Christchurch City Council/ #751.4		Seek Amendment	<p>Remove [all definitions that relate to the] Meadowlands Exemplar overlay:</p> <ul style="list-style-type: none"> Context and sight analysis (meadowlands) Future development allotment (meadowlands) Neighbourhood plan (meadowlands) 	
Christchurch City Council/751.4	Anne Dingwall/ #FS2037.826	Seek Amendment	<p>Remove [all definitions that relate to the] Meadowlands Exemplar overlay:</p> <ul style="list-style-type: none"> Context and sight analysis (meadowlands) Future development allotment (meadowlands) Neighbourhood plan (meadowlands) <p>These definitions are no longer required with the Meadowland Exemplar Overlay not being carried over from the Operative District Plan.</p>	Support
Christchurch City Council/751.4	Andrew Mactier/ #FS2066.1	Seek Amendment	<p>Remove [all definitions that relate to the] Meadowlands Exemplar overlay:</p> <ul style="list-style-type: none"> Context and sight analysis (meadowlands) Future development allotment (meadowlands) Neighbourhood plan (meadowlands) <p>These definitions are no longer required with the Meadowland Exemplar Overlay not being carried over from the Operative District Plan.</p>	Support
Lendlease Limited/ #855.6		Seek Amendment	<p>Amend the definition of "Commercial Centre" to include reference to the "Metropolitan Centre Zone", as follows:</p>	

			Commercial Centre means the city centre, metropolitan centres, town centres, local centres, neighbourhood centres and large format centres zoned City Centre, Metropolitan Centre, Town Centre, Local Centre, Neighbourhood Centre, Commercial Banks Peninsula and Large Format Retail zone.	
Lendlease Limited/855.6	Kāinga Ora/ #FS2082.790	Seek Amendment	<p>Amend the definition of “Commercial Centre” to include reference to the “Metropolitan Centre Zone”, as follows:</p> <p>Commercial Centre means the city centre, metropolitan centres, town centres, local centres, neighbourhood centres and large format centres zoned City Centre, Metropolitan Centre, Town Centre, Local Centre, Neighbourhood Centre, Commercial Banks Peninsula and Large Format Retail zone.</p> <p>The submitter seeks that the Hornby Commercial Core is rezoned “Metropolitan Centre Zone”. A consequential change is required to the definition of “Commercial Centre” to include reference to the “Metropolitan Centre Zone”.</p>	Support
Lendlease Limited/855.6	Vaughan Smith/ #FS2090.29	Seek Amendment	<p>Amend the definition of “Commercial Centre” to include reference to the “Metropolitan Centre Zone”, as follows:</p> <p>Commercial Centre means the city centre, metropolitan centres, town centres, local centres, neighbourhood centres and large format centres zoned City Centre, Metropolitan Centre, Town Centre, Local Centre, Neighbourhood Centre, Commercial Banks Peninsula and Large Format Retail zone.</p> <p>The submitter seeks that the Hornby Commercial Core is rezoned “Metropolitan Centre Zone”. A consequential change is required to the definition of “Commercial Centre” to include reference to the “Metropolitan Centre Zone”.</p>	Support
Lendlease Limited/ #855.8		Seek Amendment	The submitter requests Council amend the definition of “Commercial Zones” to include reference to the “Metropolitan Centre Zone”, as follows: Commercial Zones means the following zones: Town Centre Zone, Local Centre Zone, Neighbourhood Centre Zone, Commercial Banks Peninsula Zone, Large Format Retail Zone, Commercial Office Zone, Mixed Use Zone, Metropolitan Centre Zone, City Centre Zone, Central City Mixed Use Zone and Central City Mixed Use (South Frame) Zone.	
Lendlease Limited/855.8	Kāinga Ora/ #FS2082.792	Seek Amendment	The submitter requests Council amend the definition of “Commercial Zones” to include reference to the “Metropolitan Centre Zone”, as follows: Commercial	Support

			Zones means the following zones: Town Centre Zone, Local Centre Zone, Neighbourhood Centre Zone, Commercial Banks Peninsula Zone, Large Format Retail Zone, Commercial Office Zone, Mixed Use Zone, Metropolitan Centre Zone, City Centre Zone, Central City Mixed Use Zone and Central City Mixed Use (South Frame) Zone. Consequential change is required to the definition of "Commercial Zones" to include reference to the "Metropolitan Centre Zone" as requested in the submission point.	
Lendlease Limited/855.8	Vaughan Smith/ #FS2090.30	Seek Amendment	The submitter requests Council amend the definition of "Commercial Zones" to include reference to the "Metropolitan Centre Zone", as follows: Commercial Zones means the following zones: Town Centre Zone, Local Centre Zone, Neighbourhood Centre Zone, Commercial Banks Peninsula Zone, Large Format Retail Zone, Commercial Office Zone, Mixed Use Zone, Metropolitan Centre Zone, City Centre Zone, Central City Mixed Use Zone and Central City Mixed Use (South Frame) Zone. Consequential change is required to the definition of "Commercial Zones" to include reference to the "Metropolitan Centre Zone" as requested in the submission point.	Support
Lendlease Limited/ #855.9		Seek Amendment	Amend the definition of "Habitable room" as follows: Habitable room means any room used for the purposes of teaching or used as a living room, dining room, sitting room, bedroom, home office or other room specified in the District Plan to be a similarly occupied room.	
Lendlease Limited/ #855.10		Seek Amendment	Amend the definition of "Human scale" to remove the words "and lower building heights", as follows: Human scale means incorporating dimensions that result in smaller built components and lower building heights, with attention to the human experience from eye level, relative to the physical size of a person.	
Lendlease Limited/855.10	Chapman Tripp/ #FS2063.167	Seek Amendment	Amend the definition of "Human scale" to remove the words "and lower building heights", as follows: Human scale means incorporating dimensions that result in smaller built components and lower building heights, with attention to the human experience from eye level, relative to the physical size of a person. While the submitter recognises that the term "human scale" needs to be read in the context of the policies that apply, the inclusion of the words "and lower building heights" implies that a reduction in building height, below that permitted by the plan could be necessary to achieve "human scale". Such an outcome would run counter to the requirements of Policy 3 of the NPS-UD and is not supported. Amendments are therefore required to this definition to remove the words "and lower building heights".	Support
Lendlease Limited/855.10	Chapman Tripp/ #FS2064.161	Seek Amendment	Amend the definition of "Human scale" to remove the words "and lower building heights", as follows: Human scale means incorporating dimensions that result in smaller built components and lower building heights, with attention to the human experience from eye level, relative to the physical size of a person. While the submitter recognises that the term "human scale" needs to be read in the context of the policies that apply, the inclusion of the words "and lower building heights" implies that a reduction in building height, below that permitted by the plan could be necessary to achieve "human scale". Such an outcome would run counter to the requirements of Policy 3 of the NPS-UD and is not supported. Amendments are therefore required to this definition to remove the words "and lower building heights".	Seek Amendment
Lendlease Limited/ #855.11		Seek Amendment	Amend the definition of "Key Activity Centres" to include reference to the "Metropolitan Centre Zone", as follows: Key Activity Centres means.....The key activity centre in each location is land zoned either Metropolitan Centre, Town Centre or Local Centre Zone.	
Lendlease Limited/855.11	Kāinga Ora/ #FS2082.793	Seek Amendment	Amend the definition of "Key Activity Centres" to include reference to the "Metropolitan Centre Zone", as follows: Key Activity Centres means.....The key activity centre in each location is land zoned either Metropolitan Centre, Town Centre or Local Centre Zone. Consequential change is required to the definition of "Key Activity Centres" to include reference to the "Metropolitan Centre Zone"	Support
Lendlease Limited/855.11	Vaughan Smith/ #FS2090.31	Seek Amendment	Amend the definition of "Key Activity Centres" to include reference to the "Metropolitan Centre Zone", as follows: Key Activity Centres means.....The key activity centre in each location is land zoned either Metropolitan Centre, Town Centre or Local Centre Zone. Consequential change is required to the definition of "Key Activity Centres" to include reference to the "Metropolitan Centre Zone"	Support
Lendlease Limited/ #855.12		Seek Amendment	Insert a new definition of Metropolitan Centre as follows: Metropolitan Centre means areas used predominantly for a broad range of commercial, community, recreational and residential activities. The zone is a focal point for sub-regional urban catchments. The Metropolitan Centre zone includes the Key Activity Centres at Hornby, [other].	
Lendlease Limited/855.12	Kāinga Ora/ #FS2082.794	Seek Amendment	Insert a new definition of Metropolitan Centre as follows: Metropolitan Centre means areas used predominantly for a broad range of commercial, community, recreational and residential activities. The zone is a focal point for sub-regional urban catchments. The Metropolitan Centre zone includes the Key Activity Centres at Hornby, [other]. The submitter seeks that the Hornby Commercial Core is rezoned "Metropolitan Centre Zone". Consistent with the proposed definitions for other centres, a definition of "Metropolitan Centre" is required to align with the description provided within the NPS. While Lendlease has identified that Hornby functions as a Metropolitan Centre, other large Town Centres, such as Riccarton and Papanui, may also meet the status of a Metropolitan Centre and should be identified in the definition.	Support
Lendlease Limited/ #855.13		Seek Amendment	Amend the definition of Town Centre as follows and provide for any other consequential amendments.	

			<p>Town Centre means areas used predominantly for:</p> <ul style="list-style-type: none"> • in smaller urban areas, a range of commercial, community, recreational and residential activities. • in larger urban areas, a range of commercial, community, recreational and residential activities that service the needs of the immediate and neighbouring suburbs. <p>The Town Centre zones includes the centres at Belfast/Northwood, Eastgate/Linwood, Hornby, North Halswell, Papanui/Northlands, Riccarton, Shirley /Palms.</p>	
Lendlease Limited/855.13	Kāinga Ora/ #FS2082.795	Seek Amendment	<p>Amend the definition of Town Centre as follows and provide for any other consequential amendments.</p> <p>Town Centre means areas used predominantly for:</p> <ul style="list-style-type: none"> • in smaller urban areas, a range of commercial, community, recreational and residential activities. • in larger urban areas, a range of commercial, community, recreational and residential activities that service the needs of the immediate and neighbouring suburbs. <p>The Town Centre zones includes the centres at Belfast/Northwood, Eastgate/Linwood, Hornby, North Halswell, Papanui/Northlands, Riccarton, Shirley /Palms.</p> <p>The definition of Town Centre does not align with the description of the NPS. Aligning the definition of a with the description in the National Planning Standards will ensure that the proposal is consistent with this framework. It will also ensure that stakeholders, such as developers, residents, and businesses, have a clear understanding of what is meant by this term. This will reduce confusion and improve a consistent application of the District Plan. Lendlease seeks that the Hornby Commercial Core is rezoned "Metropolitan Centre Zone". A consequential change is required to the definition of "Town Centre" to delete the reference to Hornby</p>	Support
Lendlease Limited/ #855.14		Seek Amendment	<p>Amend the definition of Neighbourhood Centre, as follows:</p> <p>Means the areas zoned Neighbourhood Centre Areas used predominantly for small-scale commercial and community activities that service the needs of their immediate residential neighbourhood.</p>	
Lendlease Limited/855.14	Kāinga Ora/ #FS2082.796	Seek Amendment	<p>Amend the definition of Neighbourhood Centre, as follows:</p> <p>Means the areas zoned Neighbourhood Centre Areas used predominantly for small-scale commercial and community activities that service the needs of their immediate residential neighbourhood.</p> <p>Amendments are required to the definition of Neighbourhood Centre to ensure that it aligns with the description of the NPS.</p>	Support
Lendlease Limited/ #855.15		Seek Amendment	<p>Amend the definition of Local Centre, as follows:</p> <p>means: Areas used predominantly for a range of commercial and community activities that service the needs of the residential catchment.</p> <p>Includes the Local Centre zone at Addington, Avonhead, Beckenham, Bishopdale, Colombo/Beaumont, Cranford, Edgware, Fendalton, Ferrymead, Halswell, Hillmorton, Ilam/Clyde, Merivale, New Brighton, Northwest Belfast, Parklands, Prestons, Redcliffs, Richmond, Linwood Village, Barrington, St Martins, Sumner, Sydenham North, Sydenham South, Wairakei/Greens Road, Wigram, Woolston and Yaldhurst; and the Commercial Banks Peninsula Zone at Lyttelton and Akaroa.</p>	
Lendlease Limited/855.15	Chapman Tripp/ #FS2063.168	Seek Amendment	<p>Amend the definition of Local Centre, as follows:</p> <p>means: Areas used predominantly for a range of commercial and community activities that service the needs of the residential catchment.</p>	Seek Amendment

			Includes the Local Centre zone at Addington, Avonhead,Beckenham, Bishopdale, Colombo/Beaumont, Cranford,Edgware, Fendalton, Ferrymead, Halswell, Hillmorton,Ilam/Clyde, Merivale, New Brighton, Northwest Belfast,Parklands, Prestons, Redcliffs, Richmond, LinwoodVillage, Barrington, St Martins, Sumner, SydenhamNorth, Sydenham South, Wairakei/Greers Road,Wigram, Woolston and Yaldhurst;andthe Commercial Banks Peninsula Zone at Lyttelton andAkaroa. Amendments are required to the definition of LocalCentre to ensure that it aligns with the description ofthe NPS.	
Lendlease Limited/855.15	Chapman Tripp/ #FS2064.162	Seek Amendment	Amend the definition of Local Centre, as follows: means:Areas used predominantly for a range of commercial andcommunity activities that service the needs of theresidential catchment. Includes the Local Centre zone at Addington, Avonhead,Beckenham, Bishopdale, Colombo/Beaumont, Cranford,Edgware, Fendalton, Ferrymead, Halswell, Hillmorton,Ilam/Clyde, Merivale, New Brighton, Northwest Belfast,Parklands, Prestons, Redcliffs, Richmond, LinwoodVillage, Barrington, St Martins, Sumner, SydenhamNorth, Sydenham South, Wairakei/Greers Road,Wigram, Woolston and Yaldhurst;andthe Commercial Banks Peninsula Zone at Lyttelton andAkaroa. Amendments are required to the definition of LocalCentre to ensure that it aligns with the description ofthe NPS.	Seek Amendment
Lendlease Limited/855.15	Kāinga Ora/ #FS2082.797	Seek Amendment	Amend the definition of Local Centre, as follows: means:Areas used predominantly for a range of commercial andcommunity activities that service the needs of theresidential catchment. Includes the Local Centre zone at Addington, Avonhead,Beckenham, Bishopdale, Colombo/Beaumont, Cranford,Edgware, Fendalton, Ferrymead, Halswell, Hillmorton,Ilam/Clyde, Merivale, New Brighton, Northwest Belfast,Parklands, Prestons, Redcliffs, Richmond, LinwoodVillage, Barrington, St Martins, Sumner, SydenhamNorth, Sydenham South, Wairakei/Greers Road,Wigram, Woolston and Yaldhurst;andthe Commercial Banks Peninsula Zone at Lyttelton andAkaroa. Amendments are required to the definition of LocalCentre to ensure that it aligns with the description ofthe NPS.	Support
Lendlease Limited/ #855.16		Seek Amendment	Amend the definition of large format centre, as follows: Large format centre retail zone Means areas used predominantly for commercial,community, recreational and residential activities. Includes those commercial centres at MoorhouseAvenue, Shirley Homebase, Tower Junction, NorthlinkPapanui, SupaCenta Belfast and Chappie Place Hornbyzoned Large Format Retail Zone on the planning maps.	
Danne Mora Limited/ #903.17		Oppose	Delete definitions of “Context and site analysis”, “Future development allotment” and “Neighbourhood Plan”	
New Zealand Police/ #2005.2		Support	Retain as notified

Heritage New Zealand Pouhere Taonga (HNZPT) / #193.1		Support	[Retain the proposed] definition of alteration.	
Heritage New Zealand Pouhere Taonga (HNZPT) /193.1	Anne Dingwall/ #FS2037.269	Support	[Retain the proposed] definition of alteration. HNZPT supports these changes which strengthen andsimplify the definition of alteration. We consider this to bebeneficial in terms of reducing ambiguity and providingclear and concise guidance for users.	Support
ChristchurchNZ/ #760.29		Seek Amendment	Add a new definition for 'Accessible residential units' as follows: “For the purposes of the Mixed Use Zone(Sydenham and Waltham), means:A residential unit that is located, constructed,and configured to allow for people of all agesand abilities to move freely and independently,and meet their functional requirements, to andwithin the unit”	
ChristchurchNZ/760.29	Kāinga Ora/ #FS2082.537	Seek Amendment	Add a new definition for 'Accessible residential units' as follows: “For the purposes of the Mixed Use Zone(Sydenham and Waltham), means:A	Oppose

			<p>residential unit that is located, constructed, and configured to allow for people of all ages and abilities to move freely and independently, and meet their functional requirements, to and within the unit"</p> <p>Provisions for the Mixed Use Zone (Comprehensive Housing Precinct) seek to introduce a requirement for a minimum proportion of new residential units to be accessible. We strongly support this provision and believe that it is both necessary to ensure that satisfactory housing options are available for people at all ages and abilities. We note that whilst some residential house builders are including accessible units in their developments, it is still not sufficient to meet needs. We also note our experience that including accessibly designed units in a development does not materially affect commercial feasibility but rather can improve marketability.</p> <p>Throughout the PC14 provisions, the term 'accessible residential unit' is included and shown in green but there is no corresponding definition included. This should be remedied to improve plan clarity consistent with Objective 3.3.2.</p>	
ChristchurchNZ/ #760.30		Seek Amendment	Add a new definition for 'Apartment building' as follows: "For the purposes of the Mixed Use Zone (Sydenham and Waltham), means: A residential building that contains two or more residential units where those units are aligned vertically one on top of the other" .	
ChristchurchNZ/760.30	Kāinga Ora/ #FS2082.538	Seek Amendment	Add a new definition for 'Apartment building' as follows: "For the purposes of the Mixed Use Zone (Sydenham and Waltham), means: A residential building that contains two or more residential units where those units are aligned vertically one on top of the other" . To provide greater clarity to the intent of the definition.	Oppose
Carter Group Limited/ #814.2		Oppose	Oppose the new definition of Accessory Building. Amend to original definition.	
Carter Group Limited/814.2	Kāinga Ora/ #FS2082.832	Oppose	Oppose the new definition of Accessory Building. Amend to original definition. PC14 unnecessarily provides a distinct definition of this term for the Medium Density Residential and High Density Residential zones. This will provide conflict between zones, confusion to users of the plan, and unintended consequences including a likelihood of unnecessary and costly resource consent applications. For example, attached accessory buildings may require consent where they would otherwise be permitted in other zones (e.g. attached garages, solar heating devices, etc).	Seek Amendment
Carter Group Limited/ #814.3		Oppose	Oppose this definition of Alteration. Amend to original definition.	
Carter Group Limited/814.3	Heritage New Zealand Pouhere Taonga/ #FS2051.1	Oppose	Oppose this definition of Alteration. Amend to original definition. The definition has the effect of meaning that any change, modification or addition to a heritage item, heritage setting or heritage fabric, or a building in a heritage area will constitute an 'alteration' and trigger corresponding rules and consent requirements, irrespective of whether it impacts on heritage fabric. This will create unnecessary, costly and inefficient consent requirements, and provide no benefits irrespective of heritage.	Oppose
Carter Group Limited/814.3	Kāinga Ora/ #FS2082.833	Oppose	Oppose this definition of Alteration. Amend to original definition. The definition has the effect of meaning that any change, modification or addition to a heritage item, heritage setting or heritage fabric, or a building in a heritage area will constitute an 'alteration' and trigger corresponding rules and consent requirements, irrespective of whether it impacts on heritage fabric. This will create unnecessary, costly and inefficient consent requirements, and provide no benefits irrespective of heritage.	Seek Amendment
The Catholic Diocese of Christchurch / #823.2		Oppose	Definition of 'Accessory building'. Retain status quo.	
The Catholic Diocese of Christchurch /823.2	Anne Dingwall/ #FS2037.1234	Oppose	Definition of 'Accessory building'. Retain status quo. PC14 unnecessarily provides a distinct definition of this term for the Medium Density Residential and High Density Residential zones. This will provide conflict between zones, confusion to users of the plan, and unintended consequences including a likelihood of unnecessary and costly resource consent applications. For example, attached accessory buildings may require consent where they would otherwise be permitted in other zones (e.g. attached garages, solar heating devices, etc).	Oppose
The Catholic Diocese of Christchurch /823.2	Carter Group Limited/ #FS2045.175	Oppose	Definition of 'Accessory building'. Retain status quo. PC14 unnecessarily provides a distinct definition of this term for the Medium Density Residential and High Density Residential zones. This will provide conflict between zones, confusion to users of the plan, and unintended consequences including a likelihood of unnecessary and costly resource consent applications. For example, attached accessory buildings may require consent where they would otherwise be permitted in other zones (e.g. attached garages, solar heating devices, etc).	Support
The Catholic Diocese of Christchurch /823.2	Kāinga Ora/ #FS2082.1087	Oppose	Definition of 'Accessory building'. Retain status quo. PC14 unnecessarily provides a distinct definition of this term for the Medium Density Residential and High Density Residential zones. This will provide conflict between zones, confusion to users of the plan, and unintended consequences including a likelihood of unnecessary and costly resource consent applications. For example, attached accessory buildings may require consent where they would otherwise be permitted in other zones (e.g. attached garages, solar heating devices, etc).	Seek Amendment
The Catholic Diocese of Christchurch / #823.3		Oppose	Definition of 'Alteration". Retain status quo.	
The Catholic Diocese of Christchurch /823.3	Anne Dingwall/ #FS2037.1235	Oppose	Definition of 'Alteration". Retain status quo. The definition has the effect of meaning that any change, modification or addition to a heritage item, heritage setting or heritage fabric, or a building in a heritage area will	Oppose

			constitute an 'alteration' and trigger corresponding rules and consent requirements, irrespective of whether it impacts on heritage fabric. This will create unnecessary, costly and inefficient consent requirements, and provide no benefits in respect of heritage.

Heritage New Zealand Pouhere Taonga (HNZPT) / #193.2		Support	Retain the proposed definition for a contributory building in relation to heritage areas.	
Heritage New Zealand Pouhere Taonga (HNZPT) /193.2	Anne Dingwall/ #FS2037.270	Support	Retain the proposed definition for a contributory building in relation to heritage areas. HNZPT supports the inclusion of the definition for a contributory building in relation to heritage areas. We consider the identification and clear distinction between buildings that do and do not contribute to a heritage area will ensure the heritage areas are protected where necessary but not overly restrictive.	Support
Christchurch City Council/ #751.2		Seek Amendment	Amend the definition of "Comprehensive Residential Development" as follows: "Comprehensive residential development in relation to the Residential New Neighbourhood Zone , means a development of three four or more residential units which have been, or will be, designed, consented and constructed in an integrated manner (staged development is not precluded). It may include a concurrent or subsequent subdivision component."	
Christchurch City Council/751.2	Anne Dingwall/ #FS2037.824	Seek Amendment	Amend the definition of "Comprehensive Residential Development" as follows: "Comprehensive residential development in relation to the Residential New Neighbourhood Zone , means a development of three four or more residential units which have been, or will be, designed, consented and constructed in an integrated manner (staged development is not precluded). It may include a concurrent or subsequent subdivision component." The definition of "Comprehensive Residential Development" is proposed to be amended by deleting the reference to 'Residential New Neighbourhood Zone' to enable the application of the definition across other zones as required. To better align the definition with the Medium Density Standards permitting up to three residential units on a site, it is proposed to replace "three" residential units with "four".	Support
Christchurch City Council/751.2	ChristchurchNZ/ #FS2048.1	Seek Amendment	Amend the definition of "Comprehensive Residential Development" as follows: "Comprehensive residential development in relation to the Residential New Neighbourhood Zone , means a development of three four or more residential units which have been, or will be, designed, consented and constructed in an integrated manner (staged development is not precluded). It may include a concurrent or subsequent subdivision component." The definition of "Comprehensive Residential Development" is proposed to be amended by deleting the reference to 'Residential New Neighbourhood Zone' to enable the application of the definition across other zones as required. To better align the definition with the Medium Density Standards permitting up to three residential units on a site, it is proposed to replace "three" residential units with "four".	Support
ChristchurchNZ/ #760.32		Seek Amendment	Amend definition of 'Comprehensive residential development' to read: Comprehensive residential development in relation to the Residential New Neighbourhood Zone Future Urban Zone , means a development of three or more residential units which have been, or will be, designed, consented and constructed in an integrated manner (staged development may is not be precluded). It may include a concurrent or subsequent subdivision component.	
ChristchurchNZ/760.32	Kāinga Ora/ #FS2082.540	Seek Amendment	Amend definition of 'Comprehensive residential development' to read: Comprehensive residential development in relation to the Residential New Neighbourhood Zone Future Urban Zone , means a development of three or more residential units which have been, or will be, designed, consented and constructed in an integrated manner (staged development may is not be precluded). It may include a concurrent or subsequent subdivision component. The Mixed Use Zone relies on the definition of Comprehensive residential development as a defined term but the definition itself as notified limits the application of the term to the Future Urban Zone. The pre-engagement draft had no such limitation, which was more appropriate and should be reinstated as per our proposed relief. That would provide more clarity for plan users for a term that is not otherwise well understood	Support

Ara Poutama Aotearoa/ #259.5		Seek Amendment	[Re: Emergency and refuge accommodation] Amend the residential definitions in the CDP to ensure housing which provides for diverse needs of the community are provided for.	
Ara Poutama Aotearoa/259.5	Anne Dingwall/ #FS2037.350	Seek Amendment	<p>[Re: Emergency and refuge accommodation] Amend the residential definitions in the CDP to ensure housing which provides for diverse needs of the community are provided for.</p> <p>It is essential that the CDP as amended by PC14 enables a diverserange of households that exist within neighbourhoods, including homes that serve particular needs in ourcommunities. Those households may include those with specific health needs who are subject tosupervision and support. To support the effective functioning of the justice system and to enable AraPoutama to fulfil its statutory mandate, it should also include housing that it provides to those within its care.As outlined above, residents within that housing may receive varying levels of support and supervision, oftenfrom third party service providers. As noted above, they may also be subject to Court or Parole-Boardordered sentences and conditions, some of which may restrict when the resident can come and go from thehome without approval. Importantly, neither of these features detract from or erode the inherent residentialcharacter of the housing provided by Ara Poutama and/or third sector housing providers, nor do they giverise to any adverse effects that would distinguish that household from any other within the community. Putanother way, Ara Poutama considers there is no meaningful effects basis for distinguishing residentialactivities which include supervision, care, and support from any other residential activity.</p> <p>The decision to accommodate those persons within the community has already been made by the Courts orthe Parole Board through sentencing or release decisions. The CDP should not afford Council theopportunity to frustrate the statutory requirements under the Sentencing Act, Parole Act and Corrections Act.Imposing unnecessary consenting requirements on those activities, particularly when there is no materialeffects-based differential, risks undermining the operation of the justice system and Ara Poutama's ability tofulfil its statutory obligations.</p>	Support

			<p>In that context, to achieve a well-functioning urban environment that enables all people to provide for their social wellbeing, the relevant CDP activity definitions must clearly encompass – or at least not exclude – the diverse range of households within communities, including those that serve particular needs. Those activities must be enabled as permitted activities in relevant residential zones.</p> <p>To that end, Ara Poutama has identified a number of definitions which may be interpreted in a way that constrains the ability for PC14 and the CDP more generally to achieve those objectives.</p> <p>While included in the definition of “residential activity, emergency and refuge accommodation is not defined in the CDP, and therefore the scope of what it captures is uncertain.</p>

David Hood/ #356.1		Seek Amendment	[Regarding the definition of 'EDM Walking Distance'] [Seeks clarification on how this is measured and enacted for new buildings]	
Retirement Villages Association of New Zealand Inc/ #811.17		Not Stated	Amend definition of Elderly Person’s Housing Unit to clarify that such units are not part of retirement villages.	
Retirement Villages Association of New Zealand Inc/811.17	Summerset Group Holdings Limited/ #FS2097.13	Not Stated	Amend definition of Elderly Person’s Housing Unit to clarify that such units are not part of retirement villages. The RVA supports the differentiation between typical residential units and the housing units for older persons. However, the RVA considers it is important that these definitions are not confused with ‘retirement village’ or ‘retirement unit’. PC14 needs to clearly acknowledge the differences in terms of layout and amenity needs between retirement villages and either the term Elderly or Older Person’s housing unit.	Support

Carter Group Limited / #824.35		Support	Retain the definition for Heritage Building Code works as notified.	
Church Property Trustees / #825.3		Oppose	[Retain status quo with regard to the definition of 'Heritage setting'].	
Church Property Trustees /825.3	Anne Dingwall/ #FS2037.1227	Oppose	[Retain status quo with regard to the definition of 'Heritage setting']. The amended definition removes the wording that a setting 'together with the associated heritage item, has met the significance threshold' and instead states that 'Heritage settings have not been assessed as meeting the significance threshold for scheduling'. The submitter considers that heritage settings that do not meet the significance threshold for scheduling should not be listed, with associated regulatory requirements.	Oppose
Church Property Trustees /825.3	Heritage New Zealand Pouhere Taonga/ #FS2051.14	Oppose	[Retain status quo with regard to the definition of 'Heritage setting']. The amended definition removes the wording that a setting 'together with the associated heritage item, has met the significance threshold' and instead states that 'Heritage settings have not been assessed as meeting the significance threshold for scheduling'. The submitter considers that heritage settings that do not meet the significance threshold for scheduling should not be listed, with associated regulatory requirements.	Oppose
Fire and Emergency/ #842.1		Support	[Definition of height] Retain as notified	
Fire and Emergency/842.15	Andrew McCarthy/ #FS2081.4	Seek Amendment		Oppose

			<p>Fire and Emergency support in part:</p> <ul style="list-style-type: none"> 7.5.7(a) – that requires all vehicle access to and within a site to be in accordance with the standards set out in Table 7.5.7.1, subject to the relief sought in Table 7.5.7.1. 7.5.7(b) - to the extent that provision of passing bays may provide a hardstand area for fire appliances to operate in scenarios where vehicle accessways exceed 50m. 7.5.7(c) – to the extent that it requires either a combined vehicle-pedestrian access or a dedicated pedestrian access with associated minimum standards. Fire and Emergency request that these minimum standards be amended to provide for emergency responder access for reasons set out in Section 1.3.1 above. 7.5.7(h) – to the extent that it considers vehicle access for firefighting where a building is either located outside of a reticulated area, or further than 75m from the nearest road that is fully reticulated. This sets a minimum formed width of 3.5m and a height clearance of 4m. Section 1.3.2 of this submission sets out the minimum requirements for fire appliance access which includes a minimum of 4m vehicle access width in order to enable Fire and Emergency personnel to manoeuvre around the vehicle in an emergency. Correspondence with CCC post notification regarding Appendix 7.5.7(h) indicated that proposed changes to this clause were omitted from notification in error. Amendments are sought regarding this clause to provide sufficient access for emergency appliances. 7.5.7(n) – to the extent that it sets maximum gradients for vehicle accesses. Fire and Emergency further request amendments to the 7.5.7(n) as per relief. <p>Amend as follows:</p> <p>Appendix 7.5.7 Access design and gradient ...</p> <p>c. For developments of three or more residential units, each unit shall be accessed by either a combined vehicle-pedestrian access or a dedicated pedestrian access that is:</p> <p>(i) a minimum formed width of 3 metres in width on a straight accessway, with a formed pathway of at least 1.5m; or,</p> <p>(ii) 6.2m on a curved or cornered accessway; and,</p> <p>(iii) each access shall be from the street to the front door of the unit and any garage or parking space for that unit.</p> <p>...h. For the purposes of access for firefighting, where a building is either: i. located in an area where no fully reticulated water supply system is available; or ii. located further than 75 metres from the nearest road that has a fully reticulated water supply system including hydrants (as required by NZS 4509:2008). 75 metres is measured from the road boundary via an existing or proposed property access, to the main entry furthest from the road (Figure 7A); or</p> <p>(iii) located in the Residential Hills Precinct and is a residential unit on a rear site,</p> <p>vehicle access shall have must be a minimum formed width of 3.5 4 metres for its entire length and a height clearance of 4 metres. Such vehicle access shall be designed and maintained to be free of obstacles that could hinder access for emergency service vehicles.</p> <p>... n. The maximum gradient at any point on a vehicle access shall be in accordance with Table 7.5.7.2, except a maximum gradient of 1 in 5 (minimum 4.0 metres long transition ramps for a change of grade 1 in 8 or greater) shall apply for accesses that are identified in (g and h). For curved accesses, the maximum gradient shall be measured on the inside of a curved vehicle access.</p>	
Daresbury Ltd/ #874.3		Oppose	[Seeks to oppose the] [d]efinition of 'Heritage setting'	
Daresbury Ltd/874.3	Anne Dingwall/ #FS2037.615	Oppose	[Seeks to oppose the] [d]efinition of 'Heritage setting' The amended definition removes the wording that a setting 'together with the associated heritage item, has met the significance threshold' and instead states that 'Heritage settings have not been assessed as meeting the significance threshold for scheduling'. The submitter considers that heritage settings that do not meet the significance threshold for scheduling should not be listed, with associated regulatory requirements.	Oppose
Daresbury Ltd/874.3	Heritage New Zealand Pouhere Taonga/ #FS2051.15	Oppose	[Seeks to oppose the] [d]efinition of 'Heritage setting' The amended definition removes the wording that a setting 'together with the associated heritage item, has met the significance threshold' and instead states that 'Heritage settings have not been assessed as meeting the significance threshold for scheduling'. Canterbury Civil Defence and Emergency Management Group/ #912.1		Seek Amendment	[Regarding the definition of height] Retain as notified	
Melissa Macfarlane/ #1003.4		Seek Amendment	Amend the definition of 'Heritage fabric' to exclude 'heritage area' for, exclude heritage area buildings that are not defining or contributory.	
Melissa Macfarlane/1003.4	Heritage New Zealand Pouhere Taonga/ #FS2051.16	Seek Amendment	Amend the definition of 'Heritage fabric' to exclude 'heritage area' for, exclude heritage area buildings that are not defining or contributory. The amended definition includes 'heritage area'. As a result, it appears that all the buildings (not just the defining and contributory dwellings), and indeed 'any physical aspect' within a residential heritage area will be automatically captured in any rule covering modifications to or demolition of 'heritage fabric'. This is not justified by a heritage area approach as it is the wider heritage area and consistency in built form envelopes, building style and layout on the site that is the justification for creating residential heritage areas, rather than the fabric of the individual buildings themselves which are not individually listed. It is also inefficient and inappropriate to include buildings other than those identified as defining and contributing in the definition of heritage fabric	Oppose
Cameron Matthews/ #1048.1		Seek Amendment	[Re: definition of 'heritage investigative and temporary works'] - strike out all rules or parts of rules as they relate to Residential Heritage Areas.	
Cameron Matthews/1048.1	Heritage New Zealand Pouhere Taonga/ #FS2051.17	Seek Amendment	[Re: definition of 'heritage investigative and temporary works'] - strike out all rules or parts of rules as they relate to Residential Heritage Areas. Submission Number	Further Submission No	Position	Decision Requested	FS Position
Wayne Bond/ #684.1		Seek Amendment	[That] the wording of the definition of “Older person’s housing unit” be amended by the addition of the following words (or words to that effect): “Where the number of units is ten (10) or less then the group can be held in separate fee-simple titles with the titles encumbered by consent notice and/or a covenant or other appropriate legal instrument which ensures that the use of the unit is confined to older persons. This only applies to groups of units separate from other such units and which are not part of a nested group of neighbouring units.”	
Retirement Villages Association of New Zealand Inc/ #811.18		Not Stated	Amend definition of Older Person’s Housing Unit to clarify that such units are not part of retirement villages. Older person’s housing unit means one of a group of residential units developed or used for the accommodation of older persons, where the group is held under either one title or unit titles under the Unit Titles Act 2010 with a body corporate, and which is encumbered by a bond or other appropriate legal instrument which ensures that the use of the unit is confined to older persons. It includes any unit previously defined as an elderly person’s housing unit and excludes units as part of a retirement village	
Retirement Villages Association of New Zealand Inc/811.18	Summerset Group Holdings Limited/ #FS2097.14	Not Stated	Amend definition of Older Person’s Housing Unit to clarify that such units are not part of retirement villages. Older person’s housing unit means one of a group of residential units developed or used for the accommodation of older persons, where the group is held under either one title or unit titles under the Unit Titles Act 2010 with a body corporate, and which is encumbered by a bond or other appropriate legal instrument which ensures that the use of the unit is confined to older persons. It includes any unit previously defined as an elderly person’s housing unit and excludes units as part of a retirement village The RVA supports the differentiation between typical residential units and the housing units for older persons. However, the RVA considers it is important that these definitions are not confused with ‘retirement village’ or ‘retirement unit’. PC14 needs to clearly acknowledge the differences in terms of layout and amenity needs between retirement villages and either the term Elderly or Older Person’s housing unit.	Support

Ara Poutama Aotearoa/ #259.3		Seek Amendment	<i>[Re: Residential activity]</i> Amend the residential definitions in the CDP to ensure housing which provides for diverse needs of the community are provided for.	
Ara Poutama Aotearoa/259.3	Kāinga Ora/ #FS2082.215	Seek Amendment	<i>[Re: Residential activity]</i> Amend the residential definitions in the CDP to ensure housing which provides for diverse needs of the community are provided for. It is essential that the CDP as amended by PC14 enables a diverse range of households that exist within neighbourhoods, including homes that serve particular needs in our communities. Those households may include those with specific health needs who are subject to supervision and support. To support the effective functioning of the justice system and to enable Ara Poutama to fulfil its statutory mandate, it should also include housing that it provides to those within its care. As outlined above, residents within that housing may receive varying levels of support and supervision, often from third party service providers. As noted above, they may also be subject to Court or Parole-Board ordered sentences and conditions, some of which may restrict when the resident can come and go from the home without approval. Importantly, neither of these features detract from or erode the inherent residential character of the housing provided by Ara Poutama and/or third sector housing providers, nor do they give rise to any adverse effects that would distinguish that household from any other within the community. Put another way, Ara	Support

