options. We have already “put our money where our mouths are” by purchasing units in the Atlas Quarter, a large and successful inner-city development of 110 residential and three commercial units.

We oppose the greatly increased height limits proposed by Plan Change 14. They are unnecessary and inappropriate for Christchurch.

We support the inclusion of qualifying matters to enhance design quality and urban amenity across the City.

Relief sought:

1. That the permitted height limits within the existing District Plan (prior to PC14) are retained to the maximum extent possible.
2. Where Government legislation and regulations require increases to height limits, that these are kept to the minimum extent possible for compliance with the regulations.
3. The need for greater intensification is supported but this does not require or justify the proposed increases in height limits as permitted activities.
4. The inclusion of the qualifying criteria is supported, independent of height limits, as a means of promoting good design and ensuring new buildings do not adversely impact existing buildings designed and constructed within the current District Plan requirements.

Reasons:

Following the Christchurch earthquakes, a comprehensive design process was undertaken for the City, particularly for the central city. Deliberate and well-informed decisions were made create a liveable city, with intensified development in the central city and around suburban centres, but with lower central city height limits than previously existed. This has created a compact central city with increased densities compared to before the earthquakes, but without the height of some of the buildings that Christchurch had pre-earthquake . The consolidation has resulted in many vacant sites becoming available which are gradually being filled.

This model was developed by looking at best practice around the world, combined with local input from residents and experts, to create an attractive and vibrant City. It set ambitious goals for increasing densities for residential living, especially in the central city and around suburban centres. It was fully integrated with future transport options and climate resilience objectives.

It has widespread local support and was developed with considerable input and investment from Government (via CERA) and Christchurch City Council. It integrated land use and transport, seeking higher densities and more sustainable transport, as reflected in the Land Use Recovery Plan, Christchurch Central Recovery Plan and the Central City Transport Plan. It was embedded into the District Plan through an Independent Hearing Panel of experts hand-picked by the Government.

The greatly increased height limits proposed Plan Change 14 undermines the objectives and principles that underpin the vision of the 2015 Christchurch Central Recovery Plan:

“To become one of the best small cities in the world, Christchurch needs a city centre that is:

- *an inspiring place to live*
- *an attractive place to invest*
- *the best urban environment in New Zealand.”*

The decision to limit heights was a deliberate choice in achieving this vision. The proposed changes will undermine existing investments, entered into in good faith based on the Recovery Plans, while also reducing the central city’s design coherence and creating a less attractive City.

The many empty sites and carparks that still exist post-earthquake provide adequate future capacity for the foreseeable future, including the “competitive margin” required by Government regulations. The only apparent reason for increasing the height limits appears to be compliance with

			<p>new Government regulations. If the height limits are to be increased, this change should be done to the minimum extent needed to comply with these ill-considered Government requirements. There is no other justification for the proposed rules.</p> <p>The proposed rules allow new development to be concentrated in a small number of very tall buildings, with the negative impacts such as greater shading and wind tunnels, accompanied by a continuation of many empty and ugly lots in the central city. As the vacant sites are largely filled with cheap carparking, this further undermines the stated transport sustainability and climate resilience objectives.</p> <p>The scale of the buildings permitted under PC14 is not consistent with the extensive post-earthquake developments that have already occurred. The post-quake developments have created a very attractive City which will be undermined by these proposals. Existing intensive residential developments, such as the Atlas Quarter, could be overshadowed by new buildings of nearly twice the height on the east and west, blocking sunlight. Others may be blocked to the north.</p> <p>In short, the proposal for increased heights across the City are ill-considered solutions for problems that exist in Auckland, Wellington, and possibly other centres, but are not applicable to Christchurch. The geography and existing development of these other centres constrains new development. Post-earthquake Christchurch is quite different from these other centres: it is not constrained for growth opportunities, as demonstrated by the far slower growth in property prices over recent years. Even before the earthquakes, Christchurch had far more stable (less volatile) prices than Auckland and Wellington – a trend that has persisted since at least the 1970’s. In Christchurch there is housing choice, particularly with substantial increases in the number of higher density residential apartments.</p> <p>Maximising the benefits of intensification needs to consider the dis-benefits. The proposed Plan identifies loss of tree cover as a disbenefit but does appear to put sufficient emphasis on other matters. Why does it propose financial contributions for loss of tree cover but not for loss of sunlight to others, wind tunnel effects or loss of amenity? In the Christchurch context, the widespread demolition of much of the central city, including most of the taller buildings, and consolidation of activities into more compact precincts, has created a much more attractive City with a visual appearance and aesthetic appropriate for the size of the City, reflected in the Central City Recovery Plan issued by CERA after extensive public and expert engagement. Both residents and visitors are commenting on the attractiveness of this new look. Re-introducing unnecessarily large buildings undermines this new and attractive look. Even with setbacks and other requirements, it has the potential to detract from the amenity and value of the very substantial public and private investment made for the City’s re-build and recovery.</p>

Tasha Tan/ #493.3		Seek Amendment	Decision Sought:More public green spaces allocated within areas zoned for mixed use development.	
Kāinga Ora – Homes and Communities / #834.33		Oppose	<p>18.4-18.96.1A[sic] Qualifying matters.</p> <p>Delete the Open Space (recreation zone)qualifying matter and any relevantprovisions proposed in its entirety.</p>	