			<p>Poutama considers there is no meaningful effects basis for distinguishing residential activities which include supervision, care, and support from any other residential activity.</p> <p>The decision to accommodate those persons within the community has already been made by the Courts or the Parole Board through sentencing or release decisions. The CDP should not afford Council the opportunity to frustrate the statutory requirements under the Sentencing Act, Parole Act and Corrections Act. Imposing unnecessary consenting requirements on those activities, particularly when there is no material effects-based differential, risks undermining the operation of the justice system and Ara Poutama’s ability to fulfil its statutory obligations.</p> <p>In that context, to achieve a well-functioning urban environment that enables all people to provide for their social wellbeing, the relevant CDP activity definitions must clearly encompass – or at least not exclude – the diverse range of households within communities, including those that serve particular needs. Those activities must be enabled as permitted activities in relevant residential zones.</p> <p>To that end, Ara Poutama has identified a number of definitions which may be interpreted in a way that constrains the ability for PC14 and the CDP more generally to achieve those objectives.</p> <p>The definition of “residential activity” specifically excludes the use of land and/or buildings for custodialand/or supervised living accommodation where the residents are detained on the site. The definition of “sheltered housing” referenced in the definition of “residential activity” similarly excludes residential unit/swhere residents are detained on the site.</p> <p>It is not clear what constitutes “detention” in these definitions, as that term is not defined in the CDP. Thatcreates inherent uncertainty in the kind of accommodation that these exclusions do and do not cover, whichcan lead to significant issues with, and inconsistencies in, plan administration and interpretation. Toillustrate, if “detention” includes restrictions on when a resident may come and go from a property, in theory,that could cover any household that imposes a curfew, for example, a household with children or teenagers,or supported/supervised living accommodation for people with mental health needs or disabilities. It couldalso capture any household where a resident is on home detention or subject to any other Court-orderedrestriction on their ability to leave the property without prior approval. Council has previously considered thatthis exclusion also applies to the provision of supported accommodation to people within Ara Poutama’s carein the community, notwithstanding that those people are neither in custody, or are subject to any form ofphysical detention.</p> <p>Exclusion of those households from the definition of “residential activity” would, in most cases, necessitatethe need for resource consent to authorise that accommodation. That is an anomalous outcome and iscontrary to the objective of recognising and providing for the diverse needs of residential communities. InAra Poutama’s case, that interpretation has impeded its ability to provide housing and accompanyingreintegrative and rehabilitative support for people within its care.6</p> <p>In that context, if the relevant objectives of the CDP (as proposed to be amended by PC14) are to berealised, provisions like the “detained exclusion” must be clarified or removed to ensure that a diverse rangeof households within communities, including those that serve particular needs, are appropriately provided for.</p> <p>In addition to being supported by the proposed PC14 objectives above, providing a clear and certainpathway for a diverse range of housing (including housing provided by Ara Poutama) would also support theoutcomes sought by the objectives and policies of the NPS-UD to achieve well-functioning urbanenvironments that enable all people to provide for their social wellbeing, including by enabling a variety ofhomes that meet the needs of different households.</p>	
Retirement Villages Association of New Zealand Inc/ #811.16		Seek Amendment	<p>Amend ‘retirement unit’ definition to: Retirement Unit Means any unit within a retirement village that is used or designed to be used for a residential activity (whether or not it includes cooking, bathing, and toilet facilities). A retirement unit is not a residential unit. Consequential amendments to the plan to ensure no unintended consequences arise from excluding retirement units from the definition of “residential unit”.</p>	
Retirement Villages Association of New Zealand Inc/811.16	Summerset Group Holdings Limited/ #FS2097.12	Seek Amendment	<p>Amend ‘retirement unit’ definition to: Retirement Unit Means any unit within a retirement village that is used or designed to be used for a residential activity (whether or not it includes cooking, bathing, and toilet facilities). A retirement unit is not a residential unit. Consequential amendments to the plan to ensure no unintended consequences arise from excluding retirement units from the definition of “residential unit”. To give effect to its submissions on PC14, the RVA considers that a ‘retirement unit’ definition is required, as this term has proposed to be included in multiple provisions in the tables below. This definition is required to acknowledge retirement units differ from typical residential units in terms of layout and resident amenity needs. Many units in retirement villages would not qualify as “residential units”, as do</p>	Support

			not have cooking/bathing facilities. Without a new definition, the planning regime for these units will be unclear and will cause complexity in consenting processes.	
Retirement Villages Association of New Zealand Inc/ #811.19		Oppose	Amend 'retirement village' definition to PC14 and replace with the National Planning Standard definition, and delete the existing Retirement Village definition: Retirement Village Means a comprehensive residential complex or facilities used to provide residential accommodation for people who are retired and any spouses or partners of such people. It may also include any of the following for residents within the complex: recreation, leisure, supported residential care, welfare and medical facilities (inclusive of hospital care) and other non-residential activities.	
Retirement Villages Association of New Zealand Inc/811.19	Summerset Group Holdings Limited/ #FS2097.15	Oppose	Amend 'retirement village' definition to PC14 and replace with the National Planning Standard definition, and delete the existing Retirement Village definition: Retirement Village Means a comprehensive residential complex or facilities used to provide residential accommodation for people who are retired and any spouses or partners of such people. It may also include any of the following for residents within the complex: recreation, leisure, supported residential care, welfare and medical facilities (inclusive of hospital care) and other non-residential activities. To give effect to its submissions on PC14, the RVA considers that the existing 'retirement village' definition should be replaced to ensure consistency with the definition provided in the National Planning Standards used across the country. Ara Poutama Aotearoa/ #259.4		Seek Amendment	[Re: Sheltered housing] Amend the residential definitions in the CDP to ensure housing which provides for diverse needs of the community are provided for.	
Ara Poutama Aotearoa/259.4	Anne Dingwall/ #FS2037.349	Seek Amendment	[Re: Sheltered housing] Amend the residential definitions in the CDP to ensure housing which provides for diverse needs of the community are provided for. It is essential that the CDP as amended by PC14 enables a diverse range of households that exist within neighbourhoods, including homes that serve particular needs in our communities. Those households may include those with specific health needs who are subject to supervision and support. To support the effective functioning of the justice system and to enable Ara Poutama to fulfil its statutory mandate, it should also include housing that it provides to those within its care. As outlined above, residents within that housing may receive varying levels of support and supervision, often from third party service providers. As noted above, they may also be subject to Court or Parole-Board ordered sentences and conditions, some of which may restrict when the resident can come and go from the home without approval. Importantly, neither of these features detract from or erode the inherent residential character of the housing provided by Ara Poutama and/or third sector housing providers, nor do they give rise to any adverse effects that	Support

			<p>would distinguish that household from any other within the community. Put another way, Ara Poutama considers there is no meaningful effects basis for distinguishing residential activities which include supervision, care, and support from any other residential activity.</p> <p>The decision to accommodate those persons within the community has already been made by the Courts or the Parole Board through sentencing or release decisions. The CDP should not afford Council the opportunity to frustrate the statutory requirements under the Sentencing Act, Parole Act and Corrections Act. Imposing unnecessary consenting requirements on those activities, particularly when there is no material effects-based differential, risks undermining the operation of the justice system and Ara Poutama’s ability to fulfil its statutory obligations.</p> <p>In that context, to achieve a well-functioning urban environment that enables all people to provide for their social wellbeing, the relevant CDP activity definitions must clearly encompass – or at least not exclude – the diverse range of households within communities, including those that serve particular needs. Those activities must be enabled as permitted activities in relevant residential zones.</p> <p>To that end, Ara Poutama has identified a number of definitions which may be interpreted in a way that constrains the ability for PC14 and the CDP more generally to achieve those objectives.</p> <p>The definition of “residential activity” specifically excludes the use of land and/or buildings for custodial and/or supervised living accommodation where the residents are detained on the site. The definition of “sheltered housing” referenced in the definition of “residential activity” similarly excludes residential unit/s where residents are detained on the site.</p> <p>It is not clear what constitutes “detention” in these definitions, as that term is not defined in the CDP. That creates inherent uncertainty in the kind of accommodation that these exclusions do and do not cover, which can lead to significant issues with, and inconsistencies in, plan administration and interpretation. To illustrate, if “detention” includes restrictions on when a resident may come and go from a property, in theory, that could cover any household that imposes a curfew, for example, a household with children or teenagers, or supported/supervised living accommodation for people with mental health needs or disabilities. It could also capture any household where a resident is on home detention or subject to any other Court-ordered restriction on their ability to leave the property without prior approval. Council has previously considered that this exclusion also applies to the provision of supported accommodation to people within Ara Poutama’s care in the community, notwithstanding that those people are neither in custody, or are subject to any form of physical detention.</p> <p>Exclusion of those households from the definition of “residential activity” would, in most cases, necessitate the need for resource consent to authorise that accommodation. That is an anomalous outcome and is contrary to the objective of recognising and providing for the diverse needs of residential communities. In Ara Poutama’s case, that interpretation has impeded its ability to provide housing and accompanying reintegrative and rehabilitative support for people within its care. 6</p> <p>In that context, if the relevant objectives of the CDP (as proposed to be amended by PC14) are to be realised, provisions like the “detained exclusion” must be clarified or removed to ensure that a diverse range of households within communities, including those that serve particular needs, are appropriately provided for.</p> <p>In addition to being supported by the proposed PC14 objectives above, providing a clear and certain pathway for a diverse range of housing (including housing provided by Ara Poutama) would also support the outcomes sought by the objectives and policies of the NPS-UD to achieve well-functioning urban environments that enable all people to provide for their social wellbeing, including by enabling a variety of homes that meet the needs of different households.</p>

Strategic Directions > Introduction

Submission Number	Further Submission No	Position	Decision Requested	FS Position
Brighton Observatory of Environment and Economics / #53.1		Support	<p>At the outset, it is worth noting that the disbenefits of living in a sprawling city like Christchurch are already considerable. These negative impacts include transport, energy, housing (location, quality and costs), social-equity and health. Hence, we are not 'starting from zero', but are already in a negative situation where significant slices of our communities are already accruing disbenefits disproportionately.</p> <p>Generally, the benefits of intensification, particularly to a sprawling city like Christchurch include:</p> <ul style="list-style-type: none"> • increase the attractiveness and accessibility of our Garden City • helping to solve the housing crisis by increasing housing affordability, hence provide part of solution to social inequity in our city. • reducing road transport emissions (the largest component of the CHC GHG emissions profile), as more people live closer to active/public transport routes and work places • reducing the health and wellbeing/isolation impact of living in our city • decrease climate impact of the city (energy and transport emissions) • decrease the impact of the city on the environment including ecology and habitats. • increase the economic viability and vibrancy of the city: greater population density closer to amenities and services • potentially increase safety in the community • likely reduction of rates <p>For these and other reasons around how we adapt to climate change, we wish to indicate strong support for smart intensification. For Christchurch this would look like intensification in the central city, and much less in the outer suburbs. A city that is no longer growing its</p>	

			<p>territorial footprint but nonetheless increasing its population.</p> <p>Typically, this could allow:</p> <ul style="list-style-type: none"> • increase the attractiveness and accessibility of our Garden City by for example increasing tree cover and local character (e.g. Woolston Village) • Getting people out of cars onto public transport, freeing up central city land (currently car parks) for more beneficial development. • Getting people further from traffic, wider pavements, local gardens and parks, off-road cycleways • etc... <p>The alternative to allowing intensification is building more sprawling subdivisions which destroy our high value soils, and/or situated as currently on unsuitable floodplain sites, or wetlands, increasing the risk of catastrophic floods in the future.</p>	
Victoria Neighbourhood Association (VNA) / #61.11		Seek Amendment	Maintain the existing bulk and location settings of the current Plan except where the MDRS requirements are mandated by legislation.	
Victoria Neighbourhood Association (VNA) /61.11	Kāinga Ora/ #FS2082.21	Seek Amendment	<p>Maintain the existing bulk and location settings of the current Plan except where the MDRS requirements are mandated by legislation.</p> <p>We want the Council to incentivise and deliberately enable in areas of the Central City that can allow for good design and currently have little or no residential housing or existing neighbouring homes. This being for example the 7 hectares of land currently being used as new and used car sales yards are that are all within the Central City, have the best services and amenity and are within 500m walkability within the CCZ. This area mainly is captured in the boundaries of Tuam, Antigua, Durham St Sth and Moorhouse Ave.</p> <p>We request that the CCC look at demand for central city housing in a phased approach (looking 10 year horizons) and in a way that considers that social wellbeing of existing communities first and foremost. Do not over enable by providing too much capacity all at once when you are not actually being asked to do so by the NPS-UD particularly in the central city.; and there is plenty of land already available which is a view supported by developers.</p> <p>Put in place a plan to encourage removal of the 7 hectares of car yards from the city centre to create the opportunity for what was meant to be developed in these areas as part of the CCRP to create the city that the people of CHC want. If the Gov't want intensification, then hold the Gov't to account for their side of the bargain as they were the entity that failed to encourage the car yards to relocate out of the CBD in CHC.</p> <p>We want strong direction to be given to developers by CCC as to where to develop to build a better Christchurch, it is too easy for developers to develop what is already developed given known retail pricing and values, which encourages development in high value suburbs for a small gain in additional housing vs CCC incentivising new areas of high density development to open up to balance the current inequitable use of land within the CHC Central area. This is evident in the REINZ report showing highest activity in high value and enabled suburbs - this is exactly what happens when developers are set free to do what they want. The attractive areas get further developed leaving other areas untouched. This simply pushes prices up higher as we have already seen happen in recent years. The vast majority of developers seek profit pure and simple especially those that are the most active in eg. Williams Corp.</p> <p>We want the Council to incentivise development in the area to the South of Tuam Street through to Moorhouse Ave where there is an obvious lack of housing and very obvious accessibility to amenity and services and walkability. Refer Figures 2 & 3.</p>	Oppose

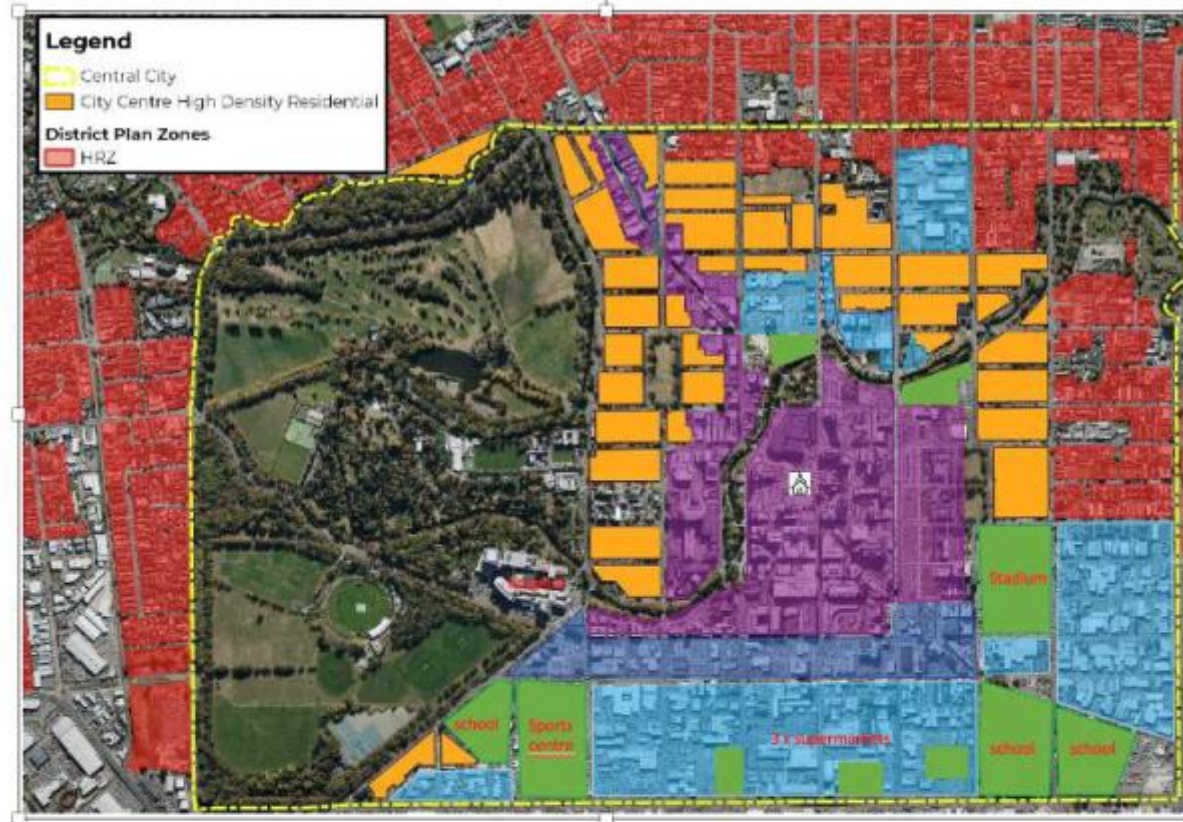

Figure 3

Locations that have the highest scores in the density enabler model shown in red.

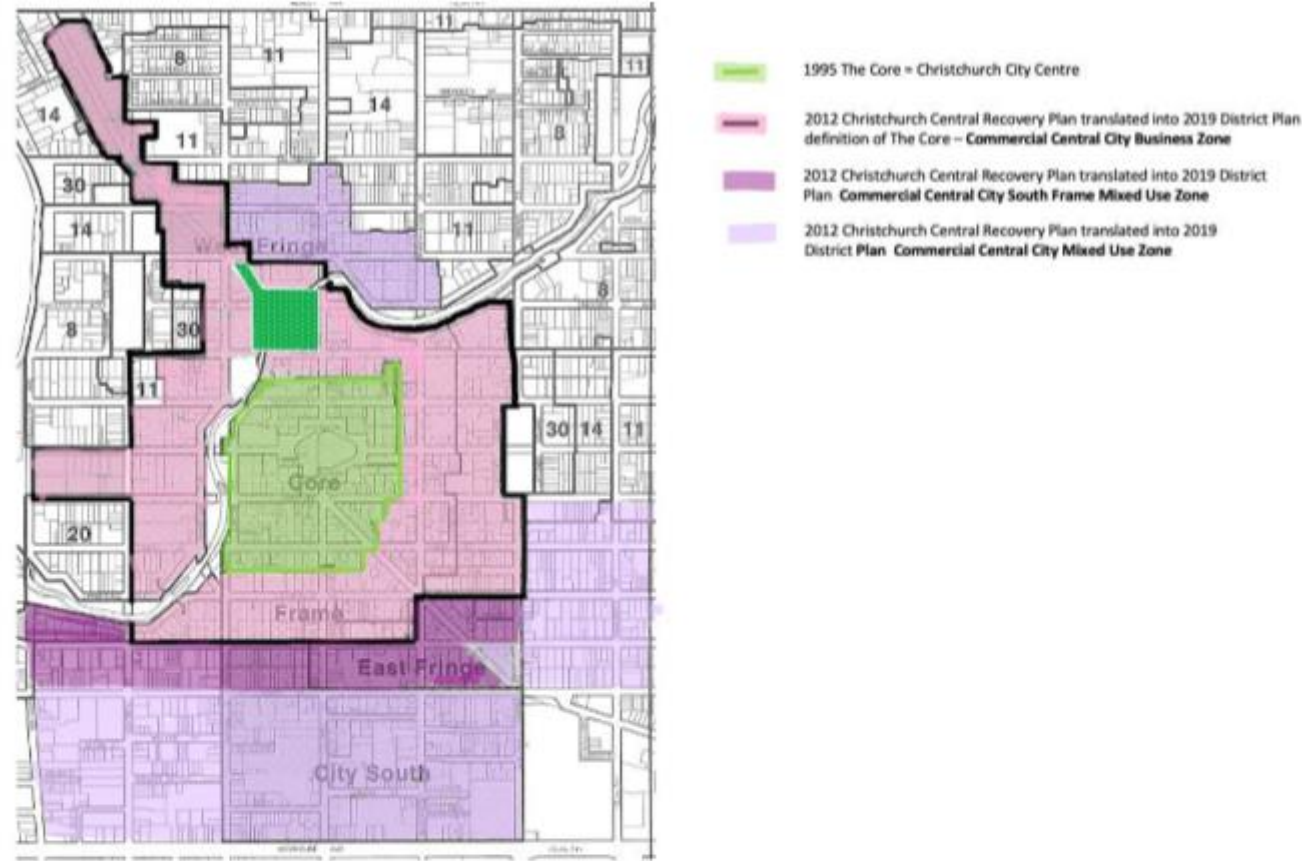

Figure 2

South side of CCZ (dark purple) and MUCC (blue and light purple) has no residential and yet has all the amenity and services (green). The CCZ proposed under PC14 retains the same footprint for the CCZ as used in the CHC District Plan 2019 and continues to include Victoria St.

We consider based on this background that it is important that PC14 does not over-enable intensification, particularly as we have seen no detailed evaluation of the potential adverse consequences of enabling substantially more intensification than is needed. We have undertaken some limited research in the time available (eg Leipzig overcapacity) but we consider this needs serious, extensive investigation to properly understand and evaluate the possible social, health, cultural, environmental, and financial effects.

In the interim we recommend that PC14 enables only the extent of intensification needed to match the expected demands of the city, with an industry-recognised reasonable margin for unexpected additional growth.

It is clearly acknowledged that the people of Christchurch (CHC) in the Christchurch Recovery Plan as a result of “Have your say” input by the people of Christchurch, want a low-rise garden city with a consolidated core. The wants of the people of CHC are not respected in the current proposed PC14 which is enabling 90m tall buildings and extending the Core (CCZ) from what it was pre-quakes.

PC14 creates a cost to the community through poor and inconsistent planning which enables oversupply, creating uncontrolled and adhoc building in the middle of residential streets especially in central city HRZ where the impact of poor design is likely to be significantly more damaging given existing small plot sizes for most. The CCC already acknowledge, as does the Property Economic Reports (July 2022) that sporadic and inconsistent building heights is not considered good urban design. Both organisations acknowledge this for the CCZ yet don’t appear to acknowledge this is also true for central city residential design such as within the proposed HRZs under PC14. Having a 6 or even a 4-storey building built right to the pavement in a street

where all other houses are 1 or 2 story and a 5m setback is not good urban planning and is a cost to the community through lack of light and sunlight and therefore a devaluing of their residential asset, which in turn impacts on their ability to fund their retirement. We understand that the CCC are required under the MDRS -UD to enable “as much as possible” but this should not be at the cost of the community and their social and cultural wellbeing, which it currently is. And the definition of “as much as possible” is being taken in isolation of all other considerations of the NPS-UD and RMA.

The CCC have taken a very literal and simplistic view of the Act and simply enabled as much as they possibly can, which is at the detriment of social, environmental, economic and cultural well-being for the existing residents of CHC and those resident for the life of the current housing stock which could be for several generations. The Council have not thought how they can enable as required by the Government and yet still meet the needs of the people of CHC, now and in the future, by enabling residential housing in the central city in a planned and control manner that meets good urban design without a cost to its residents for generations to come.

It is noted that 3.3.1 Objective - Enabling recovery and facilitating the future enhancement of the district takes priority in developing the District Plan however the proposed PC14 doesn't consider all of these aspects, in particular does not meet the needs of the EXISTING people of CHC - it is heavily skewed towards a hypothesis of future citizens of CHC, whether they come or not. In doing so, it also does not acknowledge the impact on residents of a transition period of several generations to come.

It is too easy to enable in areas that are already enabled and ruin an existing community for a potential future residential community that may never come. There appear to be many assumptions being made such as immigration to fill apartments/units and aging population being happy to live in higher density, high rise (where there is little or no garden) which seem rather misguided and high risk.

The current central city residential area in Christchurch consists of old streets and old sites, (originally for small workers cottages), many residential sites in within the 4 Avenues are therefore very small (often less than 300 sq m). It is inappropriate to enable 4-6 storey high buildings in areas without ruining the economic, social and cultural aspects of the existing community including loss of sunlight, privacy, noise pollution, inability to efficiently use passive heating, inability to grow own fruit and vegetables parking congestion, loss of value in their property and negative impacts on mental wellbeing to name some of the obvious costs. These are all costs that will be borne by both the existing and future residential communities living in current central city residential zones. It seems not equal consideration to all peoples' social and cultural needs are being treated with equal consideration in PC14, as it favours the needs of a selected future resident in a new building that may never come, and whose who now and in future occupy existing homes and whose needs could be quite different to what is being enabled.

There is plenty of opportunity to enable new HRZ housing within the CHC central city without only focusing on going higher and intensifying even more in the existing residential areas. For example: the VNA neighbourhood currently has a density of 150 households per hectare and with an average section size of 400-300m sq. There exists at least 7 hectares of land on the south side of the city that has zero households per hectare and which is zoned for mixed use. This land could be enabled for HRZ if the CCC were to think more strategically about how to actively encourage more housing the in central city AND meet the needs of the demand without over enabling, thereby also meeting the needs of the existing community AND have an excellent outcome in urban planning. The development of the South Frame in the CCRP has not moved forward in any way to make the South side of the city an attractive place to live, work and play all within 500m of the CBD.

There could easily be over 2,000 households enabled within this CCRP central city area if development for residential were to be actively encouraged by rezoning, or offering incentives, and actively discourage further density development in existing central city residential already densely developed. By doing this CCC would be proactively and meaningfully participating in the role of urban planning and signalling that the south side is where they want development. Without Council actively managing this opportunity for residential development as they did for the East frame, developers will continue to do small infill developments based on yield alone, which will not deliver the right outcomes for the city and its residents in relation to urban planning. Refer to Figures 2 & 3 which clearly show that the CHC central city is very clearly unbalanced with all the residential on one side (north) and all the services on the opposite side (south). You can't shift the amenity, but you can develop houses, which is what the Gov't is asking for.

The area that the VNA sits within already has ~150 households per hectare – this area does not need to be intensified further in the foreseeable future, whereas on the South side of the city there are 7 hectares of land currently being used to sell (mostly new) cars all within 800m of the Christ Church Cathedral. These 12 car sales yards have ZERO residential housing but could enable over 2,000 residential dwellings (ave100 sq m) assuming CCMUZ of 21m (6 storey) 60% coverage. Currently this area has very few trees so converting to residential use will also enable trees and landscaping to enhance city centre, and reduces the number of cars in the city. These objectives meet all of the Gov't and Councils city planning objectives and yet nothing continues to be done to drive these car yards out of the central city. This is currently an appalling waste of high utility land.

Furthermore, development of intensified residential homes in this area can be done in a much more intergrated manner with larger sites, and no current residential neighbours.

Add to this already compelling rationale is that this area to the South of Tuam Street has much greater services, greater walkability and greater amenity than anywhere else in the 4 avenues/central city and the Council reports already acknowledge this as a fact. Refer to figures 2 & 3.

			For residents in the VNA to walk (one way) to the nearest large supermarket is 2.2km to New World Durham St or 1.5km to Fresh Choice Merivale. The northern residential central city has all the houses with no services, yet the southern side has all the services (schools, sports centre, shopping, entertainment, cafes, medical, churches, parks)., and no housing.	
Victoria Neighbourhood Association (VNA) / #61.55		Oppose	The District Plan needs to be reviewed every 10 years,	
Victoria Neighbourhood Association (VNA) /61.55	Anne Dingwall/ #FS2037.125	Oppose	The District Plan needs to be reviewed every 10 years, Whilst having a vision of 30 years is good don't enable for 30 years in one go given the uncertainty of the world and housing demand - the fluctuations of the last 3 years have taught us that we must plan for flexibility. So do that as a minimum.	Support
Victoria Neighbourhood Association (VNA) / #61.56		Oppose	We want the Council to open areas of the city that are not being well utilised. and have greater access to walkability, services and amenity	
Victoria Neighbourhood Association (VNA) / #61.57		Seek Amendment	PC14 should consider and enable and encourage smaller businesses back into the city core.	
Victoria Neighbourhood Association (VNA) /61.57	Anne Dingwall/ #FS2037.126	Seek Amendment	PC14 should consider and enable and encourage smaller businesses back into the city core. PC14 should consider and enable and encourage smaller businesses back into the city core by having attractive smaller buildings with high aesthetic and amenity, rather than old fashioned skyscrapers and encouraging a compact city to return vibrancy to the "core.	Support
Zhijian Wang/ #102.1		Not Stated	Adding medium-density and high-density housing to established neighborhoods is not an ideal solution. Infrastructure will not be able to cope with demand, infrastructure improvements will be costly and impact on rates, and there will be further interruption with excavations and road closures. There will be increased concrete and asphalt footprints and reduced garden areas, affecting the natural infiltration of rainwater, increasing the burden on infrastructure and that may cause flooding. There will be an associated impact on Christchurch's brand as a Garden City. which has taken time to develop. Instead, the urban-rural fringe area should be developed with medium and high density residential areas within 20-30 minutes of the City Centre. This is the ideal living and working environment where infrastructure can be planned and constructed according to the needs of the next 30 years. Funding would be from investors and developers, reducing financial pressure on the City Council and maintaining the stability of rates. Construction will not affect the traffic in the city.	
Zhijian Wang/102.1	Anne Dingwall/ #FS2037.171	Not Stated	Adding medium-density and high-density housing to established neighborhoods is not an ideal solution. Infrastructure will not be able to cope with demand, infrastructure improvements will be costly and impact on rates, and there will be further interruption with excavations and road closures. There will be increased concrete and asphalt footprints and reduced garden areas, affecting the natural infiltration of rainwater, increasing the burden on infrastructure and that may cause flooding. There will be an associated impact on Christchurch's brand as a Garden City. which has taken time to develop. Instead, the urban-rural fringe area should be developed with medium and high density residential areas within 20-30 minutes of the City Centre. This is the ideal living and working environment where infrastructure can be planned and constructed according to the needs of the next 30 years. Funding would be from investors and developers, reducing financial pressure on the City Council and maintaining the stability of rates. Construction will not affect the traffic in the city. Adding medium-density and high-density housing to an already established neighborhood is not an ideal solution for the following reasons: 1. The old urban infrastructure, including power systems, domestic water and sewerage, will not be able to withstand the massive imminent population growth (next 30 years), so infrastructure improvements will be costly - more excavations and road closures. It would be a huge investment and the money would come from the property Rates of Christchurch residents, so there was no choice but to increase the property Rates.	Support

			<p>2. Addition to existing neighborhoods - medium and high density residential areas will mean increased concrete and asphalt footprints and reduced garden areas. This will affect the natural infiltration of rainwater or flood, and increase the burden on the drainage pipes. May cause urban flooding. There are many examples in the world, such as Beijing and Zhengzhou in China.</p> <p>3. Over the past 100 years, the people of Christchurch, together with urban management and planners, have created a world-renowned brand - Garden City, which is now worth at least 1 billion dollars and attracts tourists from all over the world. Tourists will be disappointed if they come to "see high-rise buildings, which is no different from Tokyo in Japan or New York in the United States. Building a brand takes decades or even a century of hard work, and destroying it can be a simple wrong decision.</p> <p>Solution: Develop the urban-rural fringe around Christchurch.</p> <p>1. Develop the urban-rural fringe area around Christchurch, build new medium-density residential areas and high-density residential areas, and drive to the city center in 20-30 minutes. This is the ideal living and working environment.</p> <p>2. The infrastructure can be planned and constructed according to the needs of the next 30 years, and the construction will not affect the traffic in the city. More importantly, these infrastructure funds will come from private investors and developers, which can reduce the financial pressure on the city council and maintain the stability of Rates. And the council can also get Rates from future new houses.</p>

Victoria Neighbourhood Association (VNA) / #61.14		Oppose	That a staged approach is taken to enable high quality urban design through planning.	
Victoria Neighbourhood Association (VNA) /61.14	Anne Dingwall/ #FS2037.102	Oppose	<p>That a staged approach is taken to enable high quality urban design through planning.</p> <p>The premise that there needs to be significantly greater housing in the central city is flawed. Council research indicates that this is not where people want to live, there have been numerous Council research studies of residents that keep saying the same thing – most people do not want to live in the city centre.</p> <p>Residents and developers do not want nor think there is a need for enablement through height as there already exists plenty of capacity in Christchurch, in fact it is widely believed we have too much capacity. The NPS-UD over enables and Council need to manage supply so as not to negatively impact the city of Christchurch or propose a plan that costs the community through negative impacts whether these be economic, environmental or social.</p> <p>The current number of household in CHC is estimated at 163,000, therefore adding 56,000 households by 2048 brings the number of households to 219,000, this enables a population of 525,600 ppl based on 2.4 ppl per household. Yet Stats NZ population medium expectations to 2048 is 463,500*. The current PC14 plan over enables by 62,000 ppl or 26,000 houses.</p> <p>Current growth of housing has slowed drastically and the growth trend is quite different to the time of the MDRS was developed by central government. This is especially true in CHC as the below Council stats show in terms of housing consents driven by market factors of supply and demand. There are numerous reports in media that the likes of Willams Corp can't sell their units and are letting them out, and the trend of investors purchasing and renting as Air BnB continues for small inner city units such as those in the East Frame.</p> <p>In the next ten years Stats NZ* predicts less than 1% population growth in CHC. Stats NZ also shows a considerable change in the age of the population; by 2048 with 60% of the Christchurch population aged 25+ will be over the age of 50. This impacts the type of housing required, and it is unlikely that this older generation will want to live in inner city apartments and houses with stairs and without a garden. Therefore, adding too much density through height is not meeting the future needs of the aging population demographic for Christchurch central city in terms of multi-storey developments, unless of course they are assisted living residents.'</p> <p>Livingstons and Associated Limited prepared a research report on housing demand and need to support the 2021 Greater Christchurch Housing Capacity Assessment. The report states that demand is likely to be strongly focused on standalone dwellings with renters having a slightly higher propensity to live in multi-unit dwellings, therefore the focus of residential development should be focussed on standalone dwellings and not in high rise apartments/townhouses in the CHC central city.</p> <p>Council research (Life in Christchurch survey 2022: https://ccc.govt.nz/the-council/how-the-council-works/reporting-and-monitoring/life-in-christchurch/central-city/) 2022 reveals that 62% of respondents said they would not consider a move to live in the city under any circumstances, and of those that would consider living in the central city most were under 24 years old. This same research tells us that two most important factors for people liking the idea of city living is access to sun and privacy.</p>	Support

			<p>Research indicating potential demand, and the proposed PC14 plan seem to be unrelated. The oversupply of central dwellings will lead to AirBnB investors (not residents) and a ghost central city and at worst central city slums.</p> <p>The obvious question therefore is who exactly is the Council enabling housing for in the central city?</p> <p>The aging population don't want apartment inner city living, students are likely to want but will not have the capability unless we build hostels, migrants may not want as Chinese, Pacific Island, Indian (our greatest immigration source) often live in larger households that are intergenerational. Is our immigration policy going to change to attract people from Europe who are very accepting of apartment living? This is unlikely.</p> <p>Throughout PC14 the Council and other reports often state that the current District Plan allows for the appropriate level of housing and acknowledges that the implementation of the MDRS -UD over enables housing supply. Is this over enablement a deliberate and forced decision by central government seeking to bring down the price of housing across all of NZ, without current homeowners realising what is actually going on as it will appear to be "market forces" at play? There are many factors that have led to NZ's over inflated house market, key factors being the duopoly of building suppliers and the highly restrictive residential housing standards – these are long standing issues that have been avoided by successive governments over the past 30 years. Supply of land is not the only issue and this should be recognised by not inflicting a blunt instrument of government interference in market forces of supply and demand to bring housing prices down by deliberately forcing an oversupply in the market, and compromising the integrity of the Council to meet the needs of their community. We also question that building higher reduces cost. We have not seen any clear evidence that this is correct in the context of Christchurch construction requirements. The Governments current monetary policy is already doing the job to cool the over inflated market, there is no need for further interference in what is meant to be a free market.</p>	
Victoria Neighbourhood Association (VNA) /61.14	Kāinga Ora/ #FS2082.25	Oppose	<p>That a staged approach is taken to enable high quality urban design through planning.</p> <p>The premise that there needs to be significantly greater housing in the central city is flawed. Council research indicates that this is not where people want to live, there have been numerous Council research studies of residents that keep saying the same thing – most people do not want to live in the city centre.</p> <p>Residents and developers do not want nor think there is a need for enablement through height as there already exists plenty of capacity in Christchurch, in fact it is widely believed we have too much capacity. Cameron Matthews/ #121.26		Oppose	Remove Strategic Objectives 3.3.7(a)(i)(A), (B), and (D) and replace these with Policy 1 of the NPS-UD.	
Cameron Matthews/121.26	Christchurch International Airport Limited/ #FS2052.216	Oppose	Remove Strategic Objectives 3.3.7(a)(i)(A), (B), and (D) and replace these with Policy 1 of the NPS-UD. The strategic objectives outlined in the proposed district plan include some subparts are too subjective, restrictive, and irrelevant to the short, medium, and long-term aspirations of the city's residents. For example, from the proposed objective 3.3.7 CCC define a well-functioning urban environment as:	Oppose

			<p><i>A well-functioning urban environment that enables all people and communities to provide for their social, economic, and cultural wellbeing, and for their health and safety, now and into the future; including by recognising and providing for;</i></p> <p><i>i. Within commercial and residential zones, a distinctive, legible urban form and strong sense of place, expressed through:</i></p> <p><i>A. Contrasting building clusters within the cityscape and the wider perspective of the Te Poho-o-Tamatea/the Port Hills and Canterbury plains; and</i></p> <p><i>B. Appropriate scale, form and location of buildings when viewed in context of the city’s natural environment and significant open spaces, providing for:</i></p> <p><i>I. Larger scale development where it can be visually absorbed within the environment; and</i></p> <p><i>II. Lower heights and design controls for development located in more sensitive environments...</i></p> <p>And:</p> <p><i>D. The clustering, scale, and massing of development in and around commercial centres, commensurate with the role of the centre and the extent of commercial and community services provided...</i></p> <p>The items in bold are emphasised by me. They represent vague aesthetic preferences, speaking to a vision of a remote skyline, or a particular expectation for a streetscape, which isn’t valued by all – or probably even most – residents. Nobody is moving to or staying in Christchurch because of these predominantly aesthetic preferences for how the city might look from the perspective of a helicopter.</p> <p>Furthermore, these CCC objectives contort the NPS-UD policy definition of well-functioning urban environments, from Policy 1 of the NPS-UD, to an urban environment which ‘functions-well’ only if your sole priority is a particular idea of visual amenity. The CCC-proposed Strategic Objectives 3.3.7(a)(i)(A), (B), and (D) are therefore, in my view, subjective, restrictive, and irrelevant to the values and aspiration of the city’s residents and should be removed from the proposal or replaced by the NPS-UD definition of a well-functioning urban environment.</p>	
Ara Poutama Aotearoa/ #259.6		Support	Supports the changes to new strategic direction objective 3.3.7 (MDRS objective 1)	
Toka Tū Ake EQC/ #377.1		Seek Amendment	Retain objective and add the following underlined: iv. The benefits of urban environments that support reductions in greenhouse gas emissions; and are resilient to natural hazards and the current and future effects of climate change.	
Winton Land Limited/ #556.2		Seek Amendment	<p>That objective 3.3.7 be amended as follows:</p> <p>3.3.7 Objective - Well-functioning urban environment</p> <p>a. A well-functioning urban environment that enables all people and communities to provide for their social, economic, and cultural wellbeing, and for their health and safety, now and into the future; including by recognising and providing for;</p>	

			<p>i. Within commercial and residential zones, a distinctive, legible urban form and strong sense of place, expressed through:</p> <p>A. Retirement Villages Association of New Zealand Inc/ #811.10		Seek Amendment	Amend 3.3.10a.ii.E. for consistency with the Enabling Housing Act or delete.	