Kāinga Ora – Homes and Communities /834.33	Waipuna Halswell Hornby Riccarton Community Board/ #FS2027.11	Oppose	<p>18.4-18.96.1A[sic] Qualifying matters.</p> <p>Delete the Open Space (recreation zone)qualifying matter and any relevantprovisions proposed in its entirety.</p> <p>Kāinga Ora considers thisqualifying matter isunnecessary and seek that it isdeleted.While the use of areas for openspace purposes is identified asa qualifying matter under RMAs770(f), the areas zoned OpenSpace are owned by CCC andmany are administered underthe Reserves Act 1977. Councilownership, and Open Spacezoning, makes it unlikely thatthese areas will be developedfor medium density housing andsuch development would also be contrary to the purposes forwhich these sites werereserved. Further, the HousingSupply Act only requires CCC to incorporate MDRS into everyrelevant residential zone (notOpen Space Zone).The s770(f) matter is noted asbeing relevant for other councilswhere their District Plan doesnot include an Open Spacezone and instead reservesoften have a residential zoning.As with the Open Space Zones,Kāinga Ora note that theŌtākaro ‘red zone’ area hasbeen subject to detailed placebased assessment, with largescale residential developmentnot anticipated in this area.</p>	Oppose

Greg Olive/ #2.4		Seek Amendment	Delete Qualifying Matter Open Space/ Waterbody from 65 and 67 Richmond Avenue.	
Ngāi Tahu Property/ #4.3		Seek Amendment	Rezone the site at 35 Steadman Road, Karamu (Lot 2 Deposited Plan 541604) from Medium Residential Zone to be Future Urban Zone.	
Patricia Dench/ #19.2		Seek Amendment	Fairview Street should be within a Residential Character Area.	
Alastair Grigg/ #28.4		Seek Amendment	[Consider applying the Qualifying Matter Waste Water Constraint in the Merivale Area].	
Rhys Davidson/ #43.1		Support	Support inclusion of Ryan Street in a Residential Character Area.	
Alice Mckenzie/ #84.1		Oppose	That the Deans Avenue Precinct remains a Medium Residential Zone.	
Alice Mckenzie/84.1	Waipuna Halswell Hornby Riccarton Community Board/ #FS2027.12	Oppose	<p>That the Deans Avenue Precinct remains a Medium Residential Zone.</p> <p>The reasons for opposition are as follows:</p> <p>Deans Avenue Precinct does not meet the criteria of Clause 14.2.7.2 - The Deans Avenue area is not within walking distance of the city centre (1.2 kilometres) or a local shopping centre (Riccarton 600m) and so it does not qualify to be included as a High Residential Zone, as proposed in the new Plan Change.</p> <p>Also, there are many other concerning consequences should the precinct become a High Residential Zone, all with negative impacts to the existing residents and any High Residential Zone newcomers. There are also long-term effects both for the Christchurch Central area and the Deans Avenue Precinct.</p> <ul style="list-style-type: none"> Higher density/buildings will negatively impact the effects of solar roof panels and even discourage their installation, which is against all our personal aspirations and governmental efforts to mitigate climate change; not just for us now, but for the future and sets a very poor example for other developments. Parking is already a concern for current residents as our streets are used by commuters, concert goers, sports fans, families, runners, walkers and other Hagley Park users. The area has also recently had a multitude of new (70 m2 and less) housing developments, which also use the roads for their own and visitor parking. It's already a major headache for us all. Higher density development with no on-site parking requirements will create a major social concern. Deans Avenue is the only access route all existing and future residents and is also a major route through Christchurch for general users. Higher density will lead to congestion and a prospective high accident area for through traffic, residents and people accessing the park. There are already new housing developments in the area providing short term rental housing and this does not encourage community involvement or care {interest in our local functions is decreasing}. More of the same will negatively impact the desirability for long-term residential use further decreasing the sense of community spirit. 	Support

			<ul style="list-style-type: none"> • A high-rise rental development adjacent to the mosque represents a major security risk - can you imagine the negative publicity for CCC and the 'heads that will roll' should another shooting incident occur from an adjacent high-rise property? <p>The Old Sales Yard area south of Mayfair Street could be treated separately as it would be significantly more suited to a major and properly planned High Residential Development. Such a development can have a second access which crosses over the railway line and onto Blenheim Road via Lowe Street and Manderville Street</p>	
Elizabeth Sawers/ #96.1		Oppose	Remove proposed High Density Residential Zone area in the Bush Inn/Church Corner area.	
Elizabeth Sawers/96.1	Anne Dingwall/ #FS2037.170	Oppose	<p>Remove proposed High Density Residential Zone area in the Bush Inn/Church Corner area.</p> <p>Church Corner should not have housing intensification up to 6 storeys high.</p> <p>The area directly impacted by these changes around the Bush Inn centre is part of the Church Corner 'village', Bush Inn is comparable in size to the Bishopdale Mall, which has less housing intensification identified. The area identified around Bush Inn is not around the immediate University area so there is less benefit to students.</p> <p>Parking is already limited and restricted in these streets, and housing intensification would make this worse and directly impact families.</p> <p>It would seem the Council has sidestepped streets with higher value houses, such as Clyde Road, that would benefit both students and the Riccarton area, and are penalising lower income long term home owners.</p>	Support