Retirement Villages Association of New Zealand Inc/811.10	Summerset Group Holdings Limited/ #FS2097.6	Seek Amendment	Amend 3.3.10a.ii.E. for consistency with the Enabling Housing Act or delete. The RVA opposes the requirement in 3.3.10a.ii.E. to 'maintain and enhance' the city's biodiversity and amenity through tree cover. The RVA considers this direction could be highly limiting of residential activity and contrary to the intention of the NSPUD and the Enabling Housing Act. Further, it is not clear why: - This policy only applies to areas of residential activity; and - It is unclear why tree canopy has been identified for stronger protection language than the other items. The other items in 3.3.10a.ii are simply listed to be 'identified and appropriately managed'.	Support
Carter Group Limited/ #814.43		Oppose	Oppose Objective 3.3.10(ii) E. Seek that it is deleted.	
Carter Group Limited/814.43	Kāinga Ora/ #FS2082.873	Oppose	Oppose Objective 3.3.10(ii) E. Seek that it is deleted. Consistent with its submissions on subchapter 6.10A, the submitter considers the provisions relating to tree canopy cover and financial contributions in their entirety are unworkable and onerous. The submitter further notes, that if the Council are wanting to enhance and grow the City's biodiversity and amenity this should also go hand in hand with Council agreeing to accept larger and more frequent recreational reserve areas. Over the past 5– 7 years Council have pushed back against numerous developer proposals to increase reserve areas which would assist in meeting these proposed objectives.	Seek Amendment

The Board is aware that has been no geotechnical assessment or report undertaken as part of the Plan, but believes strongly that the city's proven ongoing earthquake susceptibility should be accepted as a qualifying matter and that the whole of Christchurch should not be subject to the proposed intensification requirements. See the video at https://af8.org.nz/af8-scenario re Alpine Fault risk.</p> <p>The Board stresses that if this is accepted it will not prevent intensification in the city but will change the focus to building taller buildings in parts of the city where they are acceptable to residents and providing the Council with more discretion about the type of intensification that is appropriate for Christchurch.</p>	Oppose
Waipuna Halswell-Hornby-Riccarton Community Board/902.4	Kāinga Ora/ #FS2082.1266	Seek Amendment	<p>[Suggested new Qualifying Matter]: [That Council consider whether] the effects of the major earthquake sequence suffered by Christchurch in 2010-11 should be regarded a qualifying matter for the whole city.</p> <p>In the event that earthquake susceptibility of the whole city is not accepted as a qualifying matter, the Board considers that at least the most susceptible TC3 land should be a qualifying matter</p> <p>Residents of Christchurch are understandably concerned about increased height of buildings proposed by the intensification not only because of the actual earthquake risks of taller buildings, but also the psychological effects (as referred in 1.19 no social impact assessment has been undertaken to date) of these buildings on residents who have been traumatised by the earthquake experience. The Board is aware that has been no geotechnical assessment or report undertaken as part of the Plan, but believes strongly that the city's proven ongoing earthquake susceptibility should be accepted as a qualifying matter and that the whole of Christchurch should not be subject to the proposed intensification requirements. See the video at https://af8.org.nz/af8-scenario re Alpine Fault risk.</p> <p>The Board stresses that if this is accepted it will not prevent intensification in the city but will change the focus to building taller buildings in parts of the city where they are acceptable to residents and providing the Council with more discretion about the type of intensification that is appropriate for Christchurch.</p>	Oppose

Greg Partridge/ #794.3		Seek Amendment	<p>The submitter requests that the area of South Richmond be made exempt from housing intensification via a qualifying matter due to natural hazard risks, in particular risk from future earthquakes and flooding.</p> <p>Its proximity to the Red Zone and the propensity for the land in this area to suffer significant structural damage when the Southern Fault Line ruptures (or the Christchurch Fault or Greendale Fault ruptures again) means it would be foolhardy of the Council to allow increased intensification to proceed in this part of the city.</p>	
Greg Partridge/794.3	Anne Dingwall/ #FS2037.726	Seek Amendment	<p>The submitter requests that the area of South Richmond be made exempt from housing intensification via a qualifying matter due to natural hazard risks, in particular risk from future earthquakes and flooding.</p> <p>Its proximity to the Red Zone and the propensity for the land in this area to suffer significant structural damage when the Southern Fault Line ruptures (or the Christchurch Fault or Greendale Fault ruptures again) means it would be foolhardy of the Council to allow increased intensification to proceed in this part of the city.</p> <p>The submitter is concerned that natural hazard risks have not been adequately considered in implementing central government's requirements for housing intensification and development of qualifying matters. The submitter has provided extensive commentary on hazards in their submission. The submitter's analysis of earthquake and flood hazard risks to South Richmond and Christchurch in general can be summarised as follows:</p> <p>Earthquake Risk</p> <ul style="list-style-type: none"> - The Christchurch Fault is an active seismic fault that runs under the city from close to Riccarton through to the eastern suburbs and off the coast of New Brighton. It is believed to have been responsible for the series of earthquakes that rocked the city on Boxing Day 2010 and may have caused the damaging earthquake of 1869. - The Christchurch Fault runs parallel to the more destructive Port Hills Fault which lies 5km to the south. - Christchurch sits within relatively close proximity to the Alpine Fault, one of the most active fault lines in the world, and one that has a history of sudden movement. The fault has ruptured four times in the past 900 years, each time producing an earthquake of about magnitude 8. - Seismic activity caused a lot of land in Christchurch to subside during the destructive Canterbury earthquakes of 2011 and 2012. - Computer modelling indicates that when the Alpine fault ruptures it will cause significant levels of peak ground velocity – the trampolining effect – meaning major structural damage to houses, commercial buildings and land here in Christchurch is almost certain, and will be widespread. It will produce one of the biggest earthquakes since European settlement of New Zealand, and it will have a major impact on the lives of many people. - Christchurch will be impacted by widespread liquefaction, the land will further subside, roading and bridges will be left damaged or impassable and the underground infrastructure will not be left intact. <p>Flood Hazard Risk</p> <ul style="list-style-type: none"> - Currently as little as 30mm of rainfall is all that is necessary before surface flooding builds up in Christchurch. - Niwa meteorologists have indicated that climate change is making rain more intense and more frequent in Christchurch because of a warming atmosphere holds more moisture. - What climate change has done is beef up the weather making bad flooding more likely, and more frequent due to the effects of <ul style="list-style-type: none"> • Fluvial, or river floods – which occur when rivers burst their banks and flood the nearby lands. 	Support

			<ul style="list-style-type: none"> • Pluvial, or surface flooding - when the rain is just so heavy that it overwhelms local drainage • Coastal flooding, or storm surges – an occurrence when strong winds fling water onshore <p>- Current projections show that in less than 80 years about 35% of Christchurch will be inundated and vulnerable to regular flooding. Low-lying areas of the city – areas that used to be wetlands prior to European settlement – are most at risk, and they are not just coastal areas. Suburbs in central Christchurch that are earmarked for accelerated intensification, such as Edgware and St Albans are prone to flooding.</p> <p>- It would be reckless and irresponsible for Council allowing development to occur in flood prone areas and those that will flood in the future. Increasing the height of foundations and floor levels will not protect residents from having to be rescued from flood-stricken properties nor the massive costs of repairing flood damaged properties.</p> <p>- Controversial plans to increase housing density across Auckland have been delayed by a year, so that Auckland Council can assess the impact of the recent floods and decide where homes should be built. The government has given the council the extra time, but also wants Auckland to consider how more intensification might be possible in “resilient” parts of the city.</p> <p>- With Christchurch being flood prone and highly susceptible to significant seismic activity, surely the Christchurch City Council should be pointing that out to Central Government and asking them to quantify how resilient any part of the city actually is.</p>

Mary O'Connor/ #778.1		Seek Amendment	Consider making the earthquake damage risk to dwellings a Qualifying Matter. I'm not convinced that NZ can build multi-storey dwellings to withstand a rupture of the Alpine Fault and aftershocks that is likely to occur within the next 50 years (it's already overdue).	
Mary O'Connor/778.1	Robert Broughton/ #FS2083.1	Seek Amendment	<p>Consider making the earthquake damage risk to dwellings a Qualifying Matter. I'm not convinced that NZ can build multi-storey dwellings to withstand a rupture of the Alpine Fault and aftershocks that is likely to occur within the next 50 years (it's already overdue).</p> <p>We seem to have a short memory. After the Christchurch earthquakes of 2010/2011 there was to be no new development over 5 storeys in height. That no longer is the case in the central city, but in future dwellings will be on even higher-level buildings. Of just as much concern is that dwellings will be multi-storey across the city. The 2010/2011 devastating earthquakes, mainly affected the commercial centre of the city. There were many deaths and injuries, the majority in the central city from the collapse of commercial buildings. There were some residential dwellings affected that could not be immediately occupied - central city and hill zone, but most dwellings were able to be occupied in the immediate aftermath of each earthquake, even if many did not have electricity or plumbing. But multi-storey residential, and this will be from double-storey upward will likely be more likely to have fatalities and then to require engineer assessment before they can be classed safe to occupy without further aftershock damage. The Alpine Fault is overdue - not if, but when. It will likely trigger other faults and will affect much of New Zealand. The worst-case scenario will be that it will occur in winter, on a wet or snowing, cold, sou'wester day. Then the options will be risking hypothermia if you stay outside away from buildings or being crushed in an aftershock if you risk taking shelter inside your dwelling in a multi-storey building.</p> <p>I'm not convinced that NZ can build multi-storey dwellings to withstand a rupture of the Alpine Fault and aftershocks that is likely to occur within the next 50 years (it's already overdue).</p> <p>After the Christchurch earthquakes the building code was strengthened but the Stats NZ office building in Wellington, built to this new code failed in the Kaikoura earthquake. It had to be demolished and if the earthquake had occurred during the daytime when staff were in the building there would likely have been fatalities.</p> <p>Christchurch and Kaikoura earthquakes also had significant ground shaking.</p> <p>Hence, why can the earthquake damage risk to dwellings not also be a Qualifying Matter? No matter what time of day there will be people in their homes. Even with the removal of housing from the Red Zone there remains areas of the city that are prone to liquefaction in an earthquake. How confident are engineers that residential homes in multi-storey buildings in the Christchurch residential areas will not result in fatalities when the Alpine Fault earthquake and other triggered faults, occurs?</p>	Support

Toka Tū Ake EQC/ #377.10		Seek Amendment	Regarding 5.2.2.2.1, remove “b. In the High Flood Hazard Management Area: provide for development of a residential unit on residentially zoned land where the flooding risk is predominantly influenced by sea-level rise and where appropriate mitigation can be provided that protects people’s safety, well-being and property from unacceptable risk”	
Toka Tū Ake EQC/377.10	Kāinga Ora/ #FS2082.291	Seek Amendment	Regarding 5.2.2.2.1, remove “b. In the High Flood Hazard Management Area: provide for development of a residential unit on residentially zoned land where the flooding risk is predominantly influenced by sea-level rise and where appropriate mitigation can be provided that protects people’s safety, well-being and property from unacceptable risk” We support the restriction of development, particularly for the purposes of intensification, in areas at high risk from flood hazards. However, we do not think it is appropriate to allow for lower restriction on development of residential units in areas where the risk of flooding is primarily influenced by sea-level rise. Some amount of sea level rise is expected in the near future with the effects of climate change. Residential properties should therefore not be developed in those areas where sea-level rise will impact them.	Oppose

BP Oil New Zealand Ltd, Z Energy Limited and Mobil Oil New Zealand Ltd (referred to as The Fuel Companies) / #212.2		Seek Amendment	Support but seek clarity that the phrase ‘intensification of any site’ in Clause (a) only relates to higher density residential activities(i.e. not new developments associated with non-residential activities) and that Clause (b) applies to all buildingsrather than just those associated with residential activities or residential intensification.	
BP Oil New Zealand Ltd, Z Energy Limited and Mobil Oil New Zealand Ltd (referred to as The Fuel Companies) /212.2	Mark St. Clair/ #FS2014.1	Seek Amendment	Support but seek clarity that the phrase ‘intensification of any site’ in Clause (a) only relates to higher density residential activities(i.e. not new developments associated with non-residential activities) and that Clause (b) applies to all buildingsrather than just those associated with residential activities or residential intensification. The intent of this policy is supported but clarity is sought on the phrase ‘intensificationof any site’ in Clause (a). The Fuel Companies assume this policy relates todevelopment, subdivision and land use that provides for higher density residentialactivities (as reflected by the intent of PC14) rather than, for example, development(e.g. new buildings) that support existing non-residential activities. The Fuel Companies assume that Clauses (a) and (b) are both standalone policies withClause (a) providing direction on managing risk associated with higher residentialdensities or ‘intensification’ with Clause (b) providing direction on buildings associatedwith all activities (i.e. not just residential activities). This interpretation would appearconsistent with the corresponding rule framework (5.4A) which applies to all newbuildings, earthworks and stormwater instead of just those relating to residentialactivities or residential intensification. Clarity is sought in this regard.	Support
Toka Tū Ake EQC/ #377.3		Seek Amendment	Retain the policy, but formulate andadd a definition of acceptable level ofrisk in regard to coastal hazards.	
Environment Canterbury / Canterbury Regional Council/ #689.7		Support	[Retain Policy as notified]	
Environment Canterbury / Canterbury Regional Council/689.7	Anne Dingwall/ #FS2037.1029	Support	[Retain Policy as notified] [Itis] consistent with the CRPS and give[s] effect to nationaldirection.	Support
Beca/ #806.4		Seek Amendment	[Regarding Policy 5.2.2.5.1] [Add] c. Educational facilities are enabled, where there is an operational need and effects are mitigated to an acceptable level based on a site specific assessment, and havingregard to the level and timing of the hazard. This could be by use of an appropriate risk basedtrigger or alternative methods.	
Carter Group Limited/ #814.44		Oppose	Oppose Policy 5.2.2.5.1. Seek that it is deleted.	
Carter Group Limited/814.44	Kāinga Ora/ #FS2082.874	Oppose	Oppose Policy 5.2.2.5.1. Seek that it is deleted. The requirement in the policy to ‘avoid’intensification is inconsistent with objectives5.2.2.1.1 and 5.2.2.1.2 to avoidunacceptable risk and otherwise manageactivities to address natural hazard risks. Itis also inconsistent with policy 5.2.2.2.1(e)and (f) which seeks to manage such risks through the management of filling andbuilding floor levels.Whilst site specific assessments provide a pathway for such development to occur,such a process is costly and uncertain, andequates risk with flood depth (rather thanfor example, floor level, building resilience,flood water velocity or duration, etc).Accounting for the above, the CoastalHazard Management Areas should besubject to an equivalent regime to floodmanagement areas, which provides fordevelopment (including intensification) as a permitted activity, subject to compliancewith specified minimum floor levels.	Seek Amendment

Kāinga Ora – Homes and Communities / #834.23		Seek Amendment	<p>5.2.2.5.1 Managing development in Qualifying matter coastal hazard Management Areas 5.4A1-5.4A6 Rules - Qualifying Matter Coastal Hazard Management Areas and Qualifying Matter Tsunami Management Area.</p> <ol style="list-style-type: none"> 1. Amend the provisions to remove /delete the mapped Hazard Management Areas from within the District Plan and instead hold this information in non-statutory GIS maps. 2. Reduce the Tsunami Management Area to a 1:100 year hazard. 3. Amend and make consequential changes to give effect to this submission. 	
Kāinga Ora – Homes and Communities /834.23	Catholic Diocese of Christchurch/ #FS2044.21	Seek Amendment	<p>5.2.2.5.1 Managing development in Qualifying matter coastal hazard Management Areas 5.4A1-5.4A6 Rules - Qualifying Matter Coastal Hazard Management Areas and Qualifying Matter Tsunami Management Area.</p> <ol style="list-style-type: none"> 1. Richard Abey-Nesbit/ #3.2		Seek Amendment	Accelerate planning for managed retreat as a result of climate change, including the introduction of financial contributions. Add advice note about requirements for landowners to seek further protections from insurance companies.	

Richard Abey-Nesbit/3.2	Anne Dingwall/ #FS2037.37	Seek Amendment	<p>Accelerate planning for managed retreat as a result of climate change, including the introduction of financial contributions. Add advice note about requirements for landowners to seek further protections from insurance companies.</p> <p>The council needs to accelerate planning for the managed retreat that will be necessitated by climate change. The council should make a commitment now that they will seek to not compensate land owners whose land is negatively impacted from readily foreseeable damage caused by climate change going forward. It should be made clear that anyone who seeks such protection should seek it from insurance companies.</p> <p>Climate change is a known quantity and leaving the possibility open of compensation for land owners whose holding will be damaged by climate change creates significant moral hazard, and creates danger to both property and the safety of residents of the city.</p>	Support
Cheryl Horrell/ #11.5		Seek Amendment	<i>Strengthen protections for existing homes against flood risk</i>	
Cheryl Horrell/11.5	Anne Dingwall/ #FS2037.43	Seek Amendment	<p><i>Strengthen protections for existing homes against flood risk</i></p> <p>This proposal will purportedly “Protect houses from flooding during and after development by having controls on new floor levels. [And] continue to improve flood models and [your] knowledge of flood risks.” I do not see however how the proposal will prevent flooding from encroaching onto streets and footpaths and overflowing existing drainage systems which have repeatedly proven to be inadequate over the past 10 years.</p> <p>Indeed Council has concealed the increased flooding vulnerability behind higher foundation requirements for new or rebuilt homes leaving existing homes increasingly vulnerable to flooding on foundations lower than Council considers safe from flooding.</p> <p>Your proposals to manage flooding by raising housing floor levels do not stand up to scrutiny; five new houses will undoubtedly contribute more stormwater pressure on existing systems than the original one home surrounded by permeable land.</p> <p>We know enough now to stop building in places and in a manner that will leave residents living in flood prone homes as the impacts of global warming increase. This year’s flooding from Cyclone Gabrielle should be a warning to councils and central government not to ignore the needs of residents who find themselves stranded in flood prone areas.</p> <p>Residents on flood vulnerable land must be able to rely on Council to protect them. It is arguable that owners of houses sitting below safe floor levels should retreat, surely we have learnt that much post Cyclone Gabrielle. Combine our lower flooring levels with our homes being in a tsunami management area and the fact that ground water in Woolston is just below the surface, I am stunned that Council has not seen the need to, if not retreat from this area, at least restrict more housing. It is possible we may not need to retreat if any further infill development was restricted in this high risk area. Ignoring this issue and proposing increased housing density with higher foundations is irresponsible in the circumstances.</p> <p>I submit that Council is ignoring the plight of existing home owners who had liquefaction flood onto their properties from surrounding land following the 2010 and 2011 earthquakes.</p>	Support
Te Mana Ora/Community and Public Health/ #145.4		Support	Te Mana Ora supports the proposed Qualifying Matters related to high-risk natural hazards, including coastal inundation, coastal erosion and tsunami hazard.	
Te Mana Ora/Community and Public Health/145.4	Toka Tū Ake EQC ./ #FS2075.27	Support	Te Mana Ora supports the proposed Qualifying Matters related to high-risk natural hazards, including coastal inundation, coastal erosion and tsunami hazard.	Support

			<p>Te Mana Ora supports increasing the density of housing and creating more compact urban environments, to meet the needs of the growing population in Ōtautahi Christchurch. As highlighted within the Housing and Business Choice and Heritage Consultation Document, 40,000 more houses will be needed to meet demand in the next 30 years. The growing need for housing, alongside the risks and impacts of climate change need to be carefully considered.</p> <p>The National Adaptation Plan 2022 noted that there is increasing risk to housing from extreme weather events, drought, increased fire weather and sea-level rise (Ministry for the Environment. 2022. Aotearoa New Zealand’s first national adaptation plan. Wellington. Ministry for the Environment). Climate change is already severely impacting communities in Aotearoa New Zealand as highlighted by recent events, including the damage caused by flooding in Auckland and by Cyclone Gabrielle in Hawke’s Bay and Gisborne.</p> <p>Damaged housing and displacement caused by extreme weather events and climate change will impact the existing housing supply, resulting in increased demand and impacting affordability. In Aotearoa New Zealand, about 675,000 people live in flood prone areas and 72,000 people live in areas at risk of storm surges (Ministry for the Environment. 2022. Aotearoa New Zealand’s first national adaptation plan. Wellington. Ministry for the Environment). These numbers will only increase as extreme weather events increase and sea-levels rise, putting additional pressure on housing.</p> <p>Building housing in areas that are at risk of flooding and sea level rise will only compound issues of housing availability and affordability. Therefore, limiting density in high-risk areas and increasing housing density in areas of Ōtautahi Christchurch that are less exposed to climate risks will increase our resilience to climate change and support our housing needs as we experience more extreme weather and greater impacts from climate change around Aotearoa New Zealand.</p>	
Jenny Crooks/ #159.3		Oppose	That 25a Greenhaven Drive, Burwood, be rezoned from Rural Urban Fringe Zone to residential (Medium Density Residential Zoning preferred) and not be subject to flooding overlays.	
Toka Tū Ake EQC/ #377.12		Seek Amendment	Consider restricting density of development in the High and Medium Density residential areas which intersect with the Flood Management overlay.	
Toka Tū Ake EQC/377.12	Kāinga Ora/ #FS2082.292	Seek Amendment	Consider restricting density of development in the High and Medium Density residential areas which intersect with the Flood Management overlay. Flood hazard risk is predicted to increase in the near future due to rising sea-levels, associated rising ground-water levels, and more frequent and intense rain events. Flooding does not pose high risk to life or to the structural integrity of buildings, but frequent, repeated flood events can have a severe effect on the wellbeing of residents and incur a high financial cost to businesses and residents due to loss of business, loss of access to buildings, damage to property and furnishings, and clean-up costs (including removing contaminated silt from under houses which can become a health hazard). We support the extent of the modelled Flood Management Areas and note that the threshold for this mapped extent is a greater intensity and lower likelihood flood than the lowest flood level modelled by other territorial authorities. We do not suggest that intensification should not be allowed in this area, but there should be some restriction on density in Medium and High Density Residential Areas which intersect with this overlay, in addition to the required floor level provision.	Oppose

Any consequential amendments to zones, overlays, precincts, and qualifying matters to reflect the relief sought in the submission. <p>Kāinga Ora seek that spatial identification of coastal hazard management areas be made available through a set of non-statutory maps, which would operate as interactive maps on the Council's GIS website – thereby operating as a separate mapping viewer to the statutory District Plan maps. This approach is different to that of the traditional means of displaying hazard overlays on district plan maps and reflects that these maps do not have regulatory effect. The advantage of this approach is the ability to operate a separate set of interactive maps which are continually subject to improvement and updates, outside of and without reliance on the Schedule 1 Resource Management Act 1991 process. Kāinga Ora notes that this is an approach taken by other Councils around the country. Rule 5.4A.5 NC3 makes development, subdivision and land use that would provide for residential intensification of any site within the Qualifying Matter Tsunami Management Area except that permitted or controlled in Rule 14.4.1 a non-complying activity. Rule 14.4.2 deals with controlled activities so the rule outlined above needs to be amended to reference Rule 14.4.2. There are no applicable rules in the subdivision chapter for the Tsunami Management Area. Rule 14.4.1 provides for up to four residential units to be constructed as a permitted activity. If this level of intensification is provided for, then having a non-complying activity status and an avoid policy seems nonsensical.</p>	Oppose
Lyttelton Port Company Limited/ #853.20		Oppose	<p>5.4A Rules – Qualifying Matter Coastal Hazard Management Areas and Qualifying Matter Tsunami Management Area</p> <p>5.4A.1 Permitted activities. There are no permitted activities.</p> <p>Remove Tsunami Management Area Qualifying matter from LPC's City Depot site in Hillsborough.</p>	
Lyttelton Port Company Limited/853.20	Mark St. Clair/ #FS2014.5	Oppose	<p>5.4A Rules – Qualifying Matter Coastal Hazard Management Areas and Qualifying Matter Tsunami Management Area</p> <p>5.4A.1 Permitted activities. There are no permitted activities.</p> <p>Remove Tsunami Management Area Qualifying matter from LPC's City Depot site in Hillsborough.</p> <p>LPC is neutral on the proposed rule framework within the Qualifying Matter Tsunami Management Area provided the City Depot site is excluded from the Qualifying Matter Area.</p> <p>It is critical that LPC's infrastructure, which is regionally and nationally significant, is not subject to restrictive rules such as 5.4A.1 which provides that there are no permitted activities. This is highly likely to impact LPC's ability to operate, maintain and upgrade infrastructure at City Depot.</p>	Support

Robert Black/ #246.6		Seek Amendment	Amend the recession planes to 40 degrees or less. Exclude Rule 5.4.1.3 from applying to recession planes under the MDRS.	
Robert Black/246.6	Kāinga Ora/ #FS2082.211	Seek Amendment	<p>Amend the recession planes to 40 degrees or less. Exclude Rule 5.4.1.3 from applying to recession planes under the MDRS.</p> <ul style="list-style-type: none"> I know that the CCC has introduced a city wide “access to sunlight” recession plane, which I am in full support of. However, I consider that it needs to go further than the current proposal. This is for two reasons: <ol style="list-style-type: none"> Recession plane on southern side (i.e. neighbours northern boundary) needs to allow more sunlight; and The issue of where floor level commences for the purpose of calculating recession planes needs to be considered. Firstly, the southern recession plane in the sections in this area this area previously was around 30 degrees. I appreciate that the Council has reduced the MDRS recession plane (60 degrees) to 50 degrees in light of Christchurch’s more limited access to sunlight, but I consider this should be 40 degrees or less to better protect homes access to sun. This is particularly relevant at a time where emphasis is put on “healthy homes” – access to sunlight (and the warmth and dryness it brings) should be protected. We have a large new home along our North built to 29 degrees (about 36 degrees for a large stairwell) Loss of sun in midwinter is particularly noticeable but acceptable because it is only for a few weeks. Any more loss resulting from a 50 degree standard would most seriously affect our heating requirement and sunlight. If a new 50 degree build appeared in front of us (and fortunately that is very unlikely) we would have to move: Too cold , too damp. 50 degrees is simply not fair or equitable in Christchurch. As outlined above in this submission, due to the flooding risk in this area, new builds are issued a minimum floor level that is significantly higher than the existing housing stock. Rule 5.4.1.3 of the District Plan includes an exemption for daylight recession planes in the Flood Management Area (FMA). My understanding of how that rule operates is that where the floor level of a new building is required to be high (due to being in the FMA and so at risk of flooding) the “floor level” for the purposes of the calculation of recession planes is taken to be the minimum floor level, not actual ground level. This rule is clearly advantageous to the new build (as it allows for more build height), but to the significant detriment of the neighbours, particularly, where those neighbours have an existing house at (or about) ground level. The rule was introduced by way of submission on the District Plan (rather than proposed by Council at the initial stage) which resulted in it slipping in fairly unopposed, with the effected public having no realistic chance of being aware of the change, or objecting. I have major concerns as to how this will play out with the new MDRS rules. There is no reference that I can see excluding the new height limits and recession rules from Rule 5.4.1.3. So, even though PC14 proposes reduced recession plane limits in Christchurch, how those reductions apply will be less in practice in FMA than in other areas of the city. 	Oppose
Kāinga Ora – Homes and Communities / #834.113		Seek Amendment	<p>Exemptions for daylightrecession planes in the FloodManagement Area</p> <p>Amend rules as follows:</p> <p>5.4.1.3 a. For P1 and P2 in Rule 5.4.1.1,the applicable daylight recession plane inresidential zones (other than in theMedium Density Residential Zone andHigh Density Residential Zone) shall bedetermined as if the ground level at therelevant boundary was the minimum floorlevel set in the activity specific standardsin Rule 5.4.1.1, or natural ground level,whichever is higher.</p> <p>5.4.1.3b. For P3 and P4 in Rule 5.4.1.1,the applicable daylight recession plane inresidential zones (other than in theMedium Density Residential Zone andHigh Density Residential Zone) shall bedetermined as if the ground level at therelevant boundary was the minimum floorlevel specified in the Minimum FloorLevel Certificate issued under Rule5.4.1.2, or natural ground level,whichever is higher.</p> <p>5.4.1.3 c</p> <p>viii. Rule 14.5.2.6 Height in relation toboundary – Medium DensityResidential Zone ix. Rule 14.6.2.2 Height in relation toboundary – High Density ResidentialZone</p>

Reduce the Tsunami ManagementArea to a 1:100 year hazard. 3. Amend and make consequentialchanges to give effect to thissubmission. <p>Kāinga Ora supports a riskbased approach to the management of natural hazards, however, opposes the inclusion of further hazard areas within the maps as part of the District Plan. Including Flood Hazard Areas in the District Plan ignores the dynamic nature of such hazards. Kāinga Ora accepts that it is appropriate to include rules in relation to these hazards but seeks that the rules are not linked to static maps. Other councils across the country adopt a set of nonstatutory hazard overlay maps which operate as interactive maps on the respective Council’s ‘Geo Maps’ website – a separate mapping viewer to the statutory maps. The advantage of this approach is the ability to operate a separate set of interactive maps which are continually subject to improvement and updates, outside of and without a reliance on the Schedule 1 process under the RMA. Kāinga Ora notes that there is no formal requirement for hazard maps to be included within a district plan. Kāinga Ora also has concerns that the proposed policy approach relating to the Tsunami Management Area is too conservative, noting that Policy 24 of the NZCPS requires identification of areas in the coastal environment that are potentially affected by coastal hazards (including tsunami) over at least 100 years. Kāinga Ora also considers that the Council’s intent to retain Residential Suburban / Residential Suburban Density Transition zoning in the Tsunami Management Area is disproportionate based on the modelled return period.</p>	Seek Amendment

South Shore Resident's Association (SSRA) / 380.8	Toka Tū Ake EQC ./ #FS2075.13	Seek Amendment	Ensure that [the Qualifying Matter Tsunami Management Area] does not stop reasonable development. SSRA want to ensure that while the proposed PC14 QM may serve to control intensification in coastal areas, it does not stop reasonable development or serve to stagnate a community. For example – the current public document signals proposed development within tsunami hazard areas is to be restricted to a suburban density of one two-storey dwelling per site. We question whether this will onerously restrict single house sites. This may reduce the development of single unit and single level dwellings. These are essential for older residents or single occupancy. SSRA are concerned that this control would be overly restrictive from a varied housing occupancy supply perspective. Varied housing options are socially responsible and enable community wellbeing.	Oppose

more focussed site-by-site assessments that reflect site specific considerations and mitigation; and a clear policy pathway for on-site mitigation.

LMM considers that the TMA as notified is legally wrong, and falls outside of the scope of what is allowed under the RMA to be included in an intensification planning instrument like PC14:

1. Section 77I of the RMA only grants Council's the power to impose qualifying matters over 'relevant residential zones'. The TMA has been notified as applying over a whole range of commercial, industrial, open space, and rural zones.
2. A recent Environment Court¹ case has considered the issue of qualifying matters and found that these must only relate to making the intensified density standards themselves less enabling. It is not a mechanism that enables further constraint to the status quo. Such an amendment to the District Plan would be ultra vires. This is directly relevant to the TMA being proposed as a qualifying matter, which effectively proposes to make a range of status quo provisions less enabling of development (and not just the MDRZ).

It is also LMM's position that the extent of the overlay is excessive and not appropriately commensurate with risk. The TMA appears to be based off a 2019 report by NIWA (the NIWA Report) 1 in 500 year tsunami event with 1.06m² sea level rise by 2120. This modelled scenario is too conservative in light of the serious development restrictions the overlay places on private property.

LMM are not aware of any other tier 1 local authority using a 1:500 year tsunami risk as a qualifying matter. The modelled scenario is inconsistent with the standard coastal risk approaches throughout the country:

Canterbury Regional Policy Statement

In the Canterbury Regional Policy Statement (CRPS) 'high hazard areas' (albeit they do not relate to tsunamis but rather coastal inundation and erosion) at (1) also refers to a 1:500 year event for flooding (being the equivalent of 0.2% AEP) where depths are greater than one metre.

From our review of the NIWA Report, it appears the TMA notified includes all areas where inundation might occur from the tsunami scenario, where that is greater than 0m. In other words, land has been included in the TMA where depth will be far less than one metre in a 1:500 year event. It is difficult to see how the TMA is being justified in these areas.

Given the purpose of the TMA is to mitigate risk to life of people in the event of a tsunami, consideration should have been given to at which point that risk materialises. It is not appropriate to simply take the area from the NIWA report and convert this into an overlay without analysing the appropriateness of its extent any further.

Greater Christchurch Partnership

The proposed TMA is larger than the Tsunami Inundation area identified by the Greater Christchurch Partnership as part of its consultation on the Greater Christchurch Spatial Plan (the draft Spatial Plan). The draft Spatial Plan maps include a map showing the Canterbury Coastal Natural Hazards. It is not clear why the TMA has not been mapped in a manner consistent with this map.

The tsunami evacuation area

The TMA is also similar to the Canterbury Tsunami Evacuation Zones. The commentary to these zones is as follows:

"Tsunami evacuation zones are areas that we recommend people evacuate from as a precaution after they feel a long or strong earthquake, or in an official tsunami advisory or warning. They encompass many different possible tsunami scenarios.

The area that would be flooded in any particular tsunami depends on many factors, including:

- *the size of the earthquake*
- *precisely how the earthquake fault moved*

			<ul style="list-style-type: none"> • the direction the tsunami is coming from • the tide level when the largest waves arrive. <p>Every tsunami will be different and we can never say for sure exactly which areas within a zone will be flooded. There is no one tsunami that would flood an entire zone.</p> <p>We consider many different tsunami scenario models when drawing the tsunami evacuation zones. The inland boundary of the zones is based on several 'worst-case' scenarios – very rare tsunamis that we might expect once every 2500 years.”</p> <p>[emphasis added]</p> <p>Environment Canterbury themselves recognise that:</p> <p>“... the tsunami evacuation zones are not appropriate for property-specific land use planning. Land use planning considers the sustainability of development in an area as well as life safety and wellbeing issues, whereas tsunami evacuation zones are fundamentally about life safety. For this reason, as explained above, the zones are generally conservative, and the yellow zone in particular represents an extreme event that we would only expect in the order of every 2500 years, which is beyond most land use planning time frames.”</p> <p>[emphasis added]</p> <p>The NIWA Report</p> <p>The NIWA Report on which the TMA is based also recognises that the maps are highly conservative and caveats many of its own findings:</p> <p>“Maps of the inundation extents should not be used at scales finer than 1:25,000. The overview maps are intended as a guide only and should not be used for interpreting inundation.”</p> <p>It is further noted the report was prepared with the intention of informing the Land drainage recovery program, and not specifically for the purposes of being applied as a qualifying matter to restrict development.</p> <p>The costs of imposing such strict restrictions on development over such a conservative area significantly outweighs the benefits of reducing the risk of harm to people. Risk and development constraints need to be proportionate and appropriate.</p>	
LMM Investments 2012 Limited / #826.3		Seek Amendment	<p>In the alternative, if the TMA is retained there needs to be:</p> <ol style="list-style-type: none"> 1. more focussed site-by-site assessments that reflect site specific considerations and mitigation; and 2. a clear policy pathway for on-site mitigation. 	

Natural Hazards > Rules - Flood hazard > 5.4A Rules - Qualifying Matter Coastal Hazard Management Areas and Qualifying Matter Tsunami Management Area > 5.4A.1 Permitted activities

James Carr/ #519.5		Seek Amendment	It might be worthwhile requiring new houses in areas at risk from sea level rise or increasing flood risk to be designed to be easily relocated (not necessarily in one piece). Again this is likely to require a wood foundation, but given that these areas typically have soft soils this would not be a bad thing.	
James Carr/519.5	Anne Dingwall/ #FS2037.518	Seek Amendment	<p>It might be worthwhile requiring new houses in areas at risk from sea level rise or increasing flood risk to be designed to be easily relocated (not necessarily in one piece). Again this is likely to require a wood foundation, but given that these areas typically have soft soils this would not be a bad thing. A response to natural hazards and climate change is necessary, but this should not be an excuse to continue the status quo. If houses in flood prone areas were to be elevated somewhat (to minimise damage from smaller flooding events), the use of wood instead of concrete for foundations would again also significantly reduce carbon emissions. Two stories could help protect from tsunami damage, though I note that a typical New Zealand house would probably not survive the impact of a significant rush of water. Videos from tsunamis elsewhere show light timber buildings crumpling or being swept away, and as an engineer I have no reason to think buildings here would behave any differently. There is also the issue of accessibility, and the idea of creating entire suburbs that are not wheelchair accessible is problematic.</p>	Support
Transpower New Zealand Limited / #878.5		Seek Amendment	<p>Amend 5.4A Rules as follows: "5.4A.1 Permitted activities a. There are no permitted activities. The activities listed below are permitted activities.</p> <p>[Add to Permitted Activities table: "Utilities". with "Nil" specific standards.]</p>

Submission Number	Further Submission No	Position	Decision Requested	FS Position
Environment Canterbury / Canterbury Regional Council / #689.75		Seek Amendment	[That the Slope Instability Management Area Rules] take into account Trangmar's erosion classes and exclude "severe" erosion class land from further subdivision and development.	
Environment Canterbury / Canterbury Regional Council / 689.75	Anne Dingwall / #FS2037.1097	Seek Amendment	[That the Slope Instability Management Area Rules] take into account Trangmar's erosion classes and exclude "severe" erosion class land from further subdivision and development. Excluding further subdivision on "severe" erosion class land would avoid additional sediment entering waterways from the land most likely to erode as a result of rainfall events. CRC consider that medium or high density development on the Port Hills would result in increased stormwater runoff as there is little attenuation capacity in some catchments. This could lead to more sediment loss into Cashmere Stream and the Heathcote/Ōpāwaho River and lead to gross sedimentation of waterways and the coast as well as stormwater networks and down-slope residents. Most of the Port hills are inside the High Soil Erosion Risk Zone under the Canterbury Land and Water Regional Plan. If such development occurs on these hills, there will be a need to require on-site attenuation. CRC understands that sedimentation is captured under Christchurch City Council bylaws, building consents, and in resource consent conditions, but notes that this is an opportunity to more holistically and strategically address the issue rather than relying on these other management mechanisms. Reduce the Tsunami Management Area to a 1:100 year hazard. 3. Amend and make consequential changes to give effect to this submission. <p>Kāinga Ora supports a risk based approach to the management of natural hazards, however, opposes the inclusion of further hazard areas within the maps as part of the District Plan. Including Flood Hazard Areas in the District Plan ignores the dynamic nature of such hazards. Kāinga Ora accepts that it is appropriate to include rules in relation to these hazards but seeks that the rules are not linked to static maps. Other councils across the country adopt a set of non-statutory hazard overlay maps which operate as interactive maps on the respective Council's 'Geo Maps' website – a separate mapping viewer to the statutory maps. The advantage of this approach is the ability to operate a separate set of interactive maps which are continually subject to improvement and updates, outside of and without reliance on the Schedule 1 process under the RMA. Kāinga Ora notes that there is no formal requirement for hazard maps to be included within a district plan. Kāinga Ora also has concerns that the proposed policy approach relating to the Tsunami Management Area is too conservative, noting that Policy 24 of the NZCPS requires identification of areas in the coastal environment that are potentially affected by coastal hazards (including tsunamis) over at least 100 years. Kāinga Ora also considers that the Council's intent to retain Residential Suburban / Residential Suburban Density Transition zoning in the Tsunami Management Area is disproportionate based on the modelled return period.</p> <p>6.1 A Qualifying matters</p> <ol style="list-style-type: none"> 1. Kāinga Ora – Homes and Communities / #834.25		Seek Amendment	6.1A 1. Retain Significant and Other Tree Qualifying Matter.	
Kāinga Ora – Homes and Communities / #834.30		Seek Amendment	Remove 'Environmental Asset Waterways' and 'Network Waterways' as a qualifying matter, unless a site by site assessment has been undertaken that demonstrates why development that is otherwise permitted under MDRS is inappropriate.	
Kāinga Ora – Homes and Communities / #834.30	Catholic Diocese of Christchurch / #FS2044.24	Seek Amendment	Remove 'Environmental Asset Waterways' and 'Network Waterways' as a qualifying matter, unless a site by site assessment has been undertaken that demonstrates why development that is otherwise permitted under MDRS is inappropriate. Section 6 seeks the preservation of rivers and their margins and their protection from inappropriate subdivision, use and development. Similarly, Section 6 also recognises and provides for the relationship of Māori and their culture and traditions with their ancestral lands, water, sites, wāhi tapu, and other taonga. Kāinga Ora is supportive of these Section 6 matters being identified as a qualifying matter. However, where the identified waterbodies do not meet a Section 6 threshold, such as for 'Environmental Asset Waterways' and 'Network Waterways' use of waterway setbacks as a qualifying matter, Council needs to demonstrate why development that is otherwise permitted under MDRS is inappropriate, for every specific waterway (and adjacent site) where a qualifying matter is proposed. The existing provisions in Chapter 6.6 of the District Plan are sufficient.	Support

Kāinga Ora – Homes and Communities / #834.32		Oppose	Delete the Open Space (recreation zone) qualifying matter and any relevant provisions proposed in its entirety.	
Kāinga Ora – Homes and Communities / #834.32	Catholic Diocese of Christchurch / #FS2044.26	Oppose	Delete the Open Space (recreation zone) qualifying matter and any relevant provisions proposed in its entirety. Kāinga Ora considers this qualifying matter is unnecessary and seek that it is deleted. While the use of areas for open space purposes is identified as a qualifying matter under RMA s770(f), the areas zoned Open Space are owned by CCC and many are administered under the Reserves Act 1977. Council ownership, and Open Space zoning, makes it unlikely that these areas will be developed for medium density housing and such development would also be contrary to the purposes for which these sites were reserved. Further, the Housing Supply Act only requires CCC to incorporate MDRS into every relevant residential zone (not Open Space Zone). The s770(f) matter is noted as being relevant for other councils where their District Plan does not include an Open Space zone and instead reserves often have a residential zoning. As with the Open Space Zones, Kāinga Ora note that the Ōtākaro 'red zone' area has been subject to detailed place based assessment, with large scale residential development not anticipated in this area. Delete the Open Space (recreation zone) qualifying matter and any relevant provisions proposed in its entirety. Kāinga Ora considers this qualifying matter is unnecessary and seek that it is deleted. In the event that the Character Area qualifying matter remains, explicit provision is sought for the ability to develop Papakāinga/Kāinga Nohoanga, noting that local Rūnanga have purchased the former Lyttelton West School Site</p> <p>Kāinga Ora support, in principle, the management of character as a qualifying matter. However, Kāinga Ora does not consider appropriate justification has been provided for the proposed new or extended 'character areas' set out in PC13 and PC14 to demonstrate that they contain specific characteristics that make the level of development provided by the MDRS or policy 3 inappropriate in the area. Further, they blur the line between the protection of historic heritage values as set out under s6(f) of the RMA, and amenity values as set out under section 7 of the RMA. This is especially the case where both character and heritage area overlays apply to the same geographic area. Kāinga Ora questions the planning method and assessment undertaken to determine the proposed provisions. Kāinga Ora considers that any such provisions and values identified should be 'managed' rather than 'protected' in the District Plan. Kāinga Ora seeks the provisions as proposed are deleted and that further analysis is undertaken to determine the exact values of the resources that the Council seeks to manage in the District Plan.</p>	
Kāinga Ora – Homes and Communities /834.37	Amy Beran/ #FS2030.8	Oppose	<p>6.1A Qualifying matters Residential Character areas</p> <p>1. Delete all new or extended character areas as qualifying matters and undertake further analysis to determine the exact values of the resources that the Council seeks to manage in the District Plan.</p> <p>2. For existing character areas retain the controlled activity status for new buildings that exists in the Operative Plan - Rule 14.5.3.1.2 C114.5.3.2.3 Building height – Character Area Overlays, and 14.5.3.2.5 – 14.5.3.2.14 Built form rules – Character Area Overlays.</p> <p>3. In the event that the Character Area qualifying matter remains, explicit provision is sought for the ability to develop Papakāinga/Kāinga Nohoanga, noting that local Rūnanga have purchased the former Lyttelton West School Site</p> <p>Kāinga Ora support, in principle, the management of character as a qualifying matter. However, Kāinga Ora does not consider appropriate justification has been provided for the proposed new or extended 'character areas' set out in PC13 and PC14 to demonstrate that they contain specific characteristics that make the level of development provided by the MDRS or policy 3 inappropriate in the area. Further, they blur the line between the protection of historic heritage values as set out under s6(f) of the RMA, and amenity values as set out under section 7 of the RMA. This is especially the case where both character and heritage area overlays apply to the same geographic area. Kāinga Ora questions the planning method and assessment undertaken to determine the proposed provisions. Kāinga Ora considers that any such provisions and values identified should be 'managed' rather than 'protected' in the District Plan. Kāinga Ora seeks the provisions as proposed are deleted and that further analysis is undertaken to determine the exact values of the resources that the Council seeks to manage in the District Plan.</p>	Seek Amendment

Kāinga Ora – Homes and Communities / #834.95		Oppose	Delete the Key Transport Corridors – CitySpine Qualifying Matter and all associated provisions.	
Kāinga Ora – Homes and Communities /834.95	Catholic Diocese of Christchurch/ #FS2044.64	Oppose	Delete the Key Transport Corridors – CitySpine Qualifying Matter and all associated provisions. Kāinga Ora oppose the ‘CitySpine’ being a qualifying matter and considers this to be inconsistent with the requirements of Section 77L. The associated rules require buildings and outdoor living spaces to be set back from spine road corridors in both residential and commercial zones. In commercial zones there is a direct conflict in urban design outcomes (and rules) where the Key Pedestrian Frontage rules require buildings to be built up to the road boundary in order to deliver good urban design outcomes and facilitates a continuous street edge (often with veranda cover for pedestrians). It is understood that the intention of the rule is to enable road widening in the future to accommodate public rapid transit. If Council’s intention is to acquire land in the future to facilitate public works then it should use the designation powers available to it. Given the highly developed nature of these existing corridors with lengthy sections of commercial property built to the road boundary, it is unclear how any corridor-long road widening will occur without major land acquisition and demolition.	Support

Kāinga Ora – Homes and Communities / #834.115		Oppose	Delete Section 6.10A and all associated provisions	
Kāinga Ora – Homes and Communities /834.115	Catholic Diocese of Christchurch/ #FS2044.80	Oppose	Delete Section 6.10A and all associated provisions Kāinga Ora welcomes the Council’s recognition of trees as a key element in successful urban environments. Kāinga Ora strongly support the Council increasing its prioritisation of the need to renew streetscapes, especially in areas where intensification has and will continue to occur. Such renewals should include kerb and channel replacement, undergrounding of overhead wires, and street tree planting. Kāinga Ora has substantial concerns with the 20% tree canopy cover target and considers it fundamentally unachievable in medium and high density environments on private land. Kāinga Ora considers the requirements to achieve 20% tree canopy cover is inconsistent with the spatial outcome requirements set out in the NPS-UD, and the Medium Density Residential Standard (MDRS) provisions of the Housing Supply Act. Kāinga Ora considers that the proposed financial contribution calculator is complicated and flawed, a simpler formula would be to require 1 tree to be planted per 100m ² of site area, as an easier compliance threshold than a trigger of 10% of future canopy cover. It also has concerns with the reliance on Financial Contributions. Given that Council already owns extensive areas of park and open space land (including several thousand hectares of land on the Port Hills and Red Zone), in addition to extensive road reserve and local park areas, and given that Council takes Development Contributions for new parkland as part of any new development, the need for the land component to form part of the financial contributions appears to be particularly hard to justify. The need to provide rapid canopy cover potentially creates a perverse incentive to plant faster growing exotic species rather than natives. The proposed Financial Contribution could therefore result in a decline in biodiversity by driving developers to plant exotics over natives, with attendant adverse biodiversity outcomes, which is contrary of the desire in the Urban Forest Plan to seek diversity in tree species.	Support

Kāinga Ora has substantial concerns with the 20% tree canopy cover target and considers it fundamentally unachievable in medium and high density environments on private land. Kāinga Ora considers the requirements to achieve 20% tree canopy cover is inconsistent with the spatial outcome requirements set out in the NPS-UD, and the Medium Density Residential Standard (MDRS) provisions of the Housing Supply Act. Kāinga Ora considers that the proposed financial contribution calculator is complicated and flawed, a simpler formula would be to require 1 tree to be planted per 100m ² of site area, as an easier compliance threshold than a trigger of 10% of future canopy cover. It also has concerns with the reliance on Financial Contributions. Given that Council already owns extensive areas of park and open space land (including several thousand hectares of land on the Port Hills and Red Zone), in addition to extensive road reserve and local park areas, and given that Council takes Development Contributions for new parkland as part of any new development, the need for the land component to form part of the financial contributions appears to be particularly hard to justify. The need to provide rapid canopy cover potentially creates a perverse incentive to plant faster growing exotic species rather than natives. The proposed Financial Contribution could therefore result in a decline in biodiversity by driving developers to plant exotics over natives, with attendant adverse biodiversity outcomes, which is contrary of the desire in the Urban Forest Plan to seek diversity in tree species.	Support
Kāinga Ora – Homes and Communities /834.115	Chapman Tripp/ #FS2063.132	Oppose	Delete Section 6.10A and all associated provisions Kāinga Ora welcomes the Council’s recognition of trees as a key element in successful urban environments. Kāinga Ora strongly support the Council increasing its prioritisation of the need to renew streetscapes, especially in areas where intensification has and will continue to occur. Such renewals should include kerb and channel replacement, undergrounding of overhead wires, and street tree planting. Kāinga Ora has substantial concerns with the 20% tree canopy cover target and considers it fundamentally unachievable in medium and high density environments on private land. Submission Number	Further Submission No	Position	Decision Requested	FS Position
Cheryl Horrell/ #11.1		Support	Retain qualifying matters	
Tobias Meyer/ #55.19		Seek Amendment	Amend proposed Sunlight Access Qualifying matter	
Kathleen Crisley/ #63.92		Seek Amendment	Add Qualifying Matter relating to presence of private stormwater drainage.	
Rosemary Neave/ #72.2		Oppose	Remove the Low Public Transport Accessibility Area Qualifying Matter from the proposed plan change.	
Rosemary Neave/72.2	Anne Dingwall/ #FS2037.149	Oppose	<p>Remove the Low Public Transport Accessibility Area Qualifying Matter from the proposed plan change.</p> <p>The submitter opposes the Low Public Transport Accessibility Area Qualifying Matter as they believe that the public transport layout and network will need changes to prepare and accommodate future growth. We should not define future growth in Christchurch based on these routes. This would also artificially limit future housing in our city</p> <p>The council plans to restrict housing in some areas of the city because they are poorly serviced by the lack of current high frequency public transport routes. Some areas solely designated with this qualifying matter, such as in Casebrook and Styx are close to rail corridors and existing commercial areas are serviced by low frequency routes. In the future, these areas could see a boost in service by more buses on current routes or introduction of a commuter rail service.</p>	Oppose
Te Whare Roimata / #105.3		Seek Amendment	<p>New Qualifying Matter for the provision of affordable housing:</p> <ul style="list-style-type: none"> the adoption of the American approach to urban development which requires a percentage of new developments being set aside to house low income dwellers; or 	

			<ul style="list-style-type: none"> the development of an Inclusionary Housing Plan which requires new residential developments to pay an “affordable housing financial contribution” similar to that adopted by the Queenstown Council. The money collected from this financial contribution would then be given to Community Housing providers to help fund replacement affordable housing ideally in neighbourhoods such as the Inner City East. 	
Te Whare Roimata /105.3	Anne Dingwall/ #FS2037.174	Seek Amendment	<p>New Qualifying Matter for the provision of affordable housing:</p> <ul style="list-style-type: none"> the adoption of the American approach to urban development which requires a percentage of new developments being set aside to house low income dwellers; or the development of an Inclusionary Housing Plan which requires new residential developments to pay an “affordable housing financial contribution” similar to that adopted by the Queenstown Council. The money collected from this financial contribution would then be given to Community Housing providers to help fund replacement affordable housing ideally in neighbourhoods such as the Inner City East. <p>The growing intensification of the Inner City East / Linwood West highlights the inability of a market-led planning approach to significantly improve housing affordability for entry level homeowners and the City’s least advantaged residents. Without an Inclusionary Housing Plan such as the Queenstown example, intensification exacerbates the housing poverty experienced by low income dwellers forcing them to compete against each other for whatever affordable housing there is within their existing neighbourhood or forces them out away from their friends, supports and networks. Katie Newell/ #167.2		Oppose	Removal of the 'Low Public Transport Accessibility Area' Qualifying Matter in relation to 76 Patten Street.	
Richard Moylan/ #169.3		Seek Amendment	Support the sunlight qualifying matter and enhancing it to provide for outdoor washing drying.	
Josiah Beach/ #180.1		Support	Fully and completely supports all the Qualifying Matters proposed by the Council.	
Josiah Beach/180.1	Anne Dingwall/ #FS2037.229	Support	Fully and completely supports all the Qualifying Matters proposed by the Council. Submitter fully and completely supports all the Qualifying Matters proposed by the Council, and is grateful for the proactive and well-considered issues that they deal with.	Support
Tom Logan/ #187.9		Oppose	Remove [the Low Public Transport Accessibility Areas] QM entirely or amend to reduce scope.	

Tom Logan/187.9	Kāinga Ora/ #FS2082.92	Oppose	Remove [the Low Public Transport Accessibility Areas] QM entirely or amend to reduce scope. The Low Public Transport Accessibility Qualifying Matter should be removed from the proposal because the criteria used to identify its spatial extent is arbitrary and prevents strategic growth in areas served by decent and improving PT routes. Should an entire area really be precluded from all future development solely on the basis that it is not currently served by a core public transport route? A lack of public transport access is a manufactured reason to not allow density, as it unnecessarily limits density due to inadequate planning on the part of the regional council. It also ignores different measures of accessibility to amenities, beyond public transport use. Better measures of city-wide accessibility should have been used, rather than the simple model used by the council in their analysis. Given the promotion of active public transport by the council, why was this mode not considered in their analysis of accessibility for the QM?	Support
Addington Neighbourhood Association / #205.4		Support	That natural hazards must be allowed for, or the Council could face legal redress for allowing higher density in the wrong places.	
Addington Neighbourhood Association /205.4	Anne Dingwall/ #FS2037.296	Support	That natural hazards must be allowed for, or the Council could face legal redress for allowing higher density in the wrong places. Atlas Quarter Residents Group (22 owners) / #224.26		Support	The inclusion of the qualifying criteria is supported, independent of height limits.	
Property Council New Zealand/ #242.16		Seek Amendment	Property Council strongly supports density near key transport nodes, especially those that connect larger commercial centres. However, we are concerned that Christchurch City Council is establishing public transport as a qualifying matter in order to reject future MDRS or proposed high-density areas. It is important that there be a co-ordinated approach between the delivery of future transport and housing projects.	

Property Council New Zealand/242.16	Kāinga Ora/ #FS2082.197	Seek Amendment	<p>Property Council strongly supports density near key transport nodes, especially those that connect larger commercial centres.</p> <p>However, we are concerned that Christchurch City Council is establishing public transport as a qualifying matter in order to reject future MDRS or proposed high-density areas. It is important that there be a co-ordinated approach between the delivery of future transport and housing projects.</p> <p>The Council is proposing to limit the extent of where the MDRS would be enabled to near the highest-frequency bus routes and routes that connect larger commercial centres. This Qualifying Matter focuses intensification within and around commercial centres. This is to promote the use of public transport and reduce dependency on the use of private vehicles. The Qualifying Matter would not restrict any current Residential Medium-Density Areas or proposed High-Density Areas.</p>	Support
William Bennett/ #255.6		Seek Amendment	Introduce a TC3 land QM.	
William Bennett/255.6	Kāinga Ora/ #FS2082.213	Seek Amendment	<p>Introduce a TC3 land QM.</p> <p>In addition, we note that there may also be further constraints to High (or even Medium) Density development in the area, which is identified as TC3 land and much of which is also in the Council's own Flood Plain overlay. That is not to mention potential parking issues that would likely be created if there was a proliferation of High Density accommodation.</p> <p>We acknowledge that this may not be the only area in Christchurch that holds these fears. We are firmly of the view that such views should not be unnecessarily discounted, where they can be justified.</p>	Oppose
Eriki Tamihana/ #277.4		Seek Amendment	[Remove QM Low Public Transport Accessibility]	
Eriki Tamihana/277.4	Kāinga Ora/ #FS2082.229	Seek Amendment	[Remove QM Low Public Transport Accessibility] Having ""Low Public Transport Accessibility"" is a very poor qualifying matter and reason to not zone large portions of the city as MDRS. Christchurch is not a large city, and developments in those areas could be serviced by cycling, private cars or buses - how hard can it be to put a new bus route through these areas?	Support
Waipapa Papanui-Innes-Central Community Board/ #288.7		Support	The Board supports all Qualifying Matters.	
Robert Fletcher/ #307.3		Oppose	[Seeks to reduce or remove the number of qualifying matter exceptions added since last year.]	
Robert Fletcher/307.3	Christchurch International Airport Limited/ #FS2052.78	Oppose	[Seeks to reduce or remove the number of qualifying matter exceptions added since last year.] I am dissatisfied with the number of qualifying matter exceptions added since last year which detract from this, especially zones of 'little or no public transport' which clearly can and would change once sufficient density is achieved, as well as an the airport contour zone, which I think has very little impact on the livability of those areas. These don't seem like good and genuine reasons why intensification should be constrained. I	Oppose

			<p>There is no justification and it is potentially unlawful to reduce density due to transport accessibility given that provision of space for private transport mitigates this impact.</p> <p>If this is a valid qualifying matter it defeats the entire purpose of the legislation which is to enable affordable housing supply, as it grants a council the option to zone the city essentially as per the status quo. It is also questionable how recession plane and road setbacks are affected by transport accessibility.</p> <p>Furthermore the location of these zones is questionable, take the area between Innes Rd, Rutland and Cranford Sts; and also the area around Autumn Pl on Winters Rd. Both locations are immediately adjacent to major cycleways, a major arterial and within a very short walk of Cranford St bus stops. They are also only a short distance to Merivale and Papanui shopping. There appears to be little validity in the qualifying matter.</p>

Margaret Stewart/ #755.6		Seek Amendment	Make the residential red zone (Otakaro River Avon Corridor) a Qualifying Matter.	
Margaret Stewart/755.6	David Mountfort/ #FS2070.11	Seek Amendment	<p>Make the residential red zone (Otakaro River Avon Corridor) a Qualifying Matter.</p> <p>The residential red zone (Otakaro River Avon Corridor) needs to become a qualifying matter. Allowing future housing to be built in these areas makes a mockery of the people forced to leave their properties because they thought they didn't have any choice. No one suggested they could have off the grid electricity and sewage systems. They did not receive enough money to purchase a property of equal value or even a replacement property. Red zone residential (ORAC) should stay red zone, never to be built on again. A memorial to the previous owners who were coerced into leaving their properties, not somewhere to be rebuilt with housing and sold at huge profits. The land is unstable during earthquakes, and we need to learn not to repeat the same mistakes going forward.</p>	Oppose
Mary O'Connor/ #778.3		Support	Consider making the earthquake damage risk to dwellings a Qualifying Matter.	
Mary O'Connor/ #778.4		Support	[Supports] the [retention of the] sunlight Qualifying Matter.	
Jessica Adams/ #784.3		Seek Amendment	Add QM to take account of geology in relation to ground strength and liquefaction risk	
Jessica Adams/784.3	Cheryl Horrell/ #FS2086.3	Seek Amendment	<p>Add QM to take account of geology in relation to ground strength and liquefaction risk</p> <p>The geology of Christchurch is not identified as a Qualifying Matter and it should be as the ground strength is important in terms of the structures and intensification that can be sustained. Immediately after the earthquakes height limits were imposed for all construction however housing intensification plans would permit building activity at the other end of the spectrum.</p> <p>There has been no consideration that Christchurch is different geologically to many other areas and will continue to be earthquake prone and therefore should not be subject to the same housing intensification rules as other parts of NZ. Eg This clause 5.1 j. In areas where there is likely to be a liquefaction risk to property, no specific measure of risk is applied.</p> <p>The area mapped is based on whether liquefaction is more likely to occur than not. Within that area, liquefaction risk and appropriate mitigation is assessed on a site-specific basis using best practice geotechnical and engineering methods to determine the performance of infrastructure and buildings. This is just not adequate for Chch</p>	Support
Greg Partridge/ #794.8		Seek Amendment	The submitter requests that the area of South Richmond be made exempt from housing intensification via a qualifying matter due to natural hazard risks, in particular risk from future earthquakes and flooding.	

			Its proximity to the Red Zone and the propensity for the land in this area to suffer significant structural damage when the Southern Fault Line ruptures (or the Christchurch Fault or Greendale Fault ruptures again) means it would be foolhardy of the Council to allow increased intensification to proceed in this part of the city.	
Greg Partridge/794.8	Anne Dingwall/ #FS2037.731	Seek Amendment	<p>The submitter requests that the area of South Richmond be made exempt from housing intensification via a qualifying matter due to natural hazard risks, in particular risk from future earthquakes and flooding.</p> <p>Its proximity to the Red Zone and the propensity for the land in this area to suffer significant structural damage when the Southern Fault Line ruptures (or the Christchurch Fault or Greendale Fault ruptures again) means it would be foolhardy of the Council to allow increased intensification to proceed in this part of the city.</p> <p>The submitter is concerned that natural hazard risks have not been adequately considered in implementing central government's requirements for housing intensification and development of qualifying matters. The submitter has provided extensive commentary on hazards in their submission. The submitter's analysis of earthquake and flood hazard risks to South Richmond and Christchurch in general can be summarised as follows:</p> <p>Earthquake Risk</p> <ul style="list-style-type: none"> - The Christchurch Fault is an active seismic fault that runs under the city from close to Riccarton through to the eastern suburbs and off the coast of New Brighton. It is believed to have been responsible for the series of earthquakes that rocked the city on Boxing Day 2010 and may have caused the damaging earthquake of 1869. - The Christchurch Fault runs parallel to the more destructive Port Hills Fault which lies 5km to the south. - Christchurch sits within relatively close proximity to the Alpine Fault, one of the most active fault lines in the world, and one that has a history of sudden movement. The fault has ruptured four times in the past 900 years, each time producing an earthquake of about magnitude 8. - Seismic activity caused a lot of land in Christchurch to subside during the destructive Canterbury earthquakes of 2011 and 2012. - Computer modelling indicates that when the Alpine fault ruptures it will cause significant levels of peak ground velocity – the trampolining effect – meaning major structural damage to houses, commercial buildings and land here in Christchurch is almost certain, and will be widespread. It will produce one of the biggest earthquakes since European settlement of New Zealand, and it will have a major impact on the lives of many people. - Christchurch will be impacted by widespread liquefaction, the land will further subside, roading and bridges will be left damaged or impassable and the underground infrastructure will not be left intact. <p>Flood Hazard Risk</p> <ul style="list-style-type: none"> - Currently as little as 30mm of rainfall is all that is necessary before surface flooding builds up in Christchurch. - Niwa meteorologists have indicated that climate change is making rain more intense and more frequent in Christchurch because of a warming atmosphere holds more moisture. - What climate change has done is beef up the weather making bad flooding more likely, and more frequent due to the effects of <ul style="list-style-type: none"> • Fluvial, or river floods – which occur when rivers burst their banks and flood the nearby lands. • Pluvial, or surface flooding - when the rain is just so heavy that it overwhelms local drainage • Coastal flooding, or storm surges – an occurrence when strong winds fling water onshore - Current projections show that in less than 80 years about 35% of Christchurch will be inundated and vulnerable to regular flooding. Low-lying areas of the city – areas that used to be wetlands prior to European settlement – are most at risk, and they are not just coastal areas. Suburbs in central Christchurch that are earmarked for accelerated intensification, such as Edgware and St Albans are prone to flooding. 	Support

			<p>- It would be reckless and irresponsible for Council allowing development to occur in flood prone areas and those that will flood in the future. Increasing the height of foundations and floor levels will not protect residents from having to be rescued from flood-stricken properties nor the massive costs of repairing flood damaged properties.</p> <p>- Controversial plans to increase housing density across Auckland have been delayed by a year, so that Auckland Council can assess the impact of the recent floods and decide where homes should be built. The government has given the council the extra time, but also wants Auckland to consider how more intensification might be possible in “resilient” parts of the city.</p> <p>- With Christchurch being flood prone and highly susceptible to significant seismic activity, surely the Christchurch City Council should be pointing that out to Central Government and asking them to quantify how resilient any part of the city actually is.</p>

Susanne Trim/ #37.1		Support	[S]upport the modifications proposed to the National MDRS under the qualifying matters provision.	
Susanne Trim/37.1	Anne Dingwall/ #FS2037.60	Support	[S]upport the modifications proposed to the National MDRS under the qualifying matters provision. I support the modifications proposed to the National MDRS under the qualifying matters provision.	Support
Susanne Trim/ #37.3		Seek Amendment	Special consideration to intensification proposals needs to be given due to flooding potential.	
Susanne Trim/37.3	Anne Dingwall/ #FS2037.62	Seek Amendment	Special consideration to intensification proposals needs to be given due to flooding potential. Special consideration to intensification proposals needs to be given due to flooding potential as areas of Christchurch are so low lying and in the Waimakariri flood plain and mapping of areas subject to liquefaction in the event of an earthquake. Residential intensification should not occur in these areas.	Support

The Riccarton Bush Trust/ #44.1		Support	Support[s] the inclusion of the Riccarton Bush Interface Area.	
The Riccarton Bush Trust/44.1	Anne Dingwall/ #FS2037.67	Support	<p>Support[s] the inclusion of the Riccarton Bush Interface Area.</p> <p>The Riccarton Bush Act 1914 details that the Mayor of Christchurch accepted the gift of Riccarton Bush to the people of Canterbury, with inter alia, the condition that the said property shall be used and kept for all time for the preservation and cultivation of trees and plants indigenous to New Zealand.</p> <p>There is simply no other similar combination of indigenous trees and shrubs on the face of the earth; let alone anything similar in New Zealand. It is the largest remnant of alluvial podocarp forest on the lower Canterbury Plains and Banks Peninsula, a forest type that today only covers a tiny fraction of its former extent. It is a key mahinga kai site for Ngāi Tūāhuriri, and the place of first permanent European settlement in Ōtautahi. The Riccarton Bush Board was established in 1914 and one of its key roles is to Protect and enhance the indigenous flora, fauna and ecology of Pūtaringamotu /Riccarton Bush, including mahinga kai and taonga species.</p> <p>Pūtaringamotu/Riccarton Bush has exceptionally high ecological and cultural values that housing intensification has the likelihood to adversely impact. These values are clearly recognised through the site being protected by its own Act of Parliament, the site meeting Section 6(b), 6(c) and 6(e) criteria in the RMA and by the site being mapped as a Site of Ecological Significance in the Christchurch District Plan.</p> <p>The Riccarton Bush Trust (Board) acknowledges the work that the Council has done on proposing a Riccarton Bush Protection Zone that covers approximately 180 properties surrounding the Riccarton Bush Property. The Council commissioned reports from Manu Whenua and from Heritage Landscape expert, Dr Wendy Hodinott to inform its decision. It is disappointing that no consideration was given to any report on the impact of intensification on the health and longevity of the Bush, which is of great concern to the Board.</p> <p>While any housing intensification will not take place within Pūtaringamotu, the scale and extent of such intensification, in such close proximity, continues to raise the following concerns:</p> <p>Ground disturbance associated with building adjacent to Pūtaringamotu. Construction of buildings will require foundations which have the potential to impact Pūtaringamotu by:</p> <ul style="list-style-type: none"> a) Affecting mature tree root systems, both structurally and in terms of the volume of soil from which they are able to absorb nutrients and water, leading to tree ill-health and potentially dieback in Pūtaringamotu. b) Affecting soil hydrology and particularly the lateral movement of water through the soil, which will lead to reduced water available for native vegetation within Pūtaringamotu. <p>Loss of greenspace adjacent to Pūtaringamotu through increasing site coverage and reducing the minimum site size. With intensification it is proposed to increase site coverage from a maximum of 35% to 50% (in the MRZ), and to reduce minimum lots sizes from 450 m² to 400 m². In addition, the intensification rules suggest that the area of green space only needs to be 20% of the site. In total this will have adverse impacts on Pūtaringamotu including in the following ways:</p> <ul style="list-style-type: none"> a) It will reduce the amount of habitat (especially trees) for native fauna, especially as corridors for bird movement. This will have significant impacts on mobile fauna such as kereru, korimako and tui which require areas larger than Pūtaringamotu for viable populations. b) Further affect soil hydrology by reducing the amount of soft/green permeable surfaces through which rainfall can percolate into the ground, with a much greater area of water being lost via hard surfaces into the storm water system. 	Support

			<p>This will lead to reduced water available for native vegetation within Pūtaringamotu.</p> <p>Increased intensification adjacent to Pūtaringamotu altering local microclimates. This will have direct impacts on the vegetation and hence habitat quality for fauna proportional to the height of structures by:</p> <ul style="list-style-type: none"> a) Shading parts of the bush, thereby reducing photosynthesis. b) Creating potentially strong wind funnelling effects that can cause increased transpiration from foliage and potentially cause physical damage. c) Leading to increased air temperatures due to urban heat island effects. This again can affect plant photosynthesis and respiration in the bush. d) Increased light pollution from taller buildings impacting bird, gecko and insect behaviour within the bush <p>Reverse sensitivity effects towards Pūtaringamotu. Caused by people living close to the bush perceiving the bush as having adverse effects on them resulting in:</p> <ul style="list-style-type: none"> a) Residents placing pressure on the Council to have trees trimmed, thinned or even removed because they cast shade on their apartments, thus reducing the values of Pūtaringamotu. b) Residents placing pressure on the Council to prune roots or have trees removed for their perceived or actual damage to infrastructure (below ground utilities, paved areas, fence and building foundations).

Brighton Observatory of Environment and Economics / #53.2		Oppose	Oppose Sunlight Access Qualifying Matter	
Brighton Observatory of Environment and Economics /53.2	Anne Dingwall/ #FS2037.85	Oppose	<p>Oppose Sunlight Access Qualifying Matter</p> <p>Sunlight Access QM</p> <p>Local government has amongst its responsibilities implementation of national guidance and regulations into local systems and plans. Clearly this will often be nuanced to reflect local character and conditions. If Sunlight Access is included as a QM then this is likely to:</p> <p>a. significantly delay the intensification process: it would allow retention of current or similar height/stories restrictions on new builds which would stall construction of higher buildings over the whole city.</p> <p>b. Further restrict the planting of trees which apart from their positive effect on biodiversity, Carbon draw-down, well-being and land stabilization, would lower the heat island effect of the city, hence reduce the impact on residents of the more intense and frequent heatwaves predicted by climate change.</p> <p>Both of these implications are exactly counter to the direction of travel implied by good and timely adaptation to climate change, as well as that implied by central government in the recent NPS on highly productive land. We estimate resolution of the underlying issue (including Sunlight Access as a QM) pushes back intensification by at least a further two years plus planning time (i.e. it is not possible to construct the business plan for these types of development when extant regulation effectively does not permit them).</p> <p>“Many other cities in the Northern Hemisphere with latitudes equivalent or further from the equator than Christchurch have very liveable cities with high density living, therefore sunshine is not an issue if we use these cities as example to develop towards.1”</p> <p>It seems to us that this QM has the same effect as a Trojan Horse to prevent the intensification process in Christchurch.</p>	Oppose

Brighton Observatory of Environment and Economics / #53.3		Oppose	Include Tsunami Risk Area in Natural Hazards Qualifying Matter	
Brighton Observatory of Environment and Economics /53.3	Toka Tū Ake EQC ./ #FS2075.30	Oppose	<p>Include Tsunami Risk Area in Natural Hazards Qualifying Matter</p> <p>Inclusion of Tsunami Risk Area in Natural Hazards QM It is obvious that the planning system should be used to reduce development in areas that are exposed to well quantitated very high risks of significant damage from natural hazards on short timescales. However, unless there is a reasonably good understanding of the scale and timescale of the hazard, and that timescale is short (typically, less than a human lifetime), heavy regulation can have the effect of causing social and economic damage for no good reason, e.g. moving communities out of areas too soon, when in reality those communities could have stayed for another 50-100 years. The issue with including tsunamis in the definition of the coastal hazard zone, is the zone is stretched unrealistically. This bloated coastal hazard zone is then based not on our knowledge, but rather our lack of it. For example the mapping of the zone includes about a 1m seal level rise (by 2100) plus the effect of a major tsunami (we estimate 5-10m), that affects the NZ South Island eastern seaboard. This series of sequential over-estimations produce a practically impossible scenario and an unrealistic estimation of the zone: • the tsunami must occur after the 1m of sea-level rise (CCC posited as 2100). The IPCC (the world consensus of scientific and social knowledge about climate change) now consider sea-level rise of 1m by 2100 a large over-estimate, or in their own words, 'not realistic'. • the vast majority of tsunamis arriving here are small enough not to be noticed, and only two seismic sources (Cook Strait and South American seaboard) realistically would affect the Christchurch coastline. • the data (see below) produces a very weak prediction and does not support the assessment of this hazard to be likely enough or large enough to be included in definition of the coastal hazard zone. Although both tsunamis and earthquakes are natural hazards, the occurrence of neither is particularly predictable. Whereas deaths in our (NZ) recorded history from earthquakes is about 500, only 1 death has been recorded from tsunamis. Clearly prior to that history there have been significant earthquakes and tsunamis that have potentially caused deaths and devastation. However, principally due to our lack of understanding of the detail of processes that cause earthquakes and/or tsunamis at a particular time and place, we use frequencies of event occurrence in the past as a proxy for prediction. Typically this leads to what can be very weak estimates, for example: "...A total of 24 tidal waves classified as a tsunami since 1855...The strongest tidal wave registered in New Zealand reached a height of 15 meters (02/02/1931)...The biggest impact in terms of lives and the economy has been a tsunami on 08/13/1868. A tidal wave of up to 4.5 meters killed 1 person and destroyed vast areas2." Even strong predictions of these hazards carry with them many assumptions, incomplete records, and statistical uncertainty, for example... "...The NZ Alpine fault fails in a magnitude 8 earthquake about every 330 years3...". ... does not rule out two magnitude 8 earthquakes from the Alpine fault 100 years apart or one in 600 years.</p> <p>Our current state of knowledge does not allow for any reasonable forecast of the timescale of a large tsunami that would justify the size of the proposed coastal hazard zone.</p>	Oppose

Tom Logan/ #187.5		Oppose	<i>[Drop the Sunlight Access Qualifying Matter]</i>	
Tom Logan/187.5	Kāinga Ora/ #FS2082.88	Oppose	<p><i>[Drop the Sunlight Access Qualifying Matter]</i></p> <p>The council's claim that 96% of housing capacity is retained under the Sunlight Access QM is misleading. CCC's Impact Assessment on the Sunlight Access QM only includes the effect on RS zones transitioning to MRZ. This ignores the impact on areas zoned as RMD that are transitioning to MRZ, or areas zoned HRZ. RMD and HRZ sites are more impacted by recession planes than RS, given they tend to be smaller. The example RS site, that is used to demonstrate the supposed loss in capacity, is 750 m². More than 50% of RMD sites and 2/3 of HRZ sites are less than 700 m². This means that the</p>	Support

			<p>impact of applying recession planes is much more severe than for RS sites. Using an RS site as an example hides a much greater loss in housing capacity. We oppose the Sunlight Access QM on this basis, given it will result in a much greater loss in housing capacity than anticipated.</p> <p>The broad application of the Sunlight Access QM across the city is disappointing and counterproductive. This broad application contradicts the intention of the MDRS, which was to allow 3-storey, 3-unit development across all urban areas in New Zealand. We also believe that amenities other than sunlight should have been considered. NPS-UD Policy 6(b)(ii) states that the significant changes to built form required "... may detract from amenity values appreciated by some people but improve amenity values appreciated by other people, communities, and future generations, including by providing increased and varied housing densities and type". This perspective should have been considered by the council when implementing the Sunlight Access QM. If increased sunlight access results in decreased housing affordability, as well as decreased access to employment, services, and amenities, is it really worth it?</p>	
Tom Logan/ #187.7		Seek Amendment	<i>[Regarding Riccarton Bush Interface Qualifying Matter]</i> reduce proposed area to <i>[the adjoining sites]</i> being 40 houses.	
Tom Logan/187.7	Christchurch International Airport Limited/ #FS2052.239	Seek Amendment	<p><i>[Regarding Riccarton Bush Interface Qualifying Matter]</i> reduce proposed area to <i>[the adjoining sites]</i> being 40 houses.</p> <p>We disagree with the extension of the Riccarton Bush interface. Allowing more houses in the Riccarton Bush area does not reduce the amenity but shares it. The danger of including this QM is that it solely benefits existing wealthy homeowners who can afford to live in the area by keeping house prices close to the Bush at unobtainable levels. The extension of the interface is justified by a desire to maintain views of the Bush from streets in the area. This mostly amounts to views of distant treetops, largely indistinguishable from the various street-trees and private plantings. The true amenity of the Bush is in its accessibility from the surrounding area, especially given it is intersected by the Uni-Cycle MCR. This accessibility would only be increased if more people were permitted to live within the general vicinity of the Bush, and as such the amenity provided by the Bush would increase.</p> <p>The application of the Riccarton Bush interface is at odds with the NPS-UD. NPS-UD allows for QM to restrict development in "open space provided for public use, but only in relation to the land that is open space" (NPS-UD 2020 3.32 1 (d)) or "an area subject to a designation or heritage order but only in relation to the land that is subject to the designation or heritage order" (NPS-UD 2020 3.32 1 (e)). This QM is applying density control to sites not included in the protected extent of either Riccarton Bush, nor the surrounding grounds of Riccarton House, nor land zoned as open space. The Section 32 report mentions that solely limiting the interface to adjoining sites (rather than the much greater area proposed in the QM) would have the effect of "...ensuring that Riccarton Bush is protected from the effects of medium density development" and that "the values of Riccarton Bush itself would not be degraded", and "this approach is effective at addressing the issue". This option should have been implemented in the QM, rather than the expansive area that is currently proposed</p>	Oppose

NPS-UD allows for QM to restrict development in "open space provided for public use, but only in relation to the land that is open space" (NPS-UD 2020 3.32 1 (d)) or "an area subject to a designation or heritage order but only in relation to the land that is subject to the designation or heritage order" (NPS-UD 2020 3.32 1 (e)). This QM is applying density control to sites not included in the protected extent of either Riccarton Bush, nor the surrounding grounds of Riccarton House, nor land zoned as open space. The Section 32 report mentions that solely limiting the interface to adjoining sites (rather than the much greater area proposed in the QM) would have the effect of "...ensuring that Riccarton Bush is protected from the effects of medium density development" and that "the values of Riccarton Bush itself would not be degraded", and "this approach is effective at addressing the issue". This option should have been implemented in the QM, rather than the expansive area that is currently proposed</p>	Oppose
Tom Logan/187.7	Kāinga Ora/ #FS2082.90	Seek Amendment	<p><i>[Regarding Riccarton Bush Interface Qualifying Matter]</i> reduce proposed area to <i>[the adjoining sites]</i> being 40 houses.</p> <p>We disagree with the extension of the Riccarton Bush interface. Allowing more houses in the Riccarton Bush area does not reduce the amenity but shares it. The danger of including this QM is that it solely benefits existing wealthy homeowners who can afford to live in the area by keeping house prices close to the Bush at unobtainable levels. The extension of the interface is justified by a desire to maintain views of the Bush from streets in the area. This mostly amounts to views of distant treetops, largely indistinguishable from the various street-trees and private plantings. The true amenity of the Bush is</p>	Support

			<p>in its accessibility from the surrounding area, especially given it is intersected by the Uni-Cycle MCR. This accessibility would only be increased if more people were permitted to live within the general vicinity of the Bush, and as such the amenity provided by the Bush would increase.</p> <p>The application of the Riccarton Bush interface is at odds with the NPS-UD. NPS-UD allows for QM to restrict development in “open space provided for public use, but only in relation to the land that is open space” (NPS-UD 2020 3.32 1 (d)) or “an area subject to a designation or heritage order but only in relation to the land that is subject to the designation or heritage order” (NPS-UD 2020 3.32 1 (e)). Figure 1 - Riccarton Bush Kilmarnock Residents' Association area

Riccarton House is the original site of European settlement in Christchurch. Ngāi Tuahiwi lived in the area before Europeans arrived. The area is a treasure because it tells a story of indigenous settlement, then European settlement, conflict, cooperation, and development. Despite change over time, much of the area's character remains, and what is left should be protected. There are important heritage buildings and trees scattered throughout old Riccarton. The precinct still includes a large number of late 19th century to mid-20th century residences plus:

- Mona Vale on the north-eastern boundary
- Britten Stables
- The city to university cycleway along Matai St West and Ngahere St.
- Riccarton House and its surrounds (including the Kauri Cluster, Kahu Road and Totara Street)
- Notable trees
- The original Riccarton Estate farm buildings
- the historic Kahu Rd bridge
- Janes Deans Close war memorial
- Christchurch Boys High School buildings and war memorial
- Most importantly, Pūtaringamotu, part of which the Deans family retained for preservation as Riccarton Bush. That stand of ngahere is a taonga and almost all that is left of the original indigenous forests of the plains.

The residents in our area have already been through the intensification debate once already. There were lengthy proceedings prior to 2015, before an Independent Hearings Panel, considering the Christchurch Replacement District Plan. Its deliberations were based on evidence, not government-imposed dictates. It ruled medium density was not appropriate in our area. Seven years after that review we have enough houses in Christchurch and ample land on which to build more. The argument today, in favour of more density across the entire city, is weak. There is nothing to suggest that panel's decisions, reached after thousands of pages of evidence were heard, should be overturned.

As part of that same district plan review, Character Areas, formerly known as Special Amenity Areas or SAMs, were reassessed to identify whether they remained distinctive with a residential character worthy of retention. Character Area 7, was the area north of Riccarton Road and east of Clyde Road, bounded by the Avon River to the north, and Riccarton Bush to the south-east. It included Totara, Hinau, Miro and Konini Streets and major section of Puriri St. The report determined, given the circumstances at the time, the existing character areas should not be retained. We think it was a short-sighted decision. However, while it was determined there were insufficient groupings of properties for this area to be retained as a Character Area, the report did acknowledge the area has defining elements that include; the quality of the streetscape, the large building setbacks, the visual relationship to Riccarton Bush and the Avon River and the resulting unusual street layout.

Riccarton landscape architect and New Zealand Institute of Landscape Architects member, Graham H. Densem BA DipLA (Cant) ANZILA supports the concept of a designated Pūtaringamotu-Riccarton area that includes the wider area of Westfield Mall and surrounds, including residential areas and the bush. Such a plan he said would better identify more and less desirable development places. A step towards that, we submit, is to designate the Riccarton Bush Kilmarnock area a Qualifying Matter pending a more cohesive, planned, controlled approach to future development.

Robert Black/ #246.2		Seek Amendment	Include the Flood Management Area, or at least that part of the FMA in the Merivale catchment, as a Qualifying Matter to exclude MDRS rules from applying.	
Robert Black/246.2	Kāinga Ora/ #FS2082.207	Seek Amendment	<p>Include the Flood Management Area, or at least that part of the FMA in the Merivale catchment, as a Qualifying Matter to exclude MDRS rules from applying.</p> <ul style="list-style-type: none"> I understand from a newspaper article that the area around our residence is one of the two lowest parts of Christchurch (the other being the Flockton Basin) in respect of being at risk for one in 50, one in 100 and one in 200 year flood events. This aligns with my experience in the area. In recent years we have had issues such as: <ol style="list-style-type: none"> Flooding, with the Wairarapa stream having risen to the bottom of bridges several times. If it broke its banks it would flood Queens Avenue and Garden Road. Stormwater systems have clearly been at capacity, with some overflow. In recent flooding events a neighbouring section has been almost entirely covered in surface water flooding. As night follows day, a site with intensive housing development generates more stormwater, due to increased hardstand area (three houses compared with one), and reduced area available for landscaping and lawn that slows stormwater transfer to the public system. This area is an identified Flood Management Area in the District Plan. In particular, this means that new builds sit significantly higher than adjacent older homes. These older homes will be particularly at risk from future flooding if housing intensification is allowed to occur, as the increased stormwater run-off will exacerbate existing flooding issues. 	Oppose
Robert Black/ #246.3		Seek Amendment	Consider infrastructure limitations, and map areas as qualifying matters where infrastructure is not sufficient for intensive development.	
Robert Black/246.3	Kāinga Ora/ #FS2082.208	Seek Amendment	Consider infrastructure limitations, and map areas as qualifying matters where infrastructure is not sufficient for intensive development.	Oppose

			<ul style="list-style-type: none"> I see that the CCC has already introduced infrastructure shortcomings as a Qualifying Matter as part of PC14. I support this approach wholeheartedly, but consider that its application needs to be taken further. In this area, a lot of the local infrastructure was replaced after the earthquake. However, I understand that was done on the basis of the then expected density, not the default proposed here of three dwellings for every site. I do not believe it has the capacity to serve this higher density. It is not unrealistic to consider that this intensification could occur in the short term; within 20 metres of our house there are two bare land sections, one house awaiting demolition and another planned for this. Nine extra houses could be built within a stone's throw. 	
Robert Black/ #246.4		Seek Amendment	List TC3 land as a Qualifying Matter. As a default, that land should not be intensively developed. It is appropriate to obtain resource consent to[o]	
Robert Black/246.4	Kāinga Ora/ #FS2082.209	Seek Amendment	<p>List TC3 land as a Qualifying Matter. As a default, that land should not be intensively developed. It is appropriate to obtain resource consent to[o]</p> <ul style="list-style-type: none"> The soil here is TC3, and the damage that the area obtained following the earthquake was significant. In particular: <ol style="list-style-type: none"> The vast majority of houses in this locality were replaced after the earthquake – it was one of the worst hit areas in Christchurch and I am sure it had the highest infrastructure replacement and house replacement cost per square metre of anywhere. The subsoil liquefies readily. We had one of Christchurch's highest accelerations from the February earthquake measured by a seismograph at our home – .88g. As a result of that, we had a GNS scientist write to us to enquire whether there was any reason for this exceptional reading in relation to the placing of a seismograph. There was no reason; it was just the force of acceleration in this area (possibly due to a "basin" underneath the surface – a trampoline effect). A civil engineer working on the new sewer system down our street remarked that if this land had been in eastern side of Christchurch then it would have been red zoned due to the extensive land damage. When replacing the sewer main they were working nearly 2 m down in liquid soil. Power: I understand that a power company was already struggling to provide power for a recent subdivision of just one section. In particular I was told the landowner requested three-phase power but connection was not possible. My understanding of how that resolved is that power was provided to the new site, but with difficulty. I wonder if the implications on power companies have been considered as part of these qualifying matter The reasons for the above damage have not changed. Any future earthquake could result in the same level of damage, to both homes, infrastructure and land. Houses will tip and sink. 	Oppose

Waipapa Papanui-Innes-Central Community Board/ #288.1		Support	[S]eeks the advancement of the signalled Qualifying Matters and mechanisms protecting sunlight access.	
Waipapa Papanui-Innes-Central Community Board/288.1	Anne Dingwall/ #FS2037.403	Support	<p>[S]eeks the advancement of the signalled Qualifying Matters and mechanisms protecting sunlight access. The Board acknowledges government legislation directing changes, and that the National Policy Statement on Urban Development 2020 requires greater building development – both residential and commercial. It does though wish to re-emphasise some of the previous points of the Papanui-Innes and Linwood-Central-Heathcote community boards still considered relevant. Within the Papanui area, for example, where high level development is proposed, the Board considers that there must be emphasis given to additional community spaces, transport infrastructure, schooling and other key components of the health and wellbeing of our communities. The Board supports the proposed changes generally speaking, however strongly recommends strategic planning and looking ahead to, for example, 15-Minute City, 5-Minute Neighbourhoods, and a city for the future. The Board supports the proposed Qualifying Matters. The Board believes that central city residents are comfortable with intensification, however established parts of the city within the four avenues, particularly north of Cathedral Square, have been concerned with the proposed higher density and heights of buildings above three stories which impinges on neighbours' sunlight including residences with solar panels. The Board commends the proposal for a Qualifying Matter to protect sunlight access for homes. The Board is concerned that high intensity development has the potential to lead to issues of anti-social behaviour thus increasing the impact on New Zealand Police, and mental health services resources that are already highly stressed. The Linwood-Central-Heathcote Community Board continually heard of issues from its Phillipstown residents who are experiencing high density in a low social-economic area. The Board notes that while economic and environmental impacts have been considered they do not feel that the social and well-being consequences have been considered as thoroughly. The Board recognises that onsite parking is not a provision for residential development, however the Board wants to have compulsory provision introduced for loading bays and accessible parking. The Board believes there is a need to review options whereby residents could request resident-only parking through a permit system. The Linwood-Central-Heathcote Community Board acknowledged the lack of tree canopy within its Board area and developed the Greening the East Development Plan to increase the tree canopy and to contribute to decreasing the impact of climate change and increase habitat for native wildlife. This impacts the wider Board area now. The Board commends the proposal for a mechanism to help maintain the city's tree canopy cover on land that is subdivided, whereby financial contributions could be required from those developing land that do not keep existing trees or plant 20% tree canopy cover on a site, and 15% tree canopy over any new road. The Board advocates that financial contributions from impacts from developers be available for land purchases for greenspace for the purpose of planting canopy trees where there is a need and it is appropriate. The Board having reviewed maps of the Board area considers there are some needs for additional greenspace, particularly around St Albans. The Board also supports the proposal to identify protected trees listed in the current District Plan as a Qualifying Matter. The Board highlights community concerns that infrastructure may not be adequate to support continual growth through intensification. Concerns raised include a lack of amenities, community facilities and recreational greenspace, and the effects of intensification on transport corridors and networks. The Board urges that changes have a view to retaining spaces for community facilities, sport and recreation facilities, greenspace, and amenities in areas of high intensification, and areas earmarked for future intensification. Auditing and benchmarking for the provision of these amenities should inform these discussions. The Board will be advocating through the Long Term Plan and other such avenues for the retention of greenspace as parks, pocket parks, or gathering spaces for community use, and to</p>	Support

			advocate that planning changes support that flood mitigation is considered in new developments to ensure existing networks are not overwhelmed and can remain effective in significant rain events. The Board wishes to especially ensure three waters infrastructure is able to appropriately manage and support intensification and development, with flood mitigation projects investigated and implemented where necessary. Finally, the Board suggests that any opportunity for the goals of the Ōtautahi Christchurch Climate Resilience Strategy and the Ōtautahi-Christchurch Urban Forest Plan to be reflected here is seized.	
Waipapa Papanui-Innes-Central Community Board/288.1	Cambridge 137 Limited/ #FS2042.34	Support	[S]eeks the advancement of the signalled Qualifying Matters and mechanisms protecting sunlight access. The Board acknowledges government legislation directing changes, and that the National Policy Statement on Urban Development 2020 requires greater building development – both residential and commercial. It does though wish to re-emphasise some of the previous points of the Papanui-Innes and Linwood-Central-Heathcote community boards still considered relevant. Within the Papanui area, for example, where high level development is proposed, the Board considers that there must be emphasis given to additional community spaces, transport infrastructure, schooling and other key components of the health and wellbeing of our communities. The Board supports the proposed changes generally speaking, however strongly recommends strategic planning and looking ahead to, for example, 15-Minute City, 5-Minute Neighbourhoods, and a city for the future. The Board supports the proposed Qualifying Matters. The Board believes that central city residents are comfortable with intensification, however established parts of the city within the four avenues, particularly north of Cathedral Square, have been concerned with the proposed higher density and heights of buildings above three stories which impinges on neighbours' sunlight including residences with solar panels. The Board commends the proposal for a Qualifying Matter to protect sunlight access for homes. The Board is concerned that high intensity development has the potential to lead to issues of anti-social behaviour thus increasing the impact on New Zealand Police, and mental health services resources that are already highly stressed. The Linwood-Central-Heathcote Community Board continually heard of issues from its Phillipstown residents who are experiencing high density in a low social-economic area. The Board notes that while economic and environmental impacts have been considered they do not feel that the social and well-being consequences have been considered as thoroughly. The Board recognises that onsite parking is not a provision for residential development, however the Board wants to have compulsory provision introduced for loading bays and accessible parking. The Board believes there is a need to review options whereby residents could request resident-only parking through a permit system. The Linwood-Central-Heathcote Community Board acknowledged the lack of tree canopy within its Board area and developed the Greening the East Development Plan to increase the tree canopy and to contribute to decreasing the impact of climate change and increase habitat for native wildlife. This impacts the wider Board area now. Exsto Architecture/ #293.4		Support	[S]upports the MDRS rule change and the Qualifying Matter proposals.	
Luke Cairns/ #299.1		Seek Amendment	[F]or the council to accept PC14, with the proposed sunlight-qualifying matters removed.	
Luke Cairns/299.1	Anne Dingwall/ #FS2037.409	Seek Amendment	[F]or the council to accept PC14, with the proposed sunlight-qualifying matters removed. I am writing to express my strong disagreement with the proposed Sunlight Access Qualifying Matter for Christchurch. After thoroughly reviewing the submission document, I firmly believe that this proposal will hinder housing intensification and negatively impact our city's growth. Christchurch's latitude compared to other Tier 1 councils, such as Auckland, does not warrant a significant deviation in recession plane angles. Implementing more restrictive building rules based solely on the colder climate is misguided and disregards the urgent need for housing intensification in our city. The proposed changes to recession plane angles and building setbacks will directly impede the development of higher-density housing, which is crucial for addressing the growing demand for affordable and diverse housing options in Christchurch. These restrictions will exacerbate urban sprawl, putting unnecessary strain on our city's infrastructure and natural resources, and will increase emissions as well as rates associated with non-productive urban sprawl. Many council members were elected on the promise of lowering rates, and they should be held accountable for their commitments. Thus, lowering our future rates with more intense housing should be a priority for you. Currently, renting an apartment for a single person can consume more than 50% of their weekly income. This is unacceptable, and people should not be forced to share living spaces with many strangers in 'flats' due to the lack of affordable housing options. We do not live in the Victorian era. Instead of a city-wide Qualifying Matter, I strongly recommend alternative strategies that support both sunlight access and housing intensification. Site-specific solutions that take into account a property's unique features and surroundings should be considered, and not included as default rules. Financial incentives, such as rebates for good design submitted after building completion and other incentives for planting native trees and aesthetic beauty, could encourage better development practices. I urge the Council to remove the sunlight-qualifying matters, ensuring a sustainable and vibrant future for Christchurch.	Oppose
Julia Mallett/ #304.1		Seek Amendment	Introduce a qualifying matter to reduced the MDZ around suburban schools	
Julia Mallett/304.1	Kāinga Ora/ #FS2082.241	Seek Amendment	<p>Introduce a qualifying matter to reduced the MDZ around suburban schools</p> <p>Introduce a qualifying matter to reduced the MDZ around suburban schools, to reduce strain on families priced out of these areas by development, to find a middle ground consisting of vibrant inner city density together with retention of the traditional kiwi neighbourhood a short commute from the city. Increase planting requirements by reducing density/height limits in MDZ. Require development to be in keeping with the style and sensibility of the existing neighbourhood. Understanding that not all suburbs can be legitimately captured by heritage orders, but nonetheless each have an ""era"" they are drawn from, and new developments should compliment these.</p> <p>I oppose the new Medium Density Zone being put in place in so much of suburban Christchurch. - high and medium density zoning is appropriate in the inner suburbs (Edgware, Sydenham, Phillipstown, Riccarton, inner City, and similar) to promote a vibrant city, and around shopping areas with close proximity to public transport hubs. HDZ and MDZ absolutely have their place. - The large numbers of families moving to the Selwyn and Waimakariri Districts, and to suburbs such as Northwood and Halswell, indicate that families would rather add to their commute to secure more affordable bungalow-style homes. -MDZ/HDZ are supported by those who believe that higher density is better for the environment, however, the large amount of commuter traffic would suggest that this is not the case. Families are by and large not choosing to shift their behaviour to living in townhouses, instead opting to move to outer suburbs that are not yet supported by frequent and reliable public transport. - Families are being priced out of their local areas by developers, even under the current rules. Increase density will not ease this, in fact the opposite. - free form development is often unattractive and not in keeping with the style of the area. There are some pockets of thoughtful development, but largely they are plain boxes that do not add to the visual landscape. This is not in keeping with our beautiful city. - Although there are requirements to have planting in the proposed plan, it does not go far enough. We are continuing to pave and cover our land, which will adversely impact the city during extreme weather events, which are becoming more frequent. -Largely townhouse developments already only come with a single (or no) garage per home. We hope that behaviour is changing and people are eschewing car ownership. However, again, the volume of traffic on the roads and cars parked on the roadside would suggest this behaviour change is very far away. Increasing the density with 3 homes of three stories, but presumably only one off-road carpark each, will further degrade the landscape of our suburban neighbourhoods.</p>	Oppose
Barry Newcombe/ #311.1		Seek Amendment	To include as a Qualifying Matter area the Opawaho Heathcote River corridor. It is not clear how 'corridor ' is defined but [submitter] expect[s] this will include a distance from the water?	
Barry Newcombe/311.1	Kāinga Ora/ #FS2082.261	Seek Amendment	To include as a Qualifying Matter area the Opawaho Heathcote River corridor. It is not clear how 'corridor ' is defined but [submitter] expect[s] this will include a distance from the water? PC 14 and PC13 Proposed changes outlined in Public Notice - Resource Management Act 1991 - Christchurch District Plan (distributed to households) section vi defines Qualifying Matters and lists a substantial number of sites/locations/features where qualifying matters apply. Included are Styx River setback and Otakaro Avon River corridor. A significant omission from the listed sites/locations/features is Opawaho Heathcote River corridor. This is as least as significant as the other rivers listed and is considerably more important to include than many of the other listings.	Oppose

David Mallett/ #343.1		Seek Amendment	[P]roximity to schools, in particular primary schools, added as another qualifying matter to restrict development around schools and promote the retention of the current housing stock that is ideally suited to young families.	
David Mallett/343.1	Anne Dingwall/ #FS2037.428	Seek Amendment	[P]roximity to schools, in particular primary schools, added as another qualifying matter to restrict development around schools and promote the retention of the current housing stock that is ideally suited to young families. I oppose the plan change. In particular I disagree with the proposed densification of housing in proximity to schools, especially primary schools. The increased density housing is not well suited to young families, and the newly developed houses are generally too expensive for young families. As a result we are seeing this in our community leading to a reduced primary school roll as families can't afford to live nearby, and a loss of community. If we have to grow and densify (which I philosophically disagree with) then I support the growth being close to commercial centres and public transport routes, however think that the importance of schools to the community have not been picked up in the plan change. In particular we are in the West Spreydon primary school area and I would like to see development reduced in this area.	Support

Jono de Wit/ #351.1		Seek Amendment	Seek to remove or significantly reduce the size of Riccarton Bush Interface Qualifying Matter is removed completely or reduced in size significantly so it is only on the north side of Riccarton bush - furthest away from the public transport corridor and town centre of Riccarton Road.	
Jono de Wit/351.1	Christchurch International Airport Limited/ #FS2052.240	Seek Amendment	Seek to remove or significantly reduce the size of Riccarton Bush Interface Qualifying Matter is removed completely or reduced in size significantly so it is only on the north side of Riccarton bush - furthest away from the public transport corridor and town centre of Riccarton Road. I generally support the changes to zoning and rules to allow people to build housing with higher density and more storeys on their land because it will allow the city to grow and house it's people without continually sprawling further and further out. It should result in more housing where people want to live for more affordable prices. It will allow more people to live closer to public transport, work and shops which will mean more people will be able to have a viable choice of taking public transport, walking or biking instead of adding to traffic jams. I do not support the Riccarton Bush interface qualifying matter because I do not believe it meets the strict requirements for a qualifying matter and it will have a large negative effect on the density which will be able to be built around the important Riccarton Road transport corridor and close to Riccarton central. It makes no sense to plan mass rapid transport down Riccarton road while at the same time severely limiting the amount of housing which can be built on the northern side of it in central Riccarton. I do not believe this QM is in the interest of the city or the people who may want to live close to Riccarton and the future MRT there. I do not support the sunlight QM because it will	Oppose

			<p>delay the MDRS and the tree financial contributions from taking effect and will likely result in a worse built form especially in the six storey zones due to the setbacks and recession planes required. I would support a sunlight QM if it had the same boundaries as the transport access QM so that it did not delay the MDRS in the most important areas and does not reduce the density able to be built in the six storey zones. The area north of Riccarton road and west of Straven Road should be HRZ not MRZ because limiting density near a main public transport route that is so close to Riccarton central and on a planned MRT route does not make sense. This should be where apartments are allowed to be built! I think the area of Riccarton road between Riccarton and Church Corner town centres should be included in the six storey zone. This will be an MRT route and it needs to be allowed to build apartments close to it. It does not make sense to have the HRZ zone go all the way south to Blenheim Road in Riccarton central, but then only have MRZ right on Riccarton road slightly West of Riccarton central. This is the area where I currently live. I think the Airport Noise Influence Area should be moved further back from Riccarton road to allow higher density close to this important public transport route. I do not support the Residential Heritage Area QM south of Shand Crescent in Riccarton for the same reasons. I do not think this area meets the threshold to be a protected area especially when it is located so close to Riccarton Road public transport corridor. I think the walkable catchment distances from town centres should be increased because they are quite short at the moment and allowing more people to live close to these centres will be a good thing.</p>	
Jono de Wit/351.1	Riccarton Bush Kilmarnock Residents Association ./ #FS2062.50	Seek Amendment	<p>Seek to remove or significantly reduce the size of Riccarton Bush Interface Qualifying Matter is removed completely or reduced in size significantly so it is only on the north side of Riccarton bush - furthest away from the public transport corridor and town centre of Riccarton Road. The area north of Riccarton road and west of Straven Road should be HRZ not MRZ because limiting density near a main public transport route that is so close to Riccarton central and on a planned MRT route does not make sense. This should be where apartments are allowed to be built! I think the area of Riccarton road between Riccarton and Church Corner town centres should be included in the six storey zone. This will be an MRT route and it needs to be allowed to build apartments close to it. It does not make sense to have the HRZ zone go all the way south to Blenheim Road in Riccarton central, but then only have MRZ right on Riccarton road slightly West of Riccarton central. This is the area where I currently live. I think the Airport Noise Influence Area should be moved further back from Riccarton road to allow higher density close to this important public transport route. I do not support the Residential Heritage Area QM south of Shand Crescent in Riccarton for the same reasons. I do not think this area meets the threshold to be a protected area especially when it is located so close to Riccarton Road public transport corridor. I think the walkable catchment distances from town centres should be increased because they are quite short at the moment and allowing more people to live close to these centres will be a good thing.</p>	Oppose
Jono de Wit/351.1	Kāinga Ora/ #FS2082.278	Seek Amendment	<p>Seek to remove or significantly reduce the size of Riccarton Bush Interface Qualifying Matter is removed completely or reduced in size significantly so it is only on the north side of Riccarton bush - furthest away from the public transport corridor and town centre of Riccarton Road. I generally support the changes to zoning and rules to allow people to build housing with higher density and more storeys on their land because it will allow the city to grow and house it's people without continually sprawling further and further out. It should result in more housing where people want to live for more affordable prices. It will allow more people to live closer to public transport, work and shops which will mean more people will be able to have a viable choice of taking public transport, walking or biking instead of adding to traffic jams. I do not support the Riccarton Bush interface qualifying matter because I do not believe it meets the strict requirements for a qualifying matter and it will have a large negative effect on the density which will be able to be built around the important Riccarton Road transport corridor and close to Riccarton central. It makes no sense to plan mass rapid transport down Riccarton road while at the same time severely limiting the amount of housing which can be built on the northern side of it in central Riccarton. I do not believe this QM is in the interest of the city or the people who may want to live close to Riccarton and the future MRT there. I do not support the sunlight QM because it will delay the MDRS and the tree financial contributions from taking effect and will likely result in a worse built form especially in the six storey zones due to the setbacks and recession planes required. I would support a sunlight QM if it had the same boundaries as the transport access QM so that it did not delay the MDRS in the most important areas and does not reduce the density able to be built in the six storey zones. The area north of Riccarton road and west of Straven Road should be HRZ not MRZ because limiting density near a main public transport route that is so close to Riccarton central and on a planned MRT route does not make sense. South Shore Resident's Association (SSRA) / #380.1		Seek Amendment	Clarify the interaction and relationship [between Qualifying Matter] coastal hazard areas [and] plan change 12.	
South Shore Resident's Association (SSRA) /380.5	K Hay/ #FS2013.1	Seek Amendment	[That] "development" and "intensification" [have] clear and robust definition/s. SSRA believe the definition of development and intensification needs to be clear and robust. We are concerned that without context to show clear intent, the meaning of intensification could be extrapolated over time to extend building an additional room on an existing house. (i.e., that this can be viewed as intensification). SSRA have observed in the past where original intent has been lost over time and new interpretation of rules have been applied.	Seek Amendment
South Shore Resident's Association (SSRA) /380.7	K Hay/ #FS2013.2	Seek Amendment	Clarif[y the interaction between the Residential Unit Overlay and the] Qualifying Matter Coastal Hazard Management Areas. In the Southshore area...currently have the RUO mechanism put in place by a previous IHP...[A]sk if this has been retained, including associated rules? If so, what happens if the Qualifying Mater Coastal Hazard Management Areas overlap with the RUO?	Oppose
South Shore Resident's Association (SSRA) / #380.9		Oppose	[Delete Qualifying Matter Tsunami Management Area]	
South Shore Resident's Association (SSRA) /380.9	Toka Tū Ake EQC ./ #FS2075.14	Oppose	<p>[Delete Qualifying Matter Tsunami Management Area] It is our view that the CCC is overreaching in its risk management of coastal areas in relation to tsunami planning restrictions. Tsunami risk is a rare and unlikely event and, if it occurs, large South American events have been shown to have ample warning timeframes. We question if other hazards such as fire risk or surface flooding (increased risk due to climate change), both of which have occurred, will be subjected to similar restrictions. We believe it is sufficient to provide residents with warning systems. Ensure that residents have appropriate routes to either vertically or horizontally evacuate, and let residents self-manage the risk. We don't believe it is appropriate to manage this through the District Plan.</p> <p>[Delete Qualifying Matter Tsunami Management Area] It is our view that the CCC is overreaching in its risk management of coastal areas in relation to tsunami planning restrictions. Luke Hansby/ #453.3		Oppose	Opposes Qualifying Matters as proposed.	
Toby Williamson/ #458.1		Seek Amendment	[S]eek[s] the qualifying matter for sunlight to be withdrawn.	
Toby Williamson/ #458.2		Seek Amendment	The low public transport qualifying matter to be withdrawn in full or in part.	
Toby Williamson/458.2	Rachel Sanders/ #FS2074.110	Seek Amendment	The low public transport qualifying matter to be withdrawn in full or in part. Christchurch must grow inwards and not outwards. Allowing for more infill density will lead to a more vibrant city that is more accessible and opens up opportunities for public transport and other means to lower our footprint. Low access to public transport as a qualifying matter in some areas of the city is a poor qualifying matter. Some areas are inner city or edge of inner city and have poor access. This is a result of lack of density, and poor transport planning. Transport accessibility should be improved, not used as a qualifying matter to keep these areas further behind in amenity. Examples Hoon hay and woolston.	Oppose

Adam Currie/523.2	Rachel Sanders/ #FS2098.62	Oppose	<p>[O]ppose the Low Public Transport Accessibility Area Qualifying Matter...seek[s] that the council drop this qualifying matter.</p> <p>I oppose the Low Public Transport Accessibility Area Qualifying Matter as I believe that the public transport layout and network will need changes to prepare and accommodate future growth. We should not define future growth in Christchurch based on these routes. This would also artificially limit future housing in our city. I seek that the council drop this qualifying matter.</p> <p>The council plans to restrict housing in some areas of the city because they are poorly serviced by the lack of current high frequency public transport routes. Some areas solely designated with this qualifying matter such as in Casebrook and Styx are close to rail corridors, existing commercial areas and are serviced by low frequency routes. In the future, these areas could see a boost in service by more buses on current routes or introduction of a commuter rail service.</p>	Seek Amendment

Bryce Harwood/ #662.3		Oppose	[O]ppose[s] the Sunlight Access Qualifying Matter... seek[s] that the council drop this qualifying matter.	

Williams Corporation Limited/ #663.4		Seek Amendment	Seek that the Low Public Transport Accessibility Qualifying Matter overlay is removed from 9 Patten Street.	
Lawrence & Denise May/ #665.3		Seek Amendment	That sunlight access be better protected by further amending the medium/high density southern boundary recession plane to 45° from 3m at the boundary	
Robyn Wells/ #675.1		Seek Amendment	The Qualifying Matter, to protect sunlight access for homes, does not go nearly far enough...[A]sk[s] the council to advocate for development in Christchurch to be based on not only the District Plan, which has been carefully developed over many years, but also our unique Christchurch blueprint developed with much consultation and input from experts after the earthquake.	
Jack Gibbons/ #676.10		Oppose	[In respect of the QM Low Public Transport Accessibility] - Remove the public transport QM.	
Jack Gibbons/ #676.12		Oppose	[In respect of the Airport Noise Influence Area, remove this as a QM]	
Jack Gibbons/676.12	Christchurch International Airport Limited/ #FS2052.63	Oppose	[In respect of the Airport Noise Influence Area, remove this as a QM] The airport noise contour thrusts deep into the city covering a considerable amount of urban land. Council is proposing to prevent all zone changes in this area, exempting it from the MDRS / NPS-UD. The area is already urbanized, with plenty of existing residents, and is otherwise indistinguishable from elsewhere in the suburbs. It also covers some areas that should be HRZ. Other councils in New Zealand handle airport noise in areas like this by mandating improved noise insulation in the construction of new buildings, leaving the zoning as it otherwise would be. There is no just explanation why the council has chosen to suppress all construction over this option	Oppose
Tony Dale/ #679.1		Seek Amendment	Support changes to building heights, recession planes and set-backs to preserve access to sunlight in medium density zones. However, the Qualifying Matter should be more conservative to preserve sunlight to the same degree as is enjoyed under our current density rules.	
Tony Dale/ #679.9		Seek Amendment	Submit that further densification in areas where flooding is frequent and serious (and there is no immediate plan to mitigate) should be prevented by making those areas a qualifying matter.	
Bernard and Janette Johnston and Dovey/ #680.3		Seek Amendment	Consider the existing infrastructure issues on the Hills and amend PC14 to include a new Infrastructure Qualifying Matter area on the Hills as appropriate, and make all consequential amendments necessary to give effect to this submission.	
Bernard and Janette Johnston and Dovey/ #680.4		Seek Amendment	Amend PC14 to add a new Qualifying Matter or amend the existing Sunlight Access Qualifying Matter to include the Residential Hills Zone as a Qualifying Matter area, and make all consequential amendments necessary to give effect to this submission. Alternatively, if that relief is not granted, amend PC14 to add a new Qualifying Matter or amend the existing Sunlight Access Qualifying Matter to include the base of the Hills/valleys as Qualifying Matter areas, and make all consequential amendments necessary to give effect to this submission.	
Andrew McCarthy/ #681.3		Oppose	Remove the Low Public Transport Access Qualifying Matter	
Andrew McCarthy/681.3	Rachel Sanders/ #FS2074.3	Oppose	Remove the Low Public Transport Access Qualifying Matter My main reason for opposing the LPTAQM is that it does not give effect to the intent of the RMAA and NPS UD, especially over most of the hill suburbs. [I]n choosing to zero in on Objective 3(b) Council has deliberately ignored 3(c) which states that district plans must enable more people to live in areas of high demand. The Council has not followed due process in establishing the LPTAQM [nor established the necessity or validity of the LPTAQM]. In establishing the LPTAQM, Council has effectively excluded over a third of the residential sites in the city from densification (22585 out of 66355 sites). This is an utterly enormous chunk of the city to be excluded and goes against the intention of the Act that every zone would have the MDRS incorporated. On the hill area of the city, the effects of the LPTAQM are even more marked, with 78%(!) of the lots excluded from densification by the LPTAQM (s6.32.6, s32 Report, Qualifying Matters –Part 3). The creation of the LPTAQM stems from a clear link in the Council's mind between intensification and high frequency public transport, i.e., you can't have intensification unless you have the latter. This linkage is spurious. Other Tier 1 Councils do not seem to have seen fit to create a similar linkage, notably not CCC's local peers at WDC and SDC.	Oppose

Proxy use of PC14 to enact parts of PC12. [Clarify] [a]lignment of PC14 Qualifying matters and objectives of PC12. The North Beach Residents Association (NBRA) submits our feedback on PC14, with particular reference to the “Qualifying matters”. Our concern is primarily with the qualifying matters: <ul style="list-style-type: none"> Coastal Hazard areas 	Support

- Tsunami Management area.

We support in its entirety, the submission of the Southshore Residents Association that goes into

greater technical detail, all of which we agree with.

The NBRA has advocated on behalf of our community on several topics on several occasions. A common outcome that follows our submissions, is the negative attitude to Coastal areas that we have had to endure for decades. For some reason we are perceived as a “doomed area” when in fact predicted sea level rise would see more of the City inundated than coastal areas. Recent flooding has been far more severe in the city than on the coast. We want to ensure that proposed PC14 Qualifying matters, particularly those listed above, do not serve to control intensification in coastal areas, do not stop reasonable development or serve to stagnate our community (as Council attitude to coastal areas has done for decades).

Coastal Hazard areas:

Point 1. of the SSRA submission is particularly poignant:

“concerned that the Council may use PC14 as a vehicle to replace the current District Plan provisions for Coastal areas.. We are concerned that CCC may use the qualifying matters in PC14 as an effective proxy for Plan Change 12 in the sense that it could incorporate many of the provisions (mapping, objectives;and policies and rules) intended to be included in PC12”.

Of some disturbing note is the fact the PC14 process has no appeal on merits and therefore no opportunity to remedy or pursue change through the Environment Court.

Coastal hazard Planning in CCC is predicated on the continued use of RPC 8.5 and 8.5H+. Internationally the use of this scenario is now accepted to be highly unlikely and requires the worst level of every variable to occur simultaneously yet our planning is still based on this now unlikely scenario. Whilst we acknowledge there is a need to address climate change, a more reasoned, conservative and practical pathway should be considered.

Council’s continued reluctance to incorporate science they commissioned from NIWA on;Coastal sand budget and its impact on our coastline also beggars belief. (links below) This report indicates, that at even an RPC 8.5 scenario there is a very significant time lag (up to 100 years) before any erosion may occur. Using PC14 qualifying matters and continued use of RPC8.5 with relation to Coastal Hazards planning on our New Brighton Coastline may stifle Community development in areas that are unlikely to be affected for a very long time.

<https://www.ccc.govt.nz/assets/Documents/Environment/Land/Coastal-Hazards/LDRP113-Coastal-Sand-Budget-for-Southern-Stage-A-NIWA-Client-Report-Final-April-2018-Murray-Hicks.pdf>

<https://www.ccc.govt.nz/assets/Documents/Environment/Land/Coastal-Hazards/LDRP113-Coastal-Sand-Budget-for-Southern-Pegasus-Bay-Stage-B-Future-Sand-Budget-Final-June-2018-Murray-Hicks-NIWA.pdf>

Tsunami Management Areas.

We are concerned re the emphasis on Tsunami and accompanying mapping. The occurrence of Tsunami waves generated as a result of South American earthquake is a rare and unlikely event. We have been subjected to a number of Tsunami warnings from South American events and on our City coastline there has not been any effect. Our primary concern is that Tsunami mapping should focus on the Banks Peninsula inlets and the Avon-Heathcote Estuary where Tsunami waves are more likely to travel up those rivers.

potentially the largest source of earthquake and tsunami

hazard in New Zealand.

We request Tsunami mapping to be reviewed as currently the mapping is inappropriate for a District Plan.

Summary:

Our primary concerns are mirrored in the SSRA summary:

			<ol style="list-style-type: none"> 1. Clarify Plan Change 14 Qualifying matters;Coastal hazard areas and the interaction and relationship to PC12. Proxy use of PC14 to enact parts of PC12. Alignment of PC14 Qualifying matters and objectives of PC12. 2. Reservations about the continued use of RPC 8.5 and 8.5+ to inform planning maps, given the now internationally recognised unlikely status. 3. Tsunami mapping. Clarify the basis/methodology of mapping. Is it appropriate for a District Plan?

- Coastal Hazard areas
- Tsunami Management area.

We support in its entirety, the submission of the Southshore Residents Association that goes into greater technical detail, all of which we agree with.

The NBRA has advocated on behalf of our community on several topics on several occasions. A common outcome that follows our submissions, is the negative attitude to Coastal areas that we have had to endure for decades. For some reason we are perceived as a “doomed area” when in fact predicted sea level rise would see more of the City inundated than coastal areas. Recent flooding has been far more severe in the city than on the coast. We want to ensure that proposed PC14 Qualifying matters, particularly those listed above, do not serve to control intensification in coastal areas , do not stop reasonable development or serve to stagnate our community (as Council attitude to coastal areas has done for decades).

Coastal Hazard areas:

Point 1. of the SSRA submission is particularly poignant:

“concerned that the Council may use PC14 as a vehicle to replace the current District Plan provisions for Coastal areas.. We are concerned that CCC may use the qualifying matters in PC14 as an effective proxy for Plan Change 12 in the sense that it could incorporate many of the provisions (mapping, objectives;and policies and rules) intended to be included in PC12”.

Of some disturbing note is the fact the PC14 process has no appeal on merits and therefore no opportunity to remedy or pursue change through the Environment Court.

Coastal hazard Planning in CCC is predicated on the continued use of RPC 8.5 and 8.5H+. Internationally the use of this scenario is now accepted to be highly unlikely and requires the worst level of every variable to occur simultaneously yet our planning is still based on this now unlikely scenario. Whilst we acknowledge there is a need to address climate change, a more reasoned, conservative and practical pathway should be considered.

Council’s continued reluctance to incorporate science they commissioned from NIWA on;Coastal sand budget and its impact on our coastline also beggars belief. (links below) This report indicates, that at even an RPC 8.5 scenario there is a very significant time lag (up to 100 years) before any erosion may occur. Using PC14 qualifying matters and continued use of RPC8.5 with relation to Coastal Hazards planning on our New Brighton Coastline may stifle Community development in areas that are unlikely to be affected for a very long time.

<https://www.ccc.govt.nz/assets/Documents/Environment/Land/Coastal-Hazards/LDRP113-Coastal-Sand-Budget-for-Southern-Pegasus-Bay-Stage-B-Future-Sand-Budget-Final-June-2018-Murray-Hicks-NIWA.pdf>

Tsunami Management Areas.

We are concerned re the emphasis on Tsunami and accompanying mapping. The occurrence of Tsunami waves generated as a result of South American earthquake is a rare and unlikely event. We have been subjected to a number of Tsunami warnings from South American events and on our City coastline there has not been any effect. Our primary concern is that Tsunami mapping should focus on the Banks Peninsula inlets and the Avon-Heathcote Estuary where Tsunami waves are more likely to travel up those rivers.

potentially the largest source of earthquake and tsunami

hazard in New Zealand.

We request Tsunami mapping to be reviewed as currently the mapping is inappropriate for a District Plan.

Summary:

			<p>Our primary concerns are mirrored in the SSRA summary:</p> <ol style="list-style-type: none"> 1. Clarify Plan Change 14 Qualifying matters; Coastal hazard areas and the interaction and relationship to PC12. Proxy use of PC14 to enact parts of PC12. Alignment of PC14 Qualifying matters and objectives of PC12. 2. Reservations about the continued use of RPC 8.5 and 8.5+ to inform planning maps, given the now internationally recognised unlikely status. 3. Tsunami mapping. Clarify the basis/methodology of mapping. Is it appropriate for a District Plan? 	
Matthew Gibbons/ #743.1		Seek Amendment	[T]he low public transport accessibility area should go.	
Matthew Gibbons/743.1	Rachel Sanders/ #FS2074.113	Seek Amendment	<p>[T]he low public transport accessibility area should go.</p> <p>Removal of recessional planes and setbacks is good. Density around the central city is desirable. However, density should be permitted everywhere. Higher density will improve amenities like shopping and public transport. Demand creates its own supply. Hence the low public transport accessibility area should go. Higher density near the airport should be allowed - people can install sound proofing. Perimeter block housing should be easier. Setbacks are not desirable. Hence 14.6.2.2.b should be removed. So should 14.6.2.2.c. iv A and B. No new heritage areas should be allowed as they restrict development in parts of Christchurch where people want to live. A good rule would be that for every house added to a heritage area another is removed.</p> <p>The rules need to be changed to permit greater density in a wide range of places. Making it easier to build new houses will improve affordability and result in a more compact city that is cheaper to service and with lower transport times. It will also make active commuting easier and save on roads.</p>	Oppose

Waihoru Spreydon-Cashmere-Heathcote Community Board /804.6	Chapman Tripp/ #FS2064.95	Seek Amendment	[Regarding the Low Public Transport Accessibility Qualifying Matter, seeks that] the bus frequency shifted from 15 minutes to 30 minutes. The Board	Oppose

			would however like to see the bus frequency shifted from 15 minutes to 30 minutes, because changes to increase bus frequency are relatively easily made, and to some degree this may incentivise provision of more frequent service.	
Waihoru Spreydon-Cashmere-Heathcote Community Board / #804.7		Seek Amendment	[C]oncerned that infrastructure is suitable for increased density, and support the public transport accessibility restriction, especially across the Port Hills.	
Waihoru Spreydon-Cashmere-Heathcote Community Board / #804.8		Support	[S]upports the need to include high-risk natural hazards as Qualifying Matters. Coastal inundation, coastal erosion and tsunami hazards are all of concern to at least some of the community in Waihoru Spreydon-Cashmere-Heathcote.	
Waka Kotahi (NZ Transport Agency) / #805.4		Oppose	[O]pposes the current approach in relation to including Residential Character Areas as a qualifying matter. The submitter requests to undertake further assessment to weigh the benefits of character protection against the wider opportunity costs of development limitations in key areas. Based on the results of this study, reduce the extent of residential character controls.	
Waka Kotahi (NZ Transport Agency) /805.4	Sulekha Korgaonkar/ #FS2019.1	Oppose	[O]pposes the current approach in relation to including Residential Character Areas as a qualifying matter. The submitter requests to undertake further assessment to weigh the benefits of character protection against the wider opportunity costs of development limitations in key areas. Based on the results of this study, reduce the extent of residential character controls. The proposed plan change has included an overlay for Residential Character Areas, of which some of these are in areas that are in close proximity to the city centre or other large centre zones with high density zoning or are nearby to key public transport corridors (Riccarton and Papanui Roads). Waka Kotahi considers that PC14 has not appropriately assessed the benefits of increased density with reduced greenhouse gas emissions and vehicle kilometres travelled against amenity values of the Residential Character Areas, especially in areas that are zoned for high density and located in close proximity to alternate modes of transport. Growth should be enabled in areas of Christchurch where they are the most accessible by active and public transport and which best support a well-functioning urban environment. The Residential Character areas also do not recognise or meet objective 4 and policy 6 of the NPS-UD. Waka Kotahi opposes the current widespread approach and associated controls of the Residential Character qualifying matter, as it prevents density in areas where the national direction requires it. Waka Kotahi requests that the areas are both reduced in extent and that the provisions are revised to allow greater levels of development, but the appropriate method may involve a mix of the two approaches	Oppose
Waka Kotahi (NZ Transport Agency) / #805.5		Oppose	[O]pposes the current approach in relation to including Residential Character Areas as a qualifying matter. The submitter seeks that residential character is provided for by instituting design controls in the overlays which allow for special/residential character to be considered and incorporated in design while enabling levels of development anticipated by the zones.	
Waka Kotahi (NZ Transport Agency) / #805.17		Oppose	Delete the Low Public Transport Accessibility Area overlay in the planning maps and reference to this qualifying matter in Chapter 14.	
Waka Kotahi (NZ Transport Agency) /805.17	Ivan Thomson/ #FS2047.2	Oppose	Delete the Low Public Transport Accessibility Area overlay in the planning maps and reference to this qualifying matter in Chapter 14. Accessibility Area qualifying matter does not achieve the intended outcomes sought by MDRS. The approach doesn't take into account alternative transport options and doesn't consider where job opportunities, education and amenities are located. It also takes a static approach to a system that is dependent on funding to operate these services and has the potential to change overtime as demand changes, where increased density can support increased public transport services. It is also considered that this qualifying matter does not meet the requirements under s771 of the NPS-UD. Waka Kotahi opposes the use of the Low Public Transport Accessibility Area as a qualifying matter and requests that this be deleted.	Oppose

Historic Places Canterbury/ #835.16		Support	The submitter supports sunlight access being a qualifying matter in respect of the medium density and high density zones.	
Historic Places Canterbury/835.16	Anne Dingwall/ #FS2037.603	Support	The submitter supports sunlight access being a qualifying matter in respect of the medium density and high density zones. The submitter supports making sunlight access a qualifying matter so that recession planes can be adjusted to allow Christchurch developments under the MDRS to have the same amount of sunlight access as Auckland developments. Furthermore, we would argue that a similar amount of sunlight access to Auckland represents a bare minimum of what is acceptable because, with the lower temperatures experienced in Christchurch over winter, maximising sun access is a desirable objective not only to mitigate the need for greater energy use associated with heating but also to enhance health and well-being.	Support

Philippa Rutledge/ #875.1		Support	The Sunlight Access recession planes be designed to ensure Christchurch residents living in climate zone 5, during the winter months receive equivalent solar energy to those living in climate zone 1.	
Philippa Rutledge/ #875.2		Seek Amendment	In [the Medium Density Residential Zone] qualifying matters – include stormwater infrastructure that has not been upgraded within the last 20 years. The plan change is subject to Part 2 in the usual way, and as such the health and well-being of people in s5 should not be diminished as a result of stormwater discharges.	
Philippa Rutledge/875.2	Kāinga Ora/ #FS2082.801	Seek Amendment	<p>In [the Medium Density Residential Zone] qualifying matters – include stormwater infrastructure that has not been upgraded within the last 20 years. The plan change is subject to Part 2 in the usual way, and as such the health and well-being of people in s5 should not be diminished as a result of stormwater discharges. Stormwater Infrastructure – the Consultation document acknowledges the limitation on growth imposed by old infrastructure -including stormwater. Existing rainfall is increasing in intensity making stormwater management more vital than ever. The post-quake rebuild has resulted in considerable intensification of housing in existing city residential neighbourhoods. Large sections have been subdivided and smaller sections have had rebuilds which cover much more of the section. In both cases permeable gardens and vegetation have disappeared to be replaced by larger structures and impermeable patios, driveways. This results in much higher stormwater runoff. To the streets and then streams, creeks. Unlike the new areas that have been developed there has been no upgrade of the older stormwater infrastructure in areas like mine to cope. Further streams which are used to discharge stormwater into - such as the Wairarapa - had their beds raised by liquefaction reducing their capacity to absorb stormwater flows. Resulting in the gutters overflowing quickly, and the stream rising fast. On 11 May 2023 18mm fell in the city over an 8 hour period. This is not intense nor prolonged rainfall. Nevertheless the Wairarapa Stream was at the top of the lowest bank by 10 am and there was numerous street flooding from overflowing street culverts in many parts of the city. In some places over half the road. If the existing stormwater drains have a designation under 77I(g) - this would assist the Council to give effect to the designation by ensuring adequate capacity and maintenance for houses connecting to the SW drain. It is also a 77I(a) [s6(a) matter] - natural character of water includes water quality and quantity, and stormwater discharges carry contaminants and alter natural flow. Intensified development which results in increased stormwater discharge in areas of the MRZ where the stormwater infrastructure has not been upgraded within the last 20 years should be a qualifying matter. The NPS-UD 3.5 requires that local authorities must be satisfied that infrastructure to service the development is available. Where this infrastructure is over 20 years old this is clearly not the case. Climate change will make the adequacy of stormwater infrastructure even more important.</p>	Oppose
Otautahi Community Housing Trust/ #877.4		Seek Amendment	Amend the provisions to remove / delete the mapped Hazard Management Areas from within the District Plan. Instead, these natural hazard overlays should be based on non-statutory map layers in the City Council's Interactive Viewer that sits outside the District Plan. Not included in the Proposed Plan and Variation.

			<p>6.1A Qualifying matters</p> <p>Table 1 - Qualifying Matters - Provisions that may reduce the level of enablement of Medium Density Residential Standards and/or intensification enabled under Policy 3.</p> <p>OCHT also has concerns that the proposed policy approach is too conservative, noting that Policy 24 of the NZCPS requires identification of areas in the coastal environment that are potentially affected by coastal hazards (including tsunamis) over at least 100 years. Similarly, Policy 25 of the NZCPS directs that councils avoid increasing the risk of social, environmental, and economic harm from coastal hazards, in areas potentially affected by coastal hazards over at least the next 100 years. The conservative nature of the policy approach has implications for both the geographic extent of the hazard overlays and Qualifying Matters, and the costs and benefits of the proposed regulation and associated significant limitations on redevelopment potential of large areas of existing commercial and residential building stock.</p> <p>OCHT also considers that the Council's intent to retain Residential Suburban / Residential Suburban Density Transition zoning in the Tsunami Management Area is disproportionate based on the modelled return period. This may be appropriate for 1:100 or 1:200, especially if such areas are also covered by high flood and/or coastal inundation risk overlays.</p> <p>This also appears to be a disconnect between arms of council actively promoting residential intensification on Council owned land in New Brighton, suggesting the absence of a coherent approach to place-making and rules that will significantly limit regeneration in areas that are in need of rebuilding.</p> <p>[Please see attachment]</p>

Troy Lange/ #884.5		Oppose	Delete the LPTA QM, in particular as it applies to areas in north west Christchurch	
Troy Lange/884.5	Equus Trust/ #FS2107.2	Oppose	<p>Delete the LPTA QM, in particular as it applies to areas in north west Christchurch</p> <p>A further QM relates to areas with low public transport accessibility where the Residential Suburban Zone, Residential Banks Peninsula and Residential Hills Zone and their current standards in the District Plan continue to apply. This limits the application of the Medium Density Residential Zone (and the MDRS standards) to residential areas with the following spatial characteristics:</p> <ul style="list-style-type: none"> • Residential areas within 800m walk from five High Frequency (Core) Routes • • Residential areas within 800m walk from additional bus routes with significant potential to connect employment centres together • Residential areas more than 200m from High Density Residential Zones and the application of Policy 3 in relation to centres, snapping to the nearest city block • Areas zoned Residential Suburban Density Transition Zone, Residential New Neighbourhoods (RNNZ) and Residential Medium Density2 <p>Based on the PPC14 planning maps, parts of the operative NNZ have been rezoned Future Urban Zone. The MDRS do not apply to the FUZ which retains the operative NNZ standards. These require a minimum net residential density of 15 hh/ha, and minimum lot size 300m2 , except that up to 20% can be between 180-299m2 in area. The justification for the Low Public Transport Accessibility Qualifying Matter (LPTA QM) is summarized as below:</p> <p>This qualifying matter will provide for a level of intensification within the qualifying matter area consistent with the level of existing and likely future accessibility to employment, education and community services in these areas and promote an integrated and more efficient and effective approach to the provision of public transport and three waters network infrastructure focussed on areas most suited to enable intensification close to centres and areas with relatively strong demand. It will support well-functioning urban environments reductions in greenhouse gas emissions and support resilience to climate change effects without significantly impacting on housing affordability and competitive land and development markets.</p> <p>It aligns the location of medium density development with existing and committed structural investments and cross organisational planning for the provision of public transport in Greater Christchurch, including as set out in the Greater Christchurch Public Transport Combined Business Case 2020 (the PT Combined Business Case). 4 Enabling urban including residential development of land within the 50-55 dBA Ldn airport noise contour will provide increased opportunity (additional local population and potential patronage) for improved PT between the central city and the CIAL, a major economic hub.</p>	Support
Troy Lange/ #884.6		Seek Amendment	Amend the Airport Noise Qualifying Matter to only apply to areas within the 55 dBA Ldn CIAL airport noise contour.	
Troy Lange/884.6	Christchurch International Airport Limited/ #FS2052.91	Seek Amendment	Amend the Airport Noise Qualifying Matter to only apply to areas within the 55 dBA Ldn CIAL airport noise contour. Applying this QM based on the 50 rather than the 55 dBA Ldn airport noise contour is unnecessarily conservative and out of step with the relevant NZ noise standards (NZS 6802) and international best practice which applies the 55 dBA Ldn noise contour. It results in development restrictions which are not justified on reverse sensitivity grounds.	Oppose

Helen Broughton/ #886.1		Seek Amendment	Supports the Riccarton Bush Interface Area as a qualifying matter, but considers a greater area should be included.	
Helen Broughton/886.1	Christchurch International Airport Limited/ #FS2052.271	Seek Amendment	<p>Supports the Riccarton Bush Interface Area as a qualifying matter, but considers a greater area should be included.</p> <p>I support Riccarton House and Bush being a qualifying matter, but consider a greater area needs to be included for the following reasons:.</p> <p>1 The WSP report commissioned by the Council mapped out a larger area. The south side of Rata street between Rata and Rimu Street was included as was Kahu Road opposite the entrance to Riccarton House. It was a council planning decision to make this area medium density with a height limit of two storeys. This is a compromise, but I advocate strongly that this area remain suburban density. There is no clear reason to set aside the WSP mapping.</p> <p>2 Recognition needs to be given to the Kauri Cluster which could be included within the qualifying matter of Riccarton House and Bush. In 2007/2008 the area was turned into a precinct by narrowing of carriageway, grassberms widened, street thresholds introduced or upgraded, native trees planted in accordance with the street names- Rata trees for Rata Street, Rimu trees for Rimu street etc</p> <p>3 Medium density will mean that there will only be a 1.5 metre separation between the fence line and a house -taking away the current front gardens and the likely removal of roadside reserve trees as the developer has the ability to determine where a driveway is placed. If roadside reserve trees need to come down, Council cannot stop their removal but can insist on replacement trees- usually young saplings.</p> <p>4 Riccarton House and Bush/ Putaringamotu is a unique NZ heritage site that we have probably taken for granted. Riccarton Bush is of national significance and Riccarton House and Cottage are defined as Highly Significant. Maori were in the area before the arrival of the Deans family. The appropriate surrounding environment for such a significant heritage site is suburban density. WSP have provided drawings of medium density and high density zoning which demonstrate how the environs and this significant heritage site could be undermined. The significance of this site will only increase in future years and it is imperative Council does not impose higher buildings around this site.</p> <p>5 There is a larger area around Riccarton House and Bush that the Riccarton Bush /Kilmarnock Residents' Association requests retain suburban density. I fully support this submission</p>	Support

Waipuna Halswell-Hornby-Riccarton Community Board/#902.7		Seek Amendment	[That the threshold for qualifyingmatters be lowered to enable] recognition of a range of other matters that render areas of the city unsuitable for the typeof intensification proposed. These matters include land stability and the height of the watertable in some areas, as well as the capacity of infrastructure such as roading to cope withadditional development.	
Waipuna Halswell-Hornby-Riccarton Community Board/902.7	Kāinga Ora/#FS2082.1269	Seek Amendment	<p>[That the threshold for qualifyingmatters be lowered to enable] recognition of a range of other matters that render areas of the city unsuitable for the typeof intensification proposed. These matters include land stability and the height of the watertable in some areas, as well as the capacity of infrastructure such as roading to cope withadditional development.</p> <p>The Board notes that strong evidence is requiredfor something to be a Qualifying Matter and considers that the threshold for qualifyingmatters is too high with the criteria including: matters of national importance, nationallysignificant infrastructure, heritage and public open space and ‘other matters’, requiring significant evidence, including site-by-site evaluation and full consideration of what housingor business capacity is likely to be lost by stopping or limiting more homes from being builtand an options analysis for how higher densities can still be achieved.</p> <p>The Board supports the Qualifying matters proposed in the Plan but does not consider thatthe categories are sufficient to represent many areas of the city that ought to be exemptfrom the intensification proposals in the Plan. The Board considers that there needs to berecognition of a range of other matters that render areas of the city unsuitable for the typeof intensification proposed. These matters include land stability and the height of the watertable in some areas, as well as the capacity of infrastructure such as roading to cope withadditional development particularly in areas of already rapid growth. In Halswell there isevidence that roads are already struggling to cope with the traffic generated by the growth.The Board notes that the removal of the requirement for developments to provide on-siteparking is already causing parking and traffic issues. There are vehicles having to be parkedon pavements and illegally in suburban streets; this is likely to become much more severewith the proposed allowable intensification.</p>	Oppose
Waipuna Halswell-Hornby-Riccarton Community Board/#902.20		Seek Amendment	[That] an additional “qualifying matter” [is] introduced [requiring] significant distance between Town Centres.	
Waipuna Halswell-Hornby-Riccarton Community Board/902.20	Kāinga Ora/#FS2082.1282	Seek Amendment	<p>[That] an additional “qualifying matter” [is] introduced [requiring] significant distance between Town Centres.</p> <p>The Board believes high- density residential development in areas such as Riccarton andHornby will detract from intensification in the Central City and Council's aim for a vibrantcentral city. High rise developments in Riccarton, Hornby, Papanui willundermine this objective. It is critical that the central city is considered a priority.</p> <p>Riccarton is particularly affected, having two Commercial Centres close together- Westfieldand Bush Inn Centre. It is very unusual to have a large Town Centre close to the Central City -added to this is the fact the Bush Inn Centre is very close to Westfield. In fact, if theintensification was to go ahead as planned much of Riccarton would be zoned for up to sixstories. The Board doubts that this was intended or foreseen by the parliamentarians passingthe legislation. To avoid this situation an additional “qualifying matter” could be introducedthat there needs to be significant distance between Town Centres.The Board will access technical evidence before the hearing.</p>	Oppose
Waipuna Halswell-Hornby-Riccarton Community Board/#902.25		Support	[RetainResidential Industrial Interface Qualifying Matter]: [That] there is a strongconstraint on residential height and a wide buffer provided between residentialareas and any industrial development.	
Waipuna Halswell-Hornby-Riccarton Community Board/902.25	Kāinga Ora/#FS2082.1287	Support	[RetainResidential Industrial Interface Qualifying Matter]: [That] there is a strongconstraint on residential height and a wide buffer provided between residentialareas and any industrial development. Therehave been difficulties in the past between Ravensdown and local residentsregarding the company’s activities including discharges, traffic movements andnoise. The Board is aware that Ravensdown will be making its ownsubmission on the plan and fully supports its request. The Board suggests thereis a strong constraint on residential height and a wide buffer provided betweenresidential areas and any industrial development. There may be other housingareas close to Industrial plants where there should also be a constraint onresidential height and a wide buffer provided.	Oppose

Christian Jordan/ #1086.3		Seek Amendment	Seeks new qualifying matter requiring an assessment of the heritage value for any pre 1940 building intended for demolition.	
Christian Jordan/1086.3	Kainga Ora - Homes and Communities/ #FS2099.6	Seek Amendment	<p>Seeks new qualifying matter requiring an assessment of the heritage value for any pre 1940 building intended for demolition.</p> <p>The qualifying matter should require options for retention and reuse of any pre 1940 building (either in situ or via relocation within the site or immediate local area) to be considered prior to granting demolition consent. Consent for demolition should only be granted if the building does not contribute to the character of the area. This should apply across the entire city and not just in Heritage areas.</p> <p>Heritage tells the story of our past. It is also a gift from past generations to our future. Memories of place are important for a sense of belonging and community. Actively discouraging developers who do not value heritage buildings by requiring them to do additional assessment before demolition consent is granted (irrespective of a buildings heritage status), will create opportunities for other buyers to develop and restore these buildings in a way that respects their heritage values. Often it is only a marginal decision whether a building can be saved or demolished and encouraging development of later (and now often dilapidated) 'tract' or 'housing company' 1950s and 60s homes sitting on large sites but still within close proximity of suburban centres is a better outcome for the city.</p> <p>High quality houses with heritage value often sit on slightly larger sections which in a rapidly rising market through late 2020 to early 2022, led to decisions to demolish being made purely on the economics at that moment in time, rather than on the long view of the intrinsic value that a heritage building may have.</p>	Oppose

			<p>As these are irreversible losses, and the value of workmanship on these buildings generally well exceeds the current market value of the improvements, real care is needed to ensure potential value for future generations is not being discarded on the basis artificial economics. Artificially constraining zonings outside areas of pre 1940 homes while liberalising zoning in areas containing significant numbers of pre 1940 homes, creates artificial economic rationale for heritage demolition.</p> <p>The solutions for the city should also be read in context of my submission on PC14.</p>	
Christian Jordan/1086.3	Kainga Ora - Homes and Communities/ #FS2099.7	Seek Amendment	<p>Seeks new qualifying matter requiring an assessment of the heritage value for any pre 1940 building intended for demolition.</p> <p>The qualifying matter should require options for retention and reuse of any pre 1940 building (either in situ or via relocation within the site or immediate local area) to be considered prior to granting demolition consent. Consent for demolition should only be granted if the building does not contribute to the character of the area. This should apply across the entire city and not just in Heritage areas.</p> <p>Heritage tells the story of our past. It is also a gift from past generations to our future. Memories of place are important for a sense of belonging and community. Actively discouraging developers who do not value heritage buildings by requiring them to do additional assessment before demolition consent is granted (irrespective of a buildings heritage status), will create opportunities for other buyers to develop and restore these buildings in a way that respects their heritage values.</p> <p>Often it is only a marginal decision whether a building can be saved or demolished and encouraging development of later (and now often dilapidated) 'tract' or 'housing company' 1950s and 60s homes sitting on large sites but still within close proximity of suburban centres is a better outcome for the city.</p> <p>High quality houses with heritage value often sit on slightly larger sections which in a rapidly rising market through late 2020 to early 2022, led to decisions to demolish being made purely on the economics at that moment in time, rather than on the long view of the intrinsic value that a heritage building may have.</p> <p>As these are irreversible losses, and the value of workmanship on these buildings generally well exceeds the current market value of the improvements, real care is needed to ensure potential value for future generations is not being discarded on the basis artificial economics. Jim and Janeen Nolan/ #2079.3		Oppose	Opposes application of qualifying matter for walking distances to public transport being the measures of as to whether the area is RS or MDRS.	
Jim and Janeen Nolan/2079.3	Brighton Observatory of Environment and Economics/ #FS2092.29	Oppose	Opposes application of qualifying matter for walking distances to public transport being the measures of as to whether the area is RS or MDRS. As per plan 14 there are vast areas of so called walkable distance to public transport however the very vast majority of these citizens are not and will not be catching a bus.	Support
Elliot Sinclair / #2108.4		Seek Amendment	Seeks amendment to provisions of the Residential Hills zone and cultural significance Qualifying Matter to allow for more variety in housing type, if not increased density.	
Elliot Sinclair /2108.4	Rachel Sanders/ #FS2110.3	Seek Amendment	Seeks amendment to provisions of the Residential Hills zone and cultural significance Qualifying Matter to allow for more variety in housing type, if not increased density. The submitter supports the zoning proposed under PC14 for 22 Red Rock Lane which to be Residential Hills ("RH") however, requests amendment of the RH zone to incorporate amended rules that would provide for some additional housing by inserting "Multi-unit" provisions into the RH zone, consistent with how they are applied elsewhere in the District. This would enable additional housing that is subject to a simpler resource consent process than would be currently provided for, that matches the appropriate built form standards and existing character of the RH zone. This is on the basis that intensification (additional housing) could be appropriate where a landowner is able to satisfactorily address the cultural significance qualifying	Oppose

			matter overlay. The submitter understands the cultural significance qualifying matter overlay will replicate and adopts the existing district plan provisions for the existing Ngā Tūranga Tūpuna. This is shown in Figure 2. This currently relates to earthwork activities on the Port Hills, which allow cultural input into the resource consent applications where earthworks are proposed. The site is not in an existing silent file area.

Kelvin Lynn/ #45.4		Seek Amendment	To deal with this [tree canopy loss and climate crisis] we need more rather than fewer trees. Consideration needs to be given to the provision of pocket parks in the HDR areas.	
Kelvin Lynn/45.4	Anne Dingwall/ #FS2037.74	Seek Amendment	To deal with this [tree canopy loss and climate crisis] we need more rather than fewer trees. Consideration needs to be given to the provision of pocket parks in the HDR areas. The proposals for HDR areas will mean that there will be a substantial loss of tree canopy. Trees make places pleasant to live in, cool environments and sequester carbon. The CCC has declared a Climate Crisis. To deal with this we need more rather than fewer trees. Has there been consideration of the provision of pocket parks in the HDR areas?	Support
Ian Tinkler/ #117.4		Support	Clarify how often developers remove existing trees and then apply for new buildings. Clarify methods to ensure that the canopy is maintained after the development of the dwelling. Clarify how will Christchurch residents be assured that the canopy is being grown to offset the lack of canopy by developers?	
Ian Tinkler/117.4	Anne Dingwall/ #FS2037.199	Support	Clarify how often developers remove existing trees and then apply for new buildings. Clarify methods to ensure that the canopy is maintained after the development of the dwelling. Clarify how will Christchurch residents be assured that the canopy is being grown to offset the lack of canopy by developers? The requirement for minimum canopy cover is good, however some matters need to be considered further.	Support
Te Mana Ora/Community and Public Health/ #145.15		Support	Te Mana Ora supports the different proposals to support tree cover in the Housing and Business Choice Plan Change Consultation Document, including to update tree setbacks to better protect individual trees and to incentivise more tree planting, Financial Contributions, and the Schedule of Significant and Other Trees becoming a Qualifying matter.	
Josiah Beach/ #180.6		Support	[F]ully support[s] the proposed tree canopy requirement mechanism	
Josiah Beach/180.6	Anne Dingwall/ #FS2037.234	Support	[F]ully support[s] the proposed tree canopy requirement mechanism I appreciate that the Council is doing everything within its power to limit the storey limits and housing density increases, given the stringent legislation from central government.	Support

			<p>I fully and completely support all the Qualifying Matters proposed by the Council, and am grateful for the proactive and well-considered issues that they deal with.</p> <p>I fully support the proposed tree canopy requirement mechanism.</p>	
Riccarton Bush - Kilmarnock Residents' Association/ #188.20		Seek Amendment	<p>1. [Stronger] Protections for trees, and incentives for planting more trees, should be part of the changes proposed in PC14.</p> <p>2. Any financial contributions made to compensate for tree removal should be required to be spent in the area where trees are removed to, at least, replace what was there with equivalent planting.</p>	
Riccarton Bush - Kilmarnock Residents' Association/188.20	Anne Dingwall/ #FS2037.257	Seek Amendment	<p>1. [Stronger] Protections for trees, and incentives for planting more trees, should be part of the changes proposed in PC14.</p> <p>2. Any financial contributions made to compensate for tree removal should be required to be spent in the area where trees are removed to, at least, replace what was there with equivalent planting.</p> <p>We support stronger measures to increase tree canopy cover in Christchurch. There is no dispute about the critical environmental and social benefits of retaining and growing canopy cover particularly in Christchurch which has the lowest of any major metropolitan area in the country.</p> <p>However, we note no provision is made in PC14 to prevent trees (other than those few classified by the city council as notable) being removed, regardless of their size, age, or significance to our local community. We support many other submitters who argue for a plan change that better supports a rapid and significant increase in tree canopy cover across all of Christchurch, not just in parks and reserves.</p> <p>The city council proposes imposing levies on developers, who choose to fell trees in urban areas, to compensate for their loss and to fund additional planting elsewhere. The measures are, we submit, inadequate and insufficient disincentive because of the significant profits that flow from creating extra space for buildings, concrete and asphalt. Replacing mature trees with saplings, many of which do not survive, is not adequate compensation nor does it, in the short to medium term, provide shade or reduce heat-island effects in urban areas.</p> <p>What is more, there appears to be no requirement for the financial contributions to be spent in the area where the damage is done. Contributions made to compensate for felling trees in Riccarton might end up being used to fund plantings in a completely different location.</p>	Support

Support
Scentre (New Zealand) Limited/ #260.5		Oppose	[Regarding the insertion of a new Sub-chapter 6.10A] Oppose the imposition of additional financial contributions for the development of commercial zone land in greenfield/brownfield locations resulting in one or more buildings and / or impervious surfaces that do not retain or plant 10 percent tree canopy cover. This provision should be removed.	
Scentre (New Zealand) Limited/260.5	Anne Dingwall/ #FS2037.354	Oppose	[Regarding the insertion of a new Sub-chapter 6.10A] Oppose the imposition of additional financial contributions for the development of commercial zone land in greenfield/brownfield locations resulting in one or more buildings and / or impervious surfaces that do not retain or plant 10 percent tree canopy cover. This provision should be removed. Scentre opposes the imposition of additional financial contributions as proposed by the Council. Scentre considers that requiring financial contributions in this manner operates as a further barrier to development, which is in stark contrast to the intensification-enabling provisions of the NPS-UD and the Housing Supply Act. To promote intensification while making provision for increased canopy coverage in developments, Scentre considers alternative provisions should be implemented which provide incentives for compliance, rather than penalties resulting from non-compliance. This will achieve the intended effects of incentivising canopy coverage, while limiting barriers to further development. If retained, Scentre also considers that the provisions should be broadened to account for canopy coverage that is achieved by different forms of planting, and not just solely reliant on tree coverage as a unit of measurement. For example, although hedges are included in the tree canopy definition, no allowance is made for living green walls or green roofs. On this basis, Scentre considers that the provisions should be removed.	Oppose

If retained, Scentre also considers that the provisions should be broadened to account for canopy coverage that is achieved by different forms of planting, and not just solely reliant on tree coverage as a unit of measurement. For example, although hedges are included in the tree canopy definition, no allowance is made for living green walls or green roofs.</p> <p>On this basis, Scentre considers that the provisions should be removed.</p>	
Scentre (New Zealand) Limited/260.5	Kāinga Ora/ #FS2082.225	Oppose	<p>[Regarding the insertion of a new Sub-chapter 6.10A]</p> <p>Oppose the imposition of additional financial contributions for the development of commercial zone land in greenfield/brownfield locations resulting in one or more buildings and / or impervious surfaces that do not retain or plant 10 percent tree canopy cover.</p> <p>This provision should be removed.</p> <p>Scentre opposes the imposition of additional financial contributions as proposed by the Council. Scentre considers that requiring financial contributions in this manner operates as a further barrier to development, which is in stark contrast to the intensification-enabling provisions of the NPS-UD and the Housing Supply Act.</p> <p>To promote intensification while making provision for increased canopy coverage in developments, Scentre considers alternative provisions should be implemented which provide incentives for compliance, rather than penalties resulting from non-compliance. This will achieve the intended effects of incentivising canopy coverage, while limiting barriers to further development. If retained, Scentre also considers that the provisions should be broadened to account for canopy coverage that is achieved by different forms of planting, and not just solely reliant on tree coverage as a unit of measurement. For example, although hedges are included in the tree canopy definition, no allowance is made for living green walls or green roofs.</p> <p>On this basis, Scentre considers that the provisions should be removed.</p>	Support
Scentre (New Zealand) Limited/ #260.6		Seek Amendment	<p>[Regarding the insertion of a new Sub-chapter 6.10A]</p> <p>Amend the sub-chapter to include a financial contributions credit for sites that achieve tree coverage that goes above and beyond the 10% limit.</p>	
Scentre (New Zealand) Limited/260.6	Anne Dingwall/ #FS2037.355	Seek Amendment	<p>[Regarding the insertion of a new Sub-chapter 6.10A]</p> <p>Amend the sub-chapter to include a financial contributions credit for sites that achieve tree coverage that goes above and beyond the 10% limit.</p> <p>[The proposed amendment would] provide an incentive for developers to exceed the bare minimum threshold, causing increased contributions to canopy coverage.</p>	Oppose

Robyn Thomson/ #686.5		Oppose	Does not support financial contributions	
Robyn Thomson/ #686.7		Support	[Seeks] prescribed minimum green space and tree canopy, but [considers] it is not sufficient to achieve anything meaningful to local residents. [Further seeks retention of existing tree canopy]	
Ian McChesney/ #701.10		Seek Amendment	The proposal should increase minimum protection of green space and canopy cover. There should be no 'buying out' provision.	
Ian McChesney/701.10	Anne Dingwall/ #FS2037.562	Seek Amendment	The proposal should increase minimum protection of green space and canopy cover. There should be no 'buying out' provision. The proposal to allow developers to 'buy out' providing 20% tree canopy cover is a significant diminution of green space amenity in neighbourhoods. Such reduction in planting and green space, along with increased density, will have a negative impact on liveability. Reduction of permeable surfaces will also further strain drainage infrastructure at a time when it is clear more extreme rainfall is now the norm. The proposal acknowledges the need for green space but states only that 'we're working on' it (Housing and Business Choice, p.19). It is unacceptable to be asking residents to accept such assurances as a substitute for a properly balanced plan. It is another sign of this rushed-through plan change to align with the government dictate.	Support

Retirement Villages Association of New Zealand Inc/ #811.11		Oppose	Delete chapter 6.10A and rely on the MDRS landscaping provisions.	
Retirement Villages Association of New Zealand Inc/811.11	Summerset Group Holdings Limited/ #FS2097.7	Oppose	Delete chapter 6.10A and rely on the MDRS landscaping provisions. The RVA do not consider that this policy and rule suite is aligned with the intent of	Support

			<p>the NPSUD and Enabling Housing Act which is to enable intensification and remove overly restrictive planning provisions. The requirement for any residential development in the Christchurch City area to provide a minimum tree canopy cover of 20% of the development site area is considered to be very restrictive to any retirement village proposal. The MDRS also already provide a landscape planting standard and the chapter 6.10A proposal is much more restrictive than that. The RVA considers the (potentially minimal) improvements in heat island effects, stormwater runoff and carbon sequestration from this proposal can in no way justify the highly limiting and negative effects on residential development from this proposal. There are significantly more effective and efficient means of achieving the desired outcomes.</p>	
The Catholic Diocese of Christchurch / #823.41		Oppose	Delete all of the financial contributions draft provisions in their entirety.	
The Catholic Diocese of Christchurch /823.41	Anne Dingwall/ #FS2037.1273	Oppose	Delete all of the financial contributions draft provisions in their entirety. The provisions in their entirety concerning tree canopy cover and financial contributions (including related definitions and amendments to strategic objectives) are unworkable and onerous.	Oppose
The Catholic Diocese of Christchurch /823.41	Carter Group Limited/ #FS2045.214	Oppose	Delete all of the financial contributions draft provisions in their entirety. The Catholic Diocese of Christchurch /823.41	Vaughan Smith/ #FS2090.10	Oppose	Delete all of the financial contributions draft provisions in their entirety. The provisions in their entirety concerning tree canopy cover and financial contributions (including related definitions and amendments to strategic objectives) are unworkable and onerous.	Support
LMM Investments 2012 Limited / #826.4		Oppose	The proposed financial contributions policy should be deleted in its entirety.	
LMM Investments 2012 Limited /826.4	Vaughan Smith/ #FS2090.24	Oppose	<p>The proposed financial contributions policy should be deleted in its entirety.</p> <p>The proposed tree canopy cover and financial contributions provisions are unworkable and unreasonable.</p> <p>The provisions are difficult to understand and create considerable uncertainty. For example:</p> <ol style="list-style-type: none"> 1. If trees are retained over and above the 20% cover threshold will a financial credit be provided to the applicant? 2. It is not clear who would be qualified to undertake the assessment of the canopy cover. 3. The proposed definitions of PC14 introduce the definition of a 'hedge' with specific reference to the tree canopy cover and financial contributions provisions, yet those provisions do not utilise that term. 4. If a stormwater basin is heavily planted in native shrubs, should this receive a credit as plants (and not just trees) also provide for carbon sequestration? 5. How will the timing of assessment work in relation to consenting processes? For greenfield subdivisions for example, landscape plans are often not completed until after resource consent is issued. 	Support

			<p>The canopy cover provisions would be difficult to enforce. If canopy cover is determined as acceptable at the time of resource consent and 10 years or 15 years later one or some of those trees are cut down, who monitors and enforces that requirement? Does Council have the staff resources to maintain that level of monitoring across wide swathes of the city?</p> <p>Councils increasingly seek a reduction in reserve areas within greenfield subdivisions, on the basis of ongoing maintenance costs for the Council. It would be very difficult to achieve a 20% of net site area coverage in most greenfield subdivisions, noting that those reserve areas are also required for other purposes such as playground and open grass for play areas, that are incompatible with extensive tree canopy cover.</p> <p>The provisions require 20% of the net site area adjacent to road corridors to contain tree cover. Accommodating tree cover typically necessitates wider road corridors. Wider road corridors reduces land available for housing, in direct conflict with the existing District Plan provisions stipulating a minimum density of 15 hh/ha must be achieved for greenfield subdivision areas, and more generally the NPS-UD.</p> <p>The cost implications of not achieving tree cover are considerable and, given LMM does not consider the 20% cover is achievable, will add further to development costs that are then passed onto purchasers.</p> <p>The implications of this proposed policy are significant from an economic perspective and must be adequately justified by the Council.</p>	
Finn Jackson/ #832.1		Support	[Seek[s] that the council retains the tree canopy requirement and contributions plan.	
Finn Jackson/832.1	Anne Dingwall/ #FS2037.711	Support	[Seek[s] that the council retains the tree canopy requirement and contributions plan. I support the Tree Canopy Cover rules and Financial Contributions to restore our tree canopy. Trees are important in reducing emissions, providing shade and temperature control in the summer, alongside the other wide range of economic, health and social effects.	Support

Red Spur Ltd / #881.1		Oppose	<p>[T]he Submitter opposes the tree canopy cover provisions in their entirety.</p>	

Red Spur Ltd /881.1	Fiona Aston/ #FS2089.8	Oppose	<p>[T]he Submitter opposes the tree canopy cover provisions in their entirety.</p> <p>The relief sought is consistent with and gives effect to the Resource Management Act1991 (RMA), and in terms of s32 of the RMA is the most appropriate way for achievingthe purpose of the objectives of the proposal (including any consequential amendmentsto the same to give effect to the purpose and intent of this submission).</p> <p>[T]he PC14 tree canopy cover provisions are impractical andunworkable and will adversely affect the feasibility and take up of housing developmentopportunities including intensification enabled by PPC14 and the current District Plan. Theoutcomes will be contrary to the intent of the RMA including the RM Enabling HousingAmendment Act in enabling increased housing choice and affordability which contributesto a well functioning urban environment.</p>	Support
Red Spur Ltd / #881.2		Support	[S]upports the exclusion of Redmund Spur from the Operative Christchurch DistrictPlan and PC14 definitions of greenfield and brownfield areas, which by definition excludeRedmund Spur and are referenced in 6.10A.2.1.1 Policy – Contribution to tree canopy cover and6.10A.4.1.1 Permitted activities P2	
Red Spur Ltd /881.2	Kāinga Ora/ #FS2082.814	Support	<p>[S]upports the exclusion of Redmund Spur from the Operative Christchurch DistrictPlan and PC14 definitions of greenfield and brownfield areas, which by definition excludeRedmund Spur and are referenced in 6.10A.2.1.1 Policy – Contribution to tree canopy cover and6.10A.4.1.1 Permitted activities P2</p> <p>The Submitter supports existing urban areas, including Redmund Spur in its entirety, as being excluded from the tree canopy requirements with respect to greenfield and brownfield development road reserve areas.</p>	Oppose
Red Spur Ltd / #881.3		Seek Amendment	[Seeks that] an alternative, moreworkable approach [to this provision] should include the option of providing tree canopy off site, but within the widersubdivision area or elsewhere.	
Latimer Community Housing Trust/ #882.2		Seek Amendment	<p>Request the introduction of inclusionary Housing Plan which lists within the District Plan along the lines of the Queenstown Lakes Council, requir[ing] developers of new residential housing in the area to make a financial contribution to a fund to be used to provide affordable housing.</p> <p>We support the submission of Te Whare Roimata Trust [#105] and its recommendations.</p>	
Latimer Community Housing Trust/882.2	Kāinga Ora/ #FS2082.816	Seek Amendment	<p>Request the introduction of inclusionary Housing Plan which lists within the District Plan along the lines of the Queenstown Lakes Council, requir[ing] developers of new residential housing in the area to make a financial contribution to a fund to be used to provide affordable housing.</p> <p>We support the submission of Te Whare Roimata Trust [#105] and its recommendations.</p> <p>We support the submission of Te Whare Roimata Trust [#105] and its recommendations.</p> <p>What we want is to see is an inclusionary Housing Plan which lists within the District Plan along the lines of the Queenstown Lakes Council, which requires developers of new residential housing in the area to make a financial contribution to a fund to be used to provide affordable housing. Such a fund is similar to the contribution developers pay towards protecting our environment.</p> <p>The Latimer Community Housing Trust operates in the Inner City East/Linwood area The Trust’s purpose is to house the most financially stressed renters - single people, couples, single parent families and the working poor, to secure affordable housing and ensure local residents displaced as a consequence of housing intensification can be rehoused in this neighbourhood.</p>	Oppose
Claire Coveney/ #896.3		Support	Supports the retention of established trees in low density and medium density zones.	
Claire Coveney/896.3	Anne Dingwall/ #FS2037.683	Support	<p>Supports the retention of established trees in low density and medium density zones.</p> <p>I am seeing a lot of felling of trees in suburbs that have established trees up to 100 years old. Given our loss of biodiversity and the benefits of trees (health, biodiversity, shade, privacy, noise reduction) clear felling needs to be stopped.</p> <p>Plus commitment by council to reduce carbon emissions.</p> <p>Seek that a moratorium be placed on clear felling of sections in all subdivisions and rebuilding in all christchurch zones.</p>	Support

Summit Road Society/ #900.5		Seek Amendment	Supports the proposal to use the Financial Contribution process to ensure a tree canopy cover however would like to see it increased from 20% to 25%. Would like to see prioritisation of native plantings wherever possible.	
Summit Road Society/ #900.6		Seek Amendment	The Financial Contribution to include [provision for] riparian planting along waterways including small creeks.	
Waipuna Halswell-Hornby-Riccarton Community Board/ #902.10		Seek Amendment	[That policies and rules in 6.10A require] financial contributions regarding trees [to] be used in the ward that the development occurs in.	
Waipuna Halswell-Hornby-Riccarton Community Board/902.10	Kāinga Ora/ #FS2082.1272	Seek Amendment	[That policies and rules in 6.10A require] financial contributions regarding trees [to] be used in the ward that the development occurs in. The Board submits that these financial contributions will not necessarily help to increase the urban forest in the parts of the city where it is most needed due to a current deficit. critical that financial contributions regarding trees be used in the ward that the development occurs in. There needs to be a change to the financial contributions policy to address this. It is The Board suggests the financial contribution be used for trees in the vicinity or at the very least within the same ward area.	Oppose
Anne Dingwall/ #908.2		Support	[S]upports the Parliamentary Commissioner for the Environment's observations and recommendations regarding the importance of greenspace and trees, both public and private, given their relevance also for Christchurch and in particular PC14.	
Anne Dingwall/908.2	Anne Dingwall/ #FS2037.671	Support	<p>[S]upports the Parliamentary Commissioner for the Environment's observations and recommendations regarding the importance of greenspace and trees, both public and private, given their relevance also for Christchurch and in particular PC14.</p> <p>With reference to the Commissioner's observations and findings, Minister Parker should not limit his observations in support of reserve and open spaces just for Auckland. He references both "existing urban areas and green field developments". All cities required to change their District Plans to meet mandatory housing intensification should hold the government and the Minister to apply his concession not only to Auckland but to all. Auckland is not the only city suffering strife over flooding. The issue is more universal and accumulative as a result of past decisions involving city sprawl and infrastructure issues.</p> <p>Trees provide health and welfare benefits, in addition to mitigating the effects of climate change.</p> <p>Christchurch has a high water table. Since early colonial settlement, the variety of tree species that it is possible to grow is evident and contributes to the Garden City image.</p> <p>CCC mentions that land developers "may need to pay Financial Contributions to help mitigate some of the negative effects caused to our city's tree canopy." Just how that is to be applied is not specified. Council-approved criteria need to be established that determine when a financial contribution specific to trees needs to be applied.</p> <p>CCT makes a suggestion that this provision needs to be strengthened to take into account the time required to grow replacement trees to similar canopy cover equal to or more than that lost to make way for site developments.</p> <p>A possible mechanism for applying financial contributions would have the contribution tied to the property title and be an annual surcharge on rates until the replacement tree(s), wherever located, have achieved the target canopy cover.</p> <p>One-off contributions take little cognisance of the timeframes involved, or inflationary costs.</p> <p>Conversely, if clever design saves mature trees from felling, there could be a rates rebate to a property owner or a financial incentive for a developer.</p> <p>Scheduled trees should also qualify for rates rebate incentive. Adding new trees to a property could qualify for rates rebate when they attain significant canopy</p>	Support
Geoff Banks/ #918.1		Support	[S]eek[s] that the council retains the tree canopy requirement and contributions plan.	
Dylan Lange/ #1049.1		Support	[S]eek[s] that the council retains the tree canopy requirement and contributions plan.	
Claire Coveney/ #1087.1		Oppose	Opposes the Tree Canopy Cover and Financial Contribution provisions.

Jade McFarlane/ #790.3		Seek Amendment	PC14 is too limited in scope to create the level of change desired in the Urban Forest Plan. Initiatives for tree canopy planting in Existing Development areas need to be explored and implemented in order to achieve the goals of the Urban Forest Plan.	
Jade McFarlane/790.3	Anne Dingwall/ #FS2037.738	Seek Amendment	<p>PC14 is too limited in scope to create the level of change desired in the Urban Forest Plan. Initiatives for tree canopy planting in Existing Development areas need to be explored and implemented in order to achieve the goals of the Urban Forest Plan.</p> <p>No suggested amendments to Existing Development approach about for PC14 however this needs to be explored and implemented in order to achieve the goals of the Urban Forest Plan- the uptake from this will far outweigh the achievements for new builds and, through use of technology and apps, would create a groundswell of people acting to green our city, in the existing neighbourhoods that need it.</p> <p>A fund with the benefit of compound interest is the path forward for sustainable implementation in existing neighbourhoods where, especially in lower social economic areas, will not be achieved in a piecemeal 'owner pays only' approach...</p> <p>The Council could provide 1 voucher per allotment and start in those areas with the least cover (as outlined in red/ orange in the Urban Forest Plan). This would not be regulated like the new build process but would create a groundswell of action and result ultimately in more benefit than what is being promoted currently as canopy associated with new builds only.</p> <p>Vouchers would be for nurseries (ideally CCC nursery, but all, initially), which would give control of type, size and quality of tree, would be given strategically to those house/ landowners in 'low canopy' areas identified as orange and red in the Urban Forest Plan.</p> <p>Corporate sponsors and philanthropists would likely get on board with this given it is 'community enhancing', and there would be an ability to sponsor trees both on the vouchers themselves, or through block party/ planting events, as well as via a new online database where sponsors could track where their sponsored trees ended up on a GIS based web map system.</p> <p>https://digitalcommons.iwu.edu/cgi/viewcontent.cgi?article=1431&context=uer</p> <p>Increases in canopy coverage yield highest returns in neighbourhoods with lowest average canopy levels, typically those with low average incomes. As a result, a program of targeted vouchers to families in low-income areas would be most efficient. In doing so, environmental equity would also be enhanced.</p>	Support

Pamela-Jayne Cooper/ #625.1		Seek Amendment	Amend Policy 6.10A.2.1.1 to maintain the existing tree canopy cover if it is over 20%, new builds should achieve 30% canopy cover and seeks no removal of existing mature trees.	
Pamela-Jayne Cooper/625.1	Anne Dingwall/ #FS2037.537	Seek Amendment	Amend Policy 6.10A.2.1.1 to maintain the existing tree canopy cover if it is over 20%, new builds should achieve 30% canopy cover and seeks no removal of existing mature trees. While I support financial enforcement on developers, it does not go far enough. Any progressive developer will not be put off by additional tree expenses. Indeed they will welcome them, as they will only serve to enhance their investment by providing safe, healthy and resilient havens for buyers and residents. Developers whom oppose tree retention/and or new plantings citing them as being unviable financial hurdles should be scrutinised the more. In this global climate, all developments should align themselves to resilience, adoptability and public wellness. Not matter the initial costs. This cost will prove to be the lesser over time. And there are masses of respected climate models out there, that foretell the economical disaster, if we fail to do enough.	Support

Marjorie Manthei/ #237.51		Seek Amendment	Increase cover in (i) to 25%	
Marjorie Manthei/237.51	Anne Dingwall/ #FS2037.337	Seek Amendment	Increase cover in (i) to 25% Conclusions from the Lincoln University thesis (Megan Austin) were based on interviews with 16 representatives from relevant professions, a literature review and analysis of the first version of PC14. One of the emerging themes related to landscaping and trees: "...although it was the common consensus that the requirement to provide 20% landscaping coverage was, for the most part, a positive standard that was intended to protect some level of amenity and character, there were critiques expressed surrounding how effective the 20% would be" (p 45). The 20% coverage was seen as minimal, but better than nothing (p 44). There was concern about the environmental implications of the level of intensification in Plan Change 14, including (i) insufficient space for trees to grow properly (ii) tall buildings causing shade and (iii) stormwater runoff. Victoria Neighbourhood Association (VNA) / #61.23		Support	[Retain] as written, Policies 6.10A.2.1.2 and 2.1.3, Standard 6.10A.4.2.2 (Financial Contributions).	
Victoria Neighbourhood Association (VNA) /61.23	Anne Dingwall/ #FS2037.109	Support	[Retain] as written, Policies 6.10A.2.1.2 and 2.1.3, Standard 6.10A.4.2.2 (Financial Contributions). The VNA supports the provisions for retaining, increasing and maintaining the health of Christchurch’s tree canopy cover, set out in 6.10A and supported by the Section 32 Evaluation report (Part 7). We believe this is one way of addressing at least some of negative effects of intensification, acknowledged in the associated s32 report.	Support
Victoria Neighbourhood Association (VNA) / #61.29		Support	Supports Policy 6.10A.2.1.2.	
Victoria Neighbourhood Association (VNA) /61.29	Cambridge 137 Limited/ #FS2042.19	Support	Supports Policy 6.10A.2.1.2. The VNA supports the provisions for retaining, increasing and maintaining the health of Christchurch’s tree canopy cover, set out in 6.10A and supported by the Section 32 Evaluation report (Part 7). In particular, we support, as written Policies 6.10A.2.1.2 and 2.1.3 Standard 6.10A.4.2.2 (Financial Contributions). We submit that in many cases the provisions need to be strengthened, a message consistent with VNA’s submission on the Urban Forest Plan, including: - Commercial/industrial sites in Strategic Objective 3.3.10 (a) (ii) E, - Objective 6.10A.2.1, Policy 6.10A.2.1.1 and Standard 6.10A.4.1.1; Increase the minimum cover from 20% to 25% (6.10A.4.1.1); - Discourage the use of impervious/impermeable surfaces; - Increase the Financial Contribution per tree significantly as a disincentive to removing or not replacing trees on the development site; - Rewrite the Matters of Discretion to make it less likely that trees will be removed or not replaced on site. Carter Group Limited/814.55	Chapman Tripp/ #FS2063.115	Oppose	Oppose Policy 6.10A.2.1.3. Seek that it be deleted. The requirements for tree planting (in terms of location, soil volume, etc) are unnecessarily and unreasonably prescriptive and remove property owners' reasonable freedom and choice to landscape their properties as they choose. Moreover, such requirements are difficult to monitor and enforce on an ongoing basis (e.g. as new owners or tenants choose to re-landscape) and are unnecessary accounting for the control or discretion in regards to these matters where trees are expressly required through resource consent processes. Consent notices in respect of tree planting are an unreasonable and onerous requirement, and are considered impracticable for enforcing residential landscaping which is commonly and regularly altered to reflect changing needs and preferences over time. Consent notices are likely to be overlooked or ignored or impose costly and inefficient regulatory processes to retrospectively address landscaping works in breach of consent notices. Policies relating to trees in road reserve are unnecessary, noting that such trees can be adequately managed by Council in its capacity as road controlling authority.	Support

Rosemary Neave/72.1	Anne Dingwall/ #FS2037.148	Support	Retain the Tree Canopy Cover rules and Financial Contributions.	Support

			<p>Trees are important in reducing emissions, providing shade and temperature control in the summer, alongside the other wide range of economic, health and social effects.</p> <p>The council will require 20% of new residential developments to be covered by trees, or otherwise pay a financial contribution to help the council plant more trees on public land. Christchurch has an appallingly low tree canopy cover rate of 13% compared to Auckland (18%) and Wellington (30%). Trees have a wide range of environmental, health, social and economic benefits and are important for the future of our city.</p>	
Nikki Smetham/ #112.7		Seek Amendment	Seek a reduced tree canopy coverage, based on 10 years growth (a common measure for tree size), which is more likely to be achieved and maintained at this scale.	
Nikki Smetham/112.7	Anne Dingwall/ #FS2037.189	Seek Amendment	<p>Seek a reduced tree canopy coverage, based on 10 years growth (a common measure for tree size), which is more likely to be achieved and maintained at this scale.</p> <p>10 years growth is more likely to be achieved and maintained at this scale.</p> <ul style="list-style-type: none"> We have reservations about basing this on mature canopy size as per CCC's tree classification guide on their website. For example, under this tree classification, lancewoods are considered a large tree, and kowhais a very large tree! This maybe the case if these trees are growing in optimum conditions for hundreds of years, but these trees will be planted in an urban environment restricting their growth. It is noted that buildings are typically designed for a minimum of 50 years. We note that the tree planting guide supports the use of structural soil for enabling root growth under paved areas, but obviously trees planted in structural soil are unlikely to develop a mature canopy akin to that tree species. We are concerned tree canopy and outdoor living space will overlap, and consequently, impact solar aspect for outdoor living spaces. We have reservations about how tree canopy cover will be measured. Often trees are planting along site boundaries, and so where the mature canopy projects beyond the boundary is this included/ excluded in the minimum canopy requirements? At what stage of CCC approval process would the tree canopy size, and necessary soil volume requirements to support the projected canopy size be assessed/ approved by CCC? Will the tree species need to be confirmed at resource consent stage? What happens if the tree species approved (or similar backup tree species) are not available during implementation, particularly as there is a preference to plant within the "planting season" between 1 April and 30 September. Will CCC periodically check that the trees planted to achieve minimum canopy coverage have been retained and are growing well. Again, if the tree size was based on 10 years instead of maturity, it would be easier to monitor and achieve the desired outcome. 	Oppose

Pippa Marshall/271.1	Anne Dingwall/ #FS2037.382	Support	<p>[S]eek[s] that the council retains the tree canopy requirement and contributions plan.</p> <p>[S]upport[s] the Tree Canopy Cover rules and Financial Contributions to restore our tree canopy. Trees are important in reducing emissions, providing shade and temperature control in the summer, alongside the other wide range of economic, health and social effects.</p> <p>The council will require 20% of new residential developments to be covered by trees, or otherwise pay a financial contribution to help the council plant more trees on public land. Christchurch has an appallingly low tree canopy cover rate of 13% compared to Auckland (18%) and Wellington (30%). Trees have a wide range of environmental, health, social and economic benefits and are important for the future of our city.</p>	Support
Waipapa Papanui-Innes-Central Community Board/ #288.2		Support	[S]eeks the advancement of the signalled Qualifying Matters and mechanisms protecting tree canopy.	
Waipapa Papanui-Innes-Central Community Board/288.2	Cambridge 137 Limited/ #FS2042.35	Support	[S]eeks the advancement of the signalled Qualifying Matters and mechanisms protecting tree canopy. The Board acknowledges government legislation directing changes, and that the National Policy Statement on Urban Development 2020 requires greater building development – both residential and commercial. It does though wish to re-emphasise some of the previous points of the Papanui-Innes and Linwood-Central-Heathcote community boards still considered relevant. Within the Papanui area, for example, where high level development is proposed, the Board considers that there must be emphasis given to additional community spaces, transport infrastructure, schooling and other key components of the health and wellbeing of our communities. The Board supports the proposed changes generally speaking, however strongly recommends strategic planning and looking ahead to, for example, 15-Minute City, 5-Minute Neighbourhoods, and a city for the future. The Board supports the proposed Qualifying Matters. The Board believes that central city residents are comfortable with intensification, however established parts of the city within the four avenues, particularly north of Cathedral Square, have been concerned with the proposed higher density and heights of buildings above three stories which impinges on neighbours' sunlight including residences with solar panels. The Board commends the proposal for a Qualifying Matter to protect sunlight access for homes. The Board is concerned that high intensity development has the potential to lead to issues of anti-social behaviour thus increasing the impact on New Zealand Police, and mental health services resources that are already highly stressed. The Linwood-Central-Heathcote Community Board continually heard of issues from its Phillipstown residents who are experiencing high density in a low social-economic area. The Board notes that while economic and environmental impacts have been considered they do not feel that the social and well-being consequences have been considered as thoroughly. The Board recognises that onsite parking is not a provision for residential development, however the Board wants to have compulsory provision introduced for loading bays and accessible parking. The Board believes there is a need to review options whereby residents could request resident-only parking through a permit system. The Linwood-Central-Heathcote Community Board acknowledged the lack of tree canopy within its Board area and developed the Greening the East Development Plan to increase the tree canopy and to contribute to decreasing the impact of climate change and increase habitat for native wildlife. This impacts the wider Board area now. The Board commends the proposal for a mechanism to help maintain the city's tree canopy cover on land that is subdivided, whereby financial contributions could be required	Oppose

			from those developing land that do not keep existing trees or plant 20% tree canopy cover on a site, and 15% tree canopy over any new road. The Board advocates that financial contributions from impacts from developers be available for land purchases for greenspace for the purpose of planting canopy trees where there is a need and it is appropriate. The Board having reviewed maps of the Board area considers there are some needs for additional greenspace, particularly around St Albans. The Board also supports the proposal to identify protected trees listed in the current District Plan as a Qualifying Matter. The Board highlights community concerns that infrastructure may not be adequate to support continual growth through intensification. Concerns raised include a lack of amenities, community facilities and recreational greenspace, and the effects of intensification on transport corridors and networks. The Board urges that changes have a view to retaining spaces for community facilities, sport and recreation facilities, greenspace, and amenities in areas of high intensification, and areas earmarked for future intensification. Auditing and benchmarking for the provision of these amenities should inform these discussions. The Board will be advocating through the Long Term Plan and other such avenues for the retention of greenspace as parks, pocket parks, or gathering spaces for community use, and to advocate that planning changes support that flood mitigation is considered in new developments to ensure existing networks are not overwhelmed and can remain effective in significant rain events. The Board wishes to especially ensure three waters infrastructure is able to appropriately manage and support intensification and development, with flood mitigation projects investigated and implemented where necessary. Finally, the Board suggests that any opportunity for the goals of the Ōtautahi Christchurch Climate Resilience Strategy and the Ōtautahi-Christchurch Urban Forest Plan to be reflected here is seized.

Historic Places Canterbury/ #835.8		Support	The submitter supports the proposal to require financial contributions to allow mitigating planting on council owned land where the required tree-canopy cover, through either retention of existing trees or new planting, has not been met.	
Historic Places Canterbury/835.8	Anne Dingwall/ #FS2037.595	Support	<p>The submitter supports the proposal to require financial contributions to allow mitigating planting on council owned land where the required tree-canopy cover, through either retention of existing trees or new planting, has not been met.</p> <p>Offsetting trees removed for intensification by planting on Council land will never fully compensate for the loss of tree cover and consequent loss of amenity in the areas affected by intensification. Even where sufficient trees are planted to meet the canopy rules, it will be years before a young tree can provide the environmental benefits and the amenity for people that mature trees provide. In fact,</p> <p>The submitter has some concerns that the financial contribution provision may prove to be a bit of a double-edged sword. It would be unfortunate if a well-meaning provision was used to provide an easy out for developers to pay up rather than seek to protect existing trees through clever design. Removal of mature trees needs to be seen as a last resort. There is a need for the Council to work much more closely with developers to overcome the clean-slate mindset which seems to prevail at present and the financial contribution need to be set at a level sufficient to discourage this clean-slate approach.</p>	Support

Doug Latham/ #30.2		Seek Amendment	Amend Rule 6.10A.4.1.1 Tree canopy cover so that the 20% minimum threshold for canopy cover is reduced to 10%.	
Doug Latham/ 30.2	Anne Dingwall/ #FS2037.58	Seek Amendment		Oppose

			Amend Rule 6.10A.4.1.1 Tree canopy cover so that the 20% minimum threshold for canopy cover is reduced to 10%. My submission is that a 20% minimum threshold for canopy cover is too high, should be 10%.	
Doug Latham/ #30.3		Seek Amendment	Amend Rule 6.10A.4.1.1 Tree canopy cover to avoid applying the rule to single dwellings, it should only apply to multi-unit [developments].	
Joanne Knudsen/ #33.1		Seek Amendment	Amend Rule 6.10A.4.1.1 so that at least 25% tree canopy is provided for new developments.	
Joanne Knudsen/33.1	Anne Dingwall/ #FS2037.59	Seek Amendment	Amend Rule 6.10A.4.1.1 so that at least 25% tree canopy is provided for new developments. I agree and was surprised that until now there was nothing in the District Plan retaining our tree canopy. We are known all around the world as the Garden City and we don't want to be losing anymore canopy.	Support
Victoria Neighbourhood Association (VNA) / #61.19		Seek Amendment	Retain the tree canopy requirement and contributions plan but increase the minimum tree canopy cover from 20% to 25% (6.10A.4.1.1).	
Victoria Neighbourhood Association (VNA) /61.19	Anne Dingwall/ #FS2037.105	Seek Amendment	Retain the tree canopy requirement and contributions plan but increase the minimum tree canopy cover from 20% to 25% (6.10A.4.1.1). The VNA supports the provisions for retaining, increasing and maintaining the health of Christchurch's tree canopy cover, set out in 6.10A and supported by the Section 32 Evaluation report (Part 7). In particular, we support, as written Policies 6.10A.2.1.2 and 2.1.3 Standard 6.10A.4.2.2 (Financial Contributions). We submit that in many cases the provisions need to be strengthened, a message consistent with VNA's submission on the Urban Forest Plan.	Support
Victoria Neighbourhood Association (VNA) /61.19	Cambridge 137 Limited/ #FS2042.16	Seek Amendment	Retain the tree canopy requirement and contributions plan but increase the minimum tree canopy cover from 20% to 25% (6.10A.4.1.1). The VNA supports the provisions for retaining, increasing and maintaining the health of Christchurch's tree canopy cover, set out in 6.10A and supported by the Section 32 Evaluation report (Part 7). In particular, we support, as written Policies 6.10A.2.1.2 and 2.1.3 Standard 6.10A.4.2.2 (Financial Contributions). We submit that in many cases the provisions need to be strengthened, a message consistent with VNA's submission on the Urban Forest Plan.	Oppose
Victoria Neighbourhood Association (VNA) /61.19	Chapman Tripp/ #FS2063.4	Seek Amendment	Retain the tree canopy requirement and contributions plan but increase the minimum tree canopy cover from 20% to 25% (6.10A.4.1.1). The VNA supports the provisions for retaining, increasing and maintaining the health of Christchurch's tree canopy cover, set out in 6.10A and supported by the Section 32 Evaluation report (Part 7). In particular, we support, as written Policies 6.10A.2.1.2 and 2.1.3 Standard 6.10A.4.2.2 (Financial Contributions). We submit that in many cases the provisions need to be strengthened, a message consistent with VNA's submission on the Urban Forest Plan.	Oppose
Victoria Neighbourhood Association (VNA) /61.19	Chapman Tripp/ #FS2064.4	Seek Amendment	Retain the tree canopy requirement and contributions plan but increase the minimum tree canopy cover from 20% to 25% (6.10A.4.1.1). The VNA supports the provisions for retaining, increasing and maintaining the health of Christchurch's tree canopy cover, set out in 6.10A and supported by the Section 32 Evaluation report (Part 7). In particular, we support, as written Policies 6.10A.2.1.2 and 2.1.3 Standard 6.10A.4.2.2 (Financial Contributions). We submit that in many cases the provisions need to be strengthened, a message consistent with VNA's submission on the Urban Forest Plan.	Oppose
Victoria Neighbourhood Association (VNA) / #61.33		Seek Amendment	Amend 6.10A.4.1.1 by increasing the minimum tree canopy cover from 20% to 25%.	
Victoria Neighbourhood Association (VNA) /61.33	Cambridge 137 Limited/ #FS2042.21	Seek Amendment	Amend 6.10A.4.1.1 by increasing the minimum tree canopy cover from 20% to 25%. The VNA supports the provisions for retaining, increasing and maintaining the health of Christchurch's tree canopy cover, set out in 6.10A and supported by the Section 32 Evaluation report (Part 7). In particular, we support, as written Policies 6.10A.2.1.2 and 2.1.3 Standard 6.10A.4.2.2 (Financial Contributions). We submit that in many cases the provisions need to be strengthened, a message consistent with VNA's submission on the Urban Forest Plan, including: - Commercial/industrial sites in Strategic Objective 3.3.10 (a) (ii) E, - Objective 6.10A.2.1, Policy 6.10A.2.1.1 and Standard 6.10A.4.1.1; Increase the minimum cover from 20% to 25% (6.10A.4.1.1);	Oppose

			<ul style="list-style-type: none"> - Discourage the use of impervious/impermeable surfaces; - Increase the Financial Contribution per tree significantly as a disincentive to removing or not replacing trees on the development site; - Rewrite the Matters of Discretion to make it less likely that trees will be removed or not replaced on site. 	
Victoria Neighbourhood Association (VNA) / #61.67		Seek Amendment	Include commercial/industrial sites in Standard 6.10A.4.1.1	
Addington Neighbourhood Association / #205.25		Support	That developers are prevented from clearing every tree on a site before they apply for a building consent.	
Addington Neighbourhood Association /205.25	Chapman Tripp/ #FS2063.35	Support	That developers are prevented from clearing every tree on a site before they apply for a building consent. Often, the established trees removed by the developer are not replaced with trees that will eventually grow to the same size.	Oppose
Addington Neighbourhood Association /205.25	Chapman Tripp/ #FS2064.34	Support	That developers are prevented from clearing every tree on a site before they apply for a building consent. Often, the established trees removed by the developer are not replaced with trees that will eventually grow to the same size.	Oppose
Addington Neighbourhood Association /205.25	Kāinga Ora/ #FS2082.145	Support	That developers are prevented from clearing every tree on a site before they apply for a building consent. Often, the established trees removed by the developer are not replaced with trees that will eventually grow to the same size.	Oppose
Marjorie Manthei/ #237.54		Seek Amendment	[For P1 and P2], Clarify that provisions apply everywhere in Christchurch, including the Central City and Hight Density ResidentialZones/Precincts	
Sutherlands Estates Limited / #728.9		Seek Amendment	Rule 6.10A.4.1.1 P2 Amend the rule so that only the 15% street tree canopy requirement is applicable to a vacant lot greenfield subdivision. Delete Activity specific standards – Tree canopy cover clause (a) and (b), and amend clause (d) to only refer to the 15% road corridor cover	
Benrogan Estates Ltd/ #819.6		Seek Amendment	Amend the rule so that only the 15% street tree canopy requirement is applicable to a vacant lot greenfield subdivision. Delete Activity specific standards – Tree canopy cover clause (a) and (b), an amend clause (d) to only refer to the 15% road corridor cover.	
Knights Stream Estates Ltd/ #820.9		Seek Amendment	Amend the rule so that only the 15% streettree canopy requirement is applicable to avacant lot greenfield subdivision.Delete Activity specific standards – Treecanopy cover clause (a) and (b), an amendclause (d) to only refer to the 15% roadcorridor cover.	
The Catholic Diocese of Christchurch / #823.52		Oppose	Delete all of the financial contributions draft provisions in their entirety.	
The Catholic Diocese of Christchurch /823.52	Anne Dingwall/ #FS2037.1284	Oppose	Delete all of the financial contributions draft provisions in their entirety. The rules are opposed in their entirety for the reasons expressed above and noting they are arbitrary, unclear and open to interpretation. Among other concerns, the rules apply to ‘any residential development except for extensions or accessory buildings...’, which might capture non-built improvements (as residential development), such as hard or soft landscaping works, internal alterations, first floor additions, etc.	Oppose
The Catholic Diocese of Christchurch /823.52	Carter Group Limited/ #FS2045.225	Oppose	Delete all of the financial contributions draft provisions in their entirety. The rules are opposed in their entirety for the reasons expressed above and noting they are arbitrary, unclear and open to interpretation. 			and open to interpretation. Among other concerns, the rules apply to 'any residential development except for extensions or accessory buildings...', which might capture non-built improvements (as residential development), such as hard or soft landscaping works, internal alterations, first floor additions, etc.	
Transpower New Zealand Limited / #878.8		Seek Amendment	Amend 6.10A.4.1.1 P1 and P2 to include an advice note as follows: "Advice Note: Vegetation to be planted around the National Grid should be selected and/or managed to ensure that it will not result in that vegetation breaching the Electricity (Hazards from Trees) Regulations 2003."	
Transpower New Zealand Limited /878.8	Orion New Zealand Limited/ #FS2056.8	Seek Amendment	Amend 6.10A.4.1.1 P1 and P2 to include an advice note as follows: "Advice Note: Vegetation to be planted around the National Grid should be selected and/or managed to ensure that it will not result in that vegetation breaching the Electricity (Hazards from Trees) Regulations 2003." Seeks amendment to 6.10A.4.1.1 P1 and P2 to include an advice note that references the Electricity (Hazards from Trees) Regulations 2003 in order to give effect to Policy 10 of the NPSET and ensure that future compliance with the Regulations is achieved. The wording, as an advice note, mirrors the advice note included in the operative provisions in Chapter 14 of the District Plan.	Support
Danne Mora Limited/ #903.1		Seek Amendment	Require the tree canopy rule applies to all new development in the city (Rule 6.10A.4.1.1 P1 and P2).	
Danne Mora Limited/903.1	Anne Dingwall/ #FS2037.679	Seek Amendment	Require the tree canopy rule applies to all new development in the city (Rule 6.10A.4.1.1 P1 and P2). It is unclear why the tree canopy rule requirements only apply to residential developments. Given the Council has signalled to reduce carbon emissions, reduce stormwater runoff, mitigate heat island effects and improve the city's biodiversity and amenity, it is unclear why residential development needs to solely overcome these matters. There has been no consideration for environmental or site specific constraints as to whether trees that are required to be planted will survive. Constraints such as high groundwater have proven difficult for residential developments to plant and retain the trees within the road corridor. We are continuously having issues with the street tree team at CCC for approving trees within the road corridor which is costly and causing undue delays to those developing the land. The tree canopy requirement for individual lots has not been thought through well. It is most likely that the canopy will be provided near or within outdoor living space areas. Having a large tree canopy in these areas will be at the detriment of sunlight and solar gain into the dwellings themselves. The very thing CCC are trying to prevent through the inclusion of a different recession plane rule framework.	Support
Danne Mora Limited/903.1	Red Spur Ltd/ #FS2068.49	Seek Amendment	Require the tree canopy rule applies to all new development in the city (Rule 6.10A.4.1.1 P1 and P2). It is unclear why the tree canopy rule requirements only apply to residential developments. Danne Mora Limited/ #903.2		Seek Amendment	<p>Amend the rule so that only the 15% street tree canopy requirement is applicable to a vacant lot greenfield subdivision. Delete Activity specific standards – Tree canopy cover clause (a) and (b), an amend [amend] clause (d) to only refer to the 15% road corridor cover.</p>	
Danne Mora Limited/903.2	Red Spur Ltd/ #FS2068.50	Seek Amendment	<p>Amend the rule so that only the 15% street tree canopy requirement is applicable to a vacant lot greenfield subdivision. Delete Activity specific standards – Tree canopy cover clause (a) and (b), an amend [amend] clause (d) to only refer to the 15% road corridor cover. It is appropriate for a greenfield subdivision to either provide street trees or pay a financial contribution for it. What is not considered appropriate is for a greenfield subdivision which is creating vacant lots for further development to have to also provide or pay for the tree canopy cover for the residential units at the time of subdivision. The definition of development site as applied to a subdivision would encompass all the land contained within the subdivision, including roads and reserves. That would mean that the area of land within the roads would be counted twice – once for the 20% development site cover under point (a) and again for the 15% road corridor cover under point (c). These means that 20% cover calculated at the time of the subdivision would be much larger than for the individual residential allotments created. On seeking clarification from Council staff. It was suggested that a consent notice would be placed on the residential lots to require the 20% cover, as per point (a) of this rule. It's unclear whether this 20% would be the calculation of the overall development site as noted above, or for each lot. If it is for each lot, then requiring 20% cover under P2 is not necessary, as the development of each individual is covered by P1.</p>	Support

Danne Mora Limited/ #903.3		Seek Amendment	Amend to rule to make it clear that reserves that are vested to Council with enhancements can offset the tree canopy rules for the development.	
Danne Mora Limited/903.3	Red Spur Ltd/ #FS2068.51	Seek Amendment	Amend to rule to make it clear that reserves that are vested to Council with enhancements can offset the tree canopy rules for the development. In greenfield subdivisions there are a number of situations where reserves are vested to Council with enhancements. For example, enhancing waterways. In these situations, reserve contributions are not attributed to these reserves. We therefore support the approach by Council that these reserves can offset the tree canopy rule requirements. However, we consider that this needs to be more explicit in the rules to ensure this happens.	Support

Victoria Neighbourhood Association (VNA) / #61.20		Seek Amendment	Discourage the use of impervious/impermeable surfaces around the tree roots.	
Victoria Neighbourhood Association (VNA) /61.20	Anne Dingwall/ #FS2037.106	Seek Amendment	Discourage the use of impervious/impermeable surfaces around the tree roots. We do not consider that impervious surfaces below tree canopies should be included within minimum required landscape areas. Landscaping at ground level performs a function of allowing excess stormwater to percolate into the soils to help mitigate excess stormwater load to infrastructure, and should therefore not be reduced below the minimum designated percentage.	Support
Marjorie Manthei/ #237.55		Seek Amendment	Re (vii) : Consider how to address [the longevity of the trees] Decrease the maximum percentage in (viii) as much as possible	
Marjorie Manthei/237.55	Anne Dingwall/ #FS2037.338	Seek Amendment	Re (vii) : Consider how to address [the longevity of the trees] Decrease the maximum percentage in (viii) as much as possible I support 6.10A.4.2.1 (a) and (b) Tree canopy cover standards and calculations, with the following reservation about (a) (vii) - There is nothing about how long retained or planted trees must stay in the ground, or whether "neglect" will be an acceptable excuse for removing them at a later time or how Council will monitor whether in fact the	Support

trees do remain. I have seen examples in my own neighbourhood of the few shrubs or small trees planted on new developments to meet requirements being ripped out or left to die, without any apparent consequences.

Re (viii): Given that impact of intensification on water runoff, impervious (or even semi-impermeable surfaces such as artificial grass) should be discouraged.

Peter Earl/ #399.2

Seek Amendment

Amend Rule 6.10A.4.2.1, Table 1 by adding a column with minimum soil area widths for various tree size classes as shown in red below:

Table 1 - Tree size classes with their corresponding height and projected canopy size:

<u>Tree size classes</u>	<u>Tree height (m)</u>	<u>Projected tree canopy cover at maturity (m²)</u>	<u>Land area (m²) and soil volume (m³) required*</u>	<u>Minimum dimension of planting area/ berm</u>
Small	0-5	10	3.8 *	1.5m
Medium	6-12	67	25.5 *	2m
Large	13-20	186	70.8 *	2.5m
Very Large	20+	250	95.4 *	3m
Average tree size	-	130	50.0 *	n/a

** Soil volume required for a tree/tree roots (m³) equals the land area (m²) x 1m depth.*

Christchurch City Council/751.19

Anne Dingwall/ #FS2037.841

Seek Amendment

Amend Rule 6.10A.4.2.1, Table 1 by adding a column with minimum soil area widths for various tree size classes as shown in red below:

Table 1 - Tree size classes with their corresponding height and projected canopy size:

<u>Tree size classes</u>	<u>Tree height (m)</u>	<u>Projected tree canopy cover at maturity (m²)</u>	<u>Land area (m²) and soil volume (m³) required*</u>	<u>Minimum dimension of planting area/ berm</u>
Small	0-5	10	3.8 *	1.5m
Medium	6-12	67	25.5 *	2m
Large	13-20	186	70.8 *	2.5m
Very Large	20+	250	95.4 *	3m
Average tree size	-	130	50.0 *	n/a

** Soil volume required for a tree/tree roots (m³) equals the land area (m²) x 1m depth.*

Table 1 in Rule 6.10A.4.2.1 provides the requirements for minimum land/soil area and volume for each tree size class. However, to provide trees with adequate room to grow and allow access to sufficient water and nutrients, while avoiding damage to any infrastructure, the loose soil area provided for tree roots needs to have sufficient

Support

			width that suits the tree size. The right tree for the right place, and conversely, the right place for the right tree will ensure the trees planted can reach their full potential and maximise the benefits they provide for the site and the community. It is therefore proposed to add the minimum dimension requirement to the land/soil area.

Nikki Smetham/ #112.5		Seek Amendment	Seek a guarantee that the financial contributions collected by CCC will indeed be used for offsite replacement tree planting, and not for general revenue gathering (i.e. reallocated for maintenance or roading infrastructure).	
Nikki Smetham/112.5	Anne Dingwall/ #FS2037.187	Seek Amendment	Seek a guarantee that the financial contributions collected by CCC will indeed be used for offsite replacement tree planting, and not for general revenue gathering (i.e. reallocated for maintenance or roading infrastructure).	Support
Marjorie Manthei/ #237.57		Seek Amendment	Rewrite 6.10A.4.2.2 (a) to read “..If the tree canopy cover requirements... cannot be met [rather than “are not met”] to make it clearer that maintaining or planting on the same site is the first priority and (ii) increase the amount per tree from \$2037.00 to at least \$4074.	
John Bennett/ #367.7		Seek Amendment	Ensure the financial contribution required for not meeting the landscaping requirements is high enough that meeting the requirement will be financially beneficial to the developer.	
John Bennett/367.7	Anne Dingwall/ #FS2037.468	Seek Amendment	Ensure the financial contribution required for not meeting the landscaping requirements is high enough that meeting the requirement will be financially beneficial to the developer. The introduction of a minimum 20% coverage for tree canopy is to be commended. But the financial contribution for not meeting this requirement needs to be punitive to actively encourage that provision and not provide a loophole out.	Support
Sutherlands Estates Limited / #728.4		Seek Amendment	Make clearer in the plan how the costs have been attributed and whether it is GST inclusive	
Jade McFarlane/ #790.1		Seek Amendment	Reduce the cost of financial contributions for not providing 15% tree canopy to \$1000 per tree; refuse rate rebate if the remaining 5% tree canopy is not provided; provide an agreed rate rebate to the landowner for the next 2 years as an incentive for providing the additional 5% tree canopy; and /or increase the standard building site coverage of 5% if the additional 5% tree canopy is planted.	
Benrogan Estates Ltd/ #819.8		Seek Amendment	Make clearer in the plan how the costs [of \$2,037.00 per tree] have been attributed and whether it is GST inclusive.	
Knights Stream Estates Ltd/ #820.7		Oppose	Make clearer in the plan how the costs have been attributed and whether it is GST inclusive.	
Danne Mora Limited/ #903.4		Seek Amendment	Make clearer in the plan how the costs have been attributed and whether it is GST inclusive.	
Danne Mora Limited/903.4	Red Spur Ltd/ #FS2068.52	Seek Amendment	Make clearer in the plan how the costs have been attributed and whether it is GST inclusive. There is no reasoning given in any of the Section 32 documentation for how the financial contribution of \$2,037.00 per tree has been calculated. Furthermore, it is unclear whether this is GST inclusive or not. The figure does not appear to relate to the Minimum Acceptable Rates provided for bonding under the IDS or for the maintenance period of 2 years. The CCC bond schedule for street trees allows for: For street trees that is \$500 per tree (includes the tree pit), and \$40 per tree per month for maintenance. Total per tree for 2 year bond period of \$1,460.00 all excl GST. With GST included that is only \$1,679.00. Assuming \$2,037 is excluding GST this is 1 tree plus 38.4 months maintenance. If Inc GST its 31.7 months of maintenance.	Support
Davie Lovell-Smith Ltd / #914.9		Seek Amendment	Amend 6.10A.4.2.2 Make clearer in the plan how the costs have been attributed and whether it is GST inclusive.	
Milns Park Limited / #916.6		Seek Amendment	6.10A.4.2.2 Make clearer in the plan how the costs have been attributed and whether it is GST inclusive

Figure 2: The Healthy Streets Indicators

Denis Morgan/ #315.1		Seek Amendment	Given that PC14 emphasises high density within walking distance to key transport routes, HDZ streets (particularly the narrow Merivale streets) should be restricted from all parking to encourage biking and walking, to improve spatial separation around high density residential units, to improve pedestrian and cyclist safety, and reduce emissions to meet the PC14 Objective + Policies. Common sense dictates a proper transport analysis contemporaneously with PC14/MDRS.	
Denis Morgan/315.1	Anne Dingwall/ #FS2037.420	Seek Amendment	Given that PC14 emphasises high density within walking distance to key transport routes, HDZ streets (particularly the narrow Merivale streets) should be restricted from all parking to encourage biking and walking, to improve spatial separation around high density residential units, to improve pedestrian and cyclist safety, and reduce emissions to meet the PC14 Objective + Policies. Common sense dictates a proper transport analysis contemporaneously with PC14/MDRS.	Support

			Chapter 7 Transport. I support the following. Objective 7.2.1 (iv) iv. that reduces dependency on private motor vehicles and promotes the use of public and active transport; Policy 7.2.1.1 (iv) iv. reflecting neighbourhood identity and amenity values. Policy 7.2.1.6 (iii) iii. encouraging the use of travel demand management options that help facilitate the use of public transport, cycling, walking and options to minimise the need to travel. o On-site parking will not be required for residential developments. o Currently in the Merivale/St Albans area parking is chaotic and space at a premium. o My requests to the local councillor and community board for comment on reduced residential amenity values caused by parking remain unanswered. o CCC does not police the restricted parking zones now and an increase in housing density will add to the chaos. o The problem has been caused by the granting of consents for businesses, rest homes, and hospitals without proper traffic management and controls. (A request has been made to CCC for information as to traffic mitigation proposals for a new facility in Mansfield Avenue by Nurse Maud on an existing carpark. So where do the existing cars now park and where do staff and users of the new facility park? Council have not replied). o The increase in hospitals and retirement facilities has increased the size and frequency of service vehicles (increased heavy traffic). o Air B+B operate in the area adding to parking demand. o Currently CCC is investigating speed reduction/safety options within Merivale. Speed is very much an issue in the narrow(ed) streets with parking on both roadsides. o Rules are pointless without enforcement. o CCC has confirmed 37 infringement notices have been issued in Murray Place in the 6 months October 2022 to March 2023. 19 were for parking over the time restriction Allowing a generous 6 weeks for Christmas and other statutory holidays that leaves 20 weeks x 5 days = 100 days to collect 19 infringement notices. That is woeful and reflects Councils control performance. My testimony will be that cars are parked in the restricted zones all day every weekday. The other infringement notices are likely to be for parking too close or over a residential driveway and in these cases the resident must complain first! There is no effective control outside of the Central City for parking management.	
Denis Morgan/ #315.6		Seek Amendment	Given that PC 14 emphasises high density within walking distance to key transport routes, HDZ streets (particularly the narrow Merivale streets) should be restricted from all parking to encourage biking and walking, to improve spatial separation around high density residential units, to improve pedestrian and cyclist safety, and reduce emissions to meet the PC14 Objective + Policies. Common sense dictates a proper transport analysis contemporaneously with PC14/MDRS.

Denis Morgan/ #315.14		Support		
Denis Morgan/ #315.15		Support	Supports Policy 7.2.1.6 (iiii) Supports Policy 7.2.1.6 (iiii)	
Craig Gilmore/ #396.1		Seek Amendment	We are keen to work with the council to provide and get feedback on what can be done to improve the bike parking in order to make it more secure in the central city and promote useage of bikes in the city by medium density city dwellers and others	
John Glennie/ #472.2		Seek Amendment	That the impact of increased traffic on a shared long driveway be added to the list of Qualifying Matters and that the owners of existing houses on the driveway be able to object to the effects.	
Rob Seddon-Smith/ #476.7		Seek Amendment	Consideration should be given to prohibiting on-street parking for residents of larger developments.	
Anne Ott/ #673.1		Seek Amendment	Add a new qualifying matter "traffic impact" - to enable assessment of additional traffic and cars parking on roads due to new developments around the small feeder streets (Cox St, Stirling St, Akela St, Office Rd (especiallyby the Mall), Rugby St (especially off Papanui Rd), Winchester St (by StMargarets), Andover St, Tonbridge St, Rastrick St, Shrewsbury St and MerivaleLane) in Merivale.	
Anne Ott/673.1	Kāinga Ora/ #FS2082.340	Seek Amendment	Add a new qualifying matter "traffic impact" - to enable assessment of additional traffic and cars parking on roads due to new developments around the small feeder streets (Cox St, Stirling St, Akela St, Office Rd (especiallyby the Mall), Rugby St (especially off Papanui Rd), Winchester St (by StMargarets), Andover St, Tonbridge St, Rastrick St, Shrewsbury St and MerivaleLane) in Merivale. "...There is no requirement for parking spaces on site [for new multi-unit housing]. Recent experience with multi unit housing shows these cars will be semi permanently parked on the roads... around Merivale Village... [that are] are much narrower than is normal for Christchurch... These streets do not allow traffic to pass by with cars parked on either side. Some would struggle to allow 1 car to pass with cars parked on both sides. It is no use allowing significant intensification here when the narrow roading infrastructure simply will not support it."	Oppose
David Ott/ #674.10		Seek Amendment	Add a new qualifying matter "traffic impact"- to enable assessment of additional traffic and cars parking on roads due tonew developments around the small feeder streets (Cox St, Stirling St, Akela St, Office Rd (especially by the Mall), RugbySt (especially off Papanui Rd), Winchester St (by St Margarets), Andover St,Tonbridge St, Rastrick St, Shrewsbury St and Merivale Lane) in Merivale.

Foodstuffs/ #705.12		Seek Amendment	Delete, or amend to: a.xi incorporate encourage measures to reduce greenhouse gas emissions from vehicular trips associated with the activity.	
Foodstuffs/705.12	Chapman Tripp/ #FS2063.80	Seek Amendment	Delete, or amend to: a.xi incorporate encourage measures to reduce greenhouse gas emissions from vehicular trips associated with the activity. Benefits do not outweigh the cost of site-specific assessments. Unclear as to what is caught by these provisions.	Support

Foodstuffs/705.12	Chapman Tripp/ #FS2064.77	Seek Amendment	Delete, or amend to: a. xi incorporate encourage measures to reduce greenhouse gas emissions from vehicular trips associated with the activity. Benefits do not outweigh the cost of site-specific assessments. Unclear as to what is caught by these provisions.	Support
Waka Kotahi (NZ Transport Agency) / #805.33		Seek Amendment	Amend the policy as follows: xi. incorporate measures to promote opportunities for safe and efficient travel other than by private vehicles.	
Waka Kotahi (NZ Transport Agency) /805.33	Chapman Tripp/ #FS2063.106	Seek Amendment	Amend the policy as follows: xi. incorporate measures to promote opportunities for safe and efficient travel other than by private vehicles. Waka Kotahi supports the intent of this policy as it is seeking that activities that trigger the high trip generating activities thresholds shall incorporate measures to reduce vehicular trips and associated greenhouse gas emissions. However, the s32 assessment supporting the policy is seeking that these high trip generating activities should incorporate measures to provide for alternative modes of transport, which has the potential reduce reliance on private vehicle use, rather than greenhouse gas emissions specifically. The current proposed policy could result in potential assessment of greenhouse gases, which is not the intended outcomes as per the s32 assessment. It is recommended that the policy be amended to reflect provision for alternate modes transport and to delete reference to greenhouse gas emissions.	Support
Waka Kotahi (NZ Transport Agency) /805.33	Chapman Tripp/ #FS2064.102	Seek Amendment	Amend the policy as follows: xi. incorporate measures to promote opportunities for safe and efficient travel other than by private vehicles. Transport > Objectives and policies > Objective - Integrated transport system for Christchurch District > Policy - Promote public transport and active transport

Submission Number	Further Submission No	Position	Decision Requested	FS Position
Richard Abey-Nesbit/ #3.1		Seek Amendment	Seeks that the Council invests more in the public transport system, beyond what the proposed changes allow for.	
Richard Abey-Nesbit/3.1	Anne Dingwall/ #FS2037.36	Seek Amendment	Seeks that the Council invests more in the public transport system, beyond what the proposed changes allow for. The council needs to move transport infrastructure in a direction that reduces (and eventually eliminates) forced car dependency. All people living in the urban and suburban environment should have the option to not depend on a private car for transport if they so choose.	Support
John Lieswyn/ #170.2		Seek Amendment	That provision point 7.2.1.6 ii. be amended by including that convenient cycle parking encompasses being provided indoors and excludes the provision of hanging bike racks	
Graham Townsend/ #314.2		Support	[Continue to add to the] growing network of cycle/walking tracks across the city and plan for better public transport options.	
Graham Townsend/314.2	Anne Dingwall/ #FS2037.419	Support	[Continue to add to the] growing network of cycle/walking tracks across the city and plan for better public transport options. Communal green space and greater tree cover will both be vital as our climate heats. I strongly applaud the growing network of cycle/walking tracks across the city and especially in the new subdivisions in the wider Halswell area. Planning for better public transport options is a must - we have to get out of our cars	Support
Craig Gilmore/ #396.2		Seek Amendment	We are keen to work with the council to provide and get feedback on what can be done to improve the bike parking in order to make it more secure in the central city and promote useage of bikes in the city by medium density city dwellers and others.	
Rob Seddon-Smith/ #476.3		Not Stated	That Council should guarantee quality public transport options with direct bus routes to all major destinations.	
Christchurch City Council/ #751.23		Seek Amendment	[Amend text to insert "District" with strikethrough]: "requiring new District Town Centres to provide ..."	
Christchurch City Council/751.23	Anne Dingwall/ #FS2037.845	Seek Amendment	[Amend text to insert "District" with strikethrough]: "requiring new District Town Centres to provide ..." The defined term "District Centres" is proposed to be deleted and replaced by "Town Centres" but the word "District" was inadvertently deleted instead of strikethrough.	Support

Mark Darbyshire/ #768.2		Seek Amendment	Increase the number of secure bike parks required for new apartment buildings and new or existing office buildings. Increase security requirements. Ensure the bike parks are suitable for electric bikes (eg horizontal rather than hanging).Require apartment, commercial, and car parking buildings to have EV charging infrastructure.	

Transport > Rules - Transport > Activity status tables - Transport (All zones outside the Specific Purpose (Lyttelton Port) Zone) > Permitted activities

Submission Number	Further Submission No	Position	Decision Requested	FS Position
Christchurch City Council/ #751.24		Seek Amendment	[Amend P18]: Disregard the proposed "Greenfield Precinct" text and instead replace the reference to RNN [with a reference] to FUZ.	
Christchurch City Council/751.24	Anne Dingwall/ #FS2037.846	Seek Amendment	[Amend P18]: Disregard the proposed "Greenfield Precinct" text and instead replace the reference to RNN [with a reference] to FUZ. The RNN zoning that has been proposed to be removed as part of the plan change has been struck out, however the proposed replacement "Greenfield Precinct" is not part of the proposal. The underlying zoning in the area referenced i[s] FUZ, with the rule standard linking to the Outline Development Plan relevant to this area.	Support

Transport > Rules - Transport > Activity status tables - Transport (All zones outside the Specific Purpose (Lyttelton Port) Zone) > Restricted discretionary activities

Submission Number	Further Submission No	Position	Decision Requested	FS Position
John Buckler/ #485.6		Seek Amendment	Change parking on St. Albans Street to residents only parking.	

Transport > Rules - Transport > Standards - Transport (All zones outside the Specific Purpose (Lyttelton Port) Zone)

Submission Number	Further Submission No	Position	Decision Requested	FS Position
Nikki Smetham/ #112.15		Seek Amendment	[Require] Provision for common electric car charging stations on development sites	
Nikki Smetham/112.15	Anne Dingwall/ #FS2037.192	Seek Amendment	[Require] Provision for common electric car charging stations on development sites	Support
David Hood/ #356.3		Seek Amendment	[Require the provision of facilities to charge e-vehicles]	
John Bennett/ #367.6		Seek Amendment	Introduce the requirement to provide secure storage and parking on site for e-transport (bicycles, cars, scooters etc) and the charging of them.	
John Bennett/367.6	Anne Dingwall/ #FS2037.467	Seek Amendment	Introduce the requirement to provide secure storage and parking on site for e-transport (bicycles, cars, scooters etc) and the charging of them. Given that Government and Council are trying to encourage more environmentally sustainable transport, the new rules do not encourage or require provision of secure storage within each housing unit (for bicycles etc) nor to provide off street car parking or garaging so that one can charge their e car, e bike, e scooter or whatever transport mode is developed in the coming years. Given the increasing crime and theft in our city if we want to encourage an uptake of cycling then adequate secure storage for bikes (or other sporting/hobby/gardening equipment) needs to be provided in all housing units.	Support
Lloyd Barclay/ #862.3		Seek Amendment	Seeks that minimum car parking requirements are included for new developments.	

Transport > Rules - Transport > Standards - Transport (All zones outside the Specific Purpose (Lyttelton Port) Zone) > Minimum and maximum number and dimensions of car parking spaces required

Submission Number	Further Submission No	Position	Decision Requested	FS Position
Mary-Anne Thomson/ #9.2		Seek Amendment	Require onsite carparking.	
Mary-Anne Thomson/9.2	Anne Dingwall/ #FS2037.39	Seek Amendment	<p>Require onsite carparking.</p> <p>I bought this property for the location due to my age and having neighbour's close by and am appalled that a 12m high building could be built next door. This would impede our sunlight, privacy and parking would be a nightmare! I absolutely disagree with this plan and feel for everyone this will effect in the future. It is obvious you are trying to get us all out of our cars - cannot see this ever happening so work around it! How you can give consents to these new townhouses with no garages or parking space is a crime for the City! Work for the people of the City, not yourselves and your pockets!!!!</p>	Support
Alastair Grigg/ #28.3		Seek Amendment	[Consider the provision of adequate car parking for residents of high density developments]	
Kelvin Lynn/ #45.1		Seek Amendment	Provide sufficient car parking in the High Density Residential Zone.	
Kelvin Lynn/45.1	Anne Dingwall/ #FS2037.73	Seek Amendment	<p>Provide sufficient car parking in the High Density Residential Zone.</p> <p>How will the proposal to have no parking on major arterial routes such as Papanui Road together work with most high-rise buildings in HDR areas likely to not have garages?</p> <p>Not everyone is going to want to give up their vehicle just because they are on a transport route.</p>	Support
Stephen Walsh/ #58.2		Seek Amendment	[Require more carparking provision]	
Ali McGregor/ #65.1		Seek Amendment	Require off-street parking for residential developments.	
Ali McGregor/65.1	Anne Dingwall/ #FS2037.130	Seek Amendment	Require off-street parking for residential developments. Parking becomes impossible. I live in Bishop Street and the increase in the number of dwellings even now means that there is no parking for visitors in the street. The new townhouses may have one garage only and no off street parking. This has resulted in a most attractive tree-lined street now being choked with cars so that the street has essentially become one way. The solution to this is definitely NOT to remove the trees and get rid of the grassed berm.	Support
Blair McCarthy/ #90.2		Seek Amendment	[That residential developments be required to provide on-site carparking]	
Blair McCarthy/90.2	Anne Dingwall/ #FS2037.164	Seek Amendment	<p>[That residential developments be required to provide on-site carparking]</p> <p>In particular, the proposed change for High Density Residential Zone (HRZ) in a continuous strip parallel to Papanui Road through Strowan, without any requirement for new developments to provide any on-site parking, will place significant additional pressure on basic transport infrastructure such as on-street carparking.</p> <p>Increasingly residents and their visitors will not be able to expect and/or rely on their ability to park close to their place of residence --- [subsequent traffic congestion].</p>	Support
Sally Wihone/ #113.2		Seek Amendment	Provide for accessible parking spaces and wheelchair access along footpaths in residential suburban areas.	
Paul Cary/ #130.2		Seek Amendment	Ensure onsite carparks are required for all new High Density Residential Zone and Medium Density Residential Zone developments.	
Paul Cary/130.2	Anne Dingwall/ #FS2037.202	Seek Amendment	<p>Ensure onsite carparks are required for all new High Density Residential Zone and Medium Density Residential Zone developments.</p> <p>Both Medium Density Residential Zones and High Density Residential Zones do not have a requirement for on-site parking for residents. This will add to the problematic street parking. which is already significant due to the increasing students, teachers, visitors and construction workers associated with the expanding St. Andrews College. The facilities offered by St. Andrews College are all used beyond the 8:30-3:30 school hours.</p>	Support

			Both Medium Density Residential Zones and High Density Residential Zones will contribute to greater traffic congestion, already problematic at the intersections at both ends of Normans Road. Both MRZ and HRZ will bring increased pressure on the local infrastructure and increased stormwater runoff, adding to the flooding which occurs at the north end of College Ave in heavy rain.	
Addington Neighbourhood Association / #205.3		Seek Amendment	Subdivisions should have at least one compulsory car park on each development for deliveries, tradesmen and emergency services .	
Addington Neighbourhood Association /205.3	Anne Dingwall/ #FS2037.295	Seek Amendment	Subdivisions should have at least one compulsory car park on each development for deliveries, tradesmen and emergency services . Subdivisions should have at least one compulsory car park on each development for deliveries, tradesmen and emergency services .	Support

Subdivisions should have at least one compulsory car park on each development for deliveries, tradesmen and emergency services .	Oppose
Pauline McEwen/ #211.3		Seek Amendment	[Provide adequate carparking for residential developments]	
Andrea Floyd/ #239.1		Seek Amendment	[Require on-site carparking for residential units]	
Phil Ainsworth/ #252.2		Seek Amendment	[Require off-street carparking for residential units]	
Chessa Crow/ #294.4		Seek Amendment	Seek to require on-site carparking for residential developments	
Joyce Fraser/ #312.1		Seek Amendment	[Require] off-street parking as a design requirement for new developments.	
Joyce Fraser/312.1	Anne Dingwall/ #FS2037.415	Seek Amendment	[Require] off-street parking as a design requirement for new developments. The submitter would like to see some requirement for developers to provide off-street parking. The people of Ōtautahi are still heavily invested in personal car use and while we might like to dream of an electric vehicle/public transport idyll, this could take some considerable time to achieve. To prevent street parking congestion some practical provision needs to be made in the design requirements.	Support
Joyce Fraser/312.1	Kāinga Ora/ #FS2082.262	Seek Amendment	[Require] off-street parking as a design requirement for new developments. The submitter would like to see some requirement for developers to provide off-street parking. The people of Ōtautahi are still heavily invested in personal car use and while we might like to dream of an electric vehicle/public transport idyll, this could take some considerable time to achieve. To prevent street parking congestion some practical provision needs to be made in the design requirements.	Oppose
Joyce Fraser/ #312.3		Seek Amendment	[Require provision for] EV charging stations as a design requirement for new developments.	
Joyce Fraser/312.3	Anne Dingwall/ #FS2037.417	Seek Amendment	[Require provision for] EV charging stations as a design requirement for new developments. The submitter would like to see some requirement for developers to provide charging stations for EV. The people of Ōtautahi are still heavily invested in personal car use and while we might like to dream of an electric vehicle/public transport idyll, this could take some considerable time to achieve. To prevent street parking congestion some practical provision needs to be made in the design requirements.	Support
Joyce Fraser/312.3	Kāinga Ora/ #FS2082.264	Seek Amendment	[Require provision for] EV charging stations as a design requirement for new developments. The submitter would like to see some requirement for developers to provide charging stations for EV. The people of Ōtautahi are still heavily invested in personal car use and while we might like to dream of an electric vehicle/public transport idyll, this could take some considerable time to achieve. To prevent street parking congestion some practical provision needs to be made in the design requirements.	Oppose
Michael Tyuryutikov/ #334.2		Oppose	Retain existing parking space rules for residential properties.	
Tom King/ #425.8		Oppose	Oppose constructing dwellings without garages to be permitted activities.	
Alex Lowings/ #447.2		Support	That all new properties have a requirement for a minimum of two off-road parking spaces per property.	
David Fisher/ #468.4		Seek Amendment	Oppose increasing building height and density... amend rule to increase parking etc this will potentially attract more families back to these areas.	
Rob Seddon-Smith/ #476.6		Seek Amendment	Consideration should be given to prohibiting on-street parking for residents of larger developments.	
Sydney John Kennedy/ #497.1		Seek Amendment	[Require] All Papanui apartment building sites to have at least 1 car park per apartment on site.	
Sydney John Kennedy/497.1	Anne Dingwall/ #FS2037.498	Seek Amendment	[Require] All Papanui apartment building sites to have at least 1 car park per apartment on site. Council has invested heavily in new Papanui road works which	Support

			have wide footpaths and narrow carriage way. Sometimes the narrow carriage way does not permit 2 way traffic when there is car parking on each side of the carriageway. Encouraging more car parking off site will make local transport more difficult in the narrow carriageway streets.	
Nick Brown/ #585.3		Seek Amendment	[That on-site parking is required to be provided] for new residential housing developments	
Wendy Fergusson/ #654.1		Seek Amendment	Please ensure there is off street parking for every residential building/block	
Keri Murison/ #668.3		Seek Amendment	Require new residential housing development to provide on-site carparking.	
Fire and Emergency/ #842.25		Support	[S]upports the consideration of parking made through the PC14 amendments made to the matter of control 14.15.1 Residential Design Principles.	

Transport > Rules - Transport > Standards - Transport (All zones outside the Specific Purpose (Lyttelton Port) Zone) > Minimum number of cycle parking facilities required

Submission Number	Further Submission No	Position	Decision Requested	FS Position
Rosemary Neave/ #72.5		Seek Amendment	Update regulations to support Council's commitment to mode shift in regard to carbon budgets and encourage people to cycle, specifically to ensure developers provide usable, sensible and accessible bicycle parking in intensive developments. Including by: <ul style="list-style-type: none"> specifying cycle parking facilities that lack adequate security and weather proofing; that hanging bike racks are insufficient as they cannot be used by e-bikes or cargo bikes, or anyone who has difficulty lifting a bike; and cycle parking must be in a location which does not require the cyclist to carry the bike up stairs and/ or through a residential unit. 	
George Booty/ #219.1		Seek Amendment	That bike parking be required to be enclosed and weatherproof, and lockable to prevent theft.	
Joyce Fraser/ #312.2		Support	[Retain] cycle storage as a design requirement for new developments.	
Joyce Fraser/312.2	Waipuna Halswell Hornby Riccarton Community Board/ #FS2027.25	Support	[Retain] cycle storage as a design requirement for new developments. The submitter would also like to see some requirement for developers to provide cycle storage for residents. The people of Ōtautahi are still heavily invested in personal car use and while we might like to dream of an electric vehicle/public transport idyll, this could take some considerable time to achieve. To prevent street parking congestion some practical provision needs to be made in the design requirements.	Support
Joyce Fraser/312.2	Anne Dingwall/ #FS2037.416	Support	[Retain] cycle storage as a design requirement for new developments. The submitter would also like to see some requirement for developers to provide cycle storage for residents. To prevent street parking congestion some practical provision needs to be made in the design requirements.	Oppose
Cynthia Roberts/ #362.11		Seek Amendment	That developers must also provide suitable secure storage for electric bikes.	
Craig Gilmore/ #396.3		Seek Amendment	We are keen to work with the council to provide and get feedback on what can be done to improve the bike parking in order to make it more secure in the central city and promote usage of bikes in the city by medium density city dwellers and others.	
New Zealand Institute of Architects Canterbury Branch/ #762.41		Seek Amendment	[Seeks that] adequate secure storage needs to be provided / allowed for in all housing units / developments.	
New Zealand Institute of Architects Canterbury Branch/762.41	Anne Dingwall/ #FS2037.806	Seek Amendment	[Seeks that] adequate secure storage needs to be provided / allowed for in all housing units / developments. Given that Government and Council are trying to encourage more environmentally sustainable transport, the new rules do not appear to encourage or require provision of secure bicycle storage within each housing unit nor to provide off street car parking or garaging so that one can charge their e car,	Support

			e bike, e scooter or whatever transport mode is developed in the coming years. If the council want to encourage an uptake of cycling then adequate secure storage needs to be provided / allowed for in all housing units / developments.	
New Zealand Institute of Architects Canterbury Branch/762.41	Kāinga Ora/ #FS2082.566	Seek Amendment	[Seeks that] adequate secure storage needs to be provided / allowed for in all housing units / developments. Given that Government and Council are trying to encourage more environmentally sustainable transport, the new rules do not appear to encourage or require provision of secure bicycle storage within each housing unit nor to provide off street car parking or garaging so that one can charge their e car, e bike, e scooter or whatever transport mode is developed in the coming years. If the council want to encourage an uptake of cycling then adequate secure storage needs to be provided / allowed for in all housing units / developments.	Oppose
Anne Scott/ #764.1		Seek Amendment	[That] [t]he council should require accessible, weatherproof and secure storage be provided for bikes and other forms of active transport, including space suitable for e-bikes, cargo and accessibility trikes.	
Anne Scott/764.1	Anne Dingwall/ #FS2037.765	Seek Amendment	[That] [t]he council should require accessible, weatherproof and secure storage be provided for bikes and other forms of active transport, including space suitable for e-bikes, cargo and accessibility trikes. The CCC and the government have a long-standing commitment to invest in and support active transport including cycling. New residential builds no longer provide for car parking particularly in the inner city. Although the District Plan does have bike parking requirements, the current rules mean they are lacking in terms of actually requiring useable, practical and secure bike storage. For example, they allow hanging bike racks, where you have to hoist your bike up on its back tire and hang the front wheel of a high hook. Some cyclists are not physically capable of lifting their bike onto these hooks and it does not work for heavier bikes, regular bikes with a basket, cargo bikes, children's bikes or e-bikes. The current rules don't require bike parking to be indoors and secure, just 'covered' so sometimes developers install a 70cm deep piece of roofing iron jutting out from a wall of the house and call that 'bike parking' even though it's totally visible, inviting theft, and not adequately protecting the bike from weather. Nor do they typically have space for multiple bikes to be locked up, or allow for a diverse range of bikes. The council should require accessible, weatherproof and secure storage be provided for bikes and other forms of active transport, including space suitable for e-bikes, cargo and accessibility trikes. The ability to safely plug in an e-bike should also be provided as some now have in-frame batteries. (NZTA has a document on best practice for bike storage https://www.nzta.govt.nz/resources/cycle-parking-planning-and-design/ although it does have some unsuitable examples such as wall hooks) Residential storage should not require someone to carry the bike through the living areas of the house to access.	Support
Mark Darbyshire/ #768.1		Seek Amendment	Increase the number of resident bike parks required for apartment buildings. Require resident bike parks to be in a secure, indoor location that isn't visible from outside. Require resident bike parks to be suitable for heavy electric bikes (eg horizontal rather than hanging). Monitor apartment developers and inspect apartment buildings upon completion to ensure these requirements are met in newly built complexes. Require all apartment buildings with resident car parks to include EV charging infrastructure that all resident car parks can hook into.

Transport > Appendices > Appendix 7.5.1 Parking space requirements

Submission Number	Further Submission No	Position	Decision Requested	FS Position
Michael Galambos/ #325.1		Seek Amendment	<p>[R]equire:</p> <p>1 - High-Density Residential Zones be required to provide a minimum of one off-street parking space for each unit. These parking spaces should be allocated to a unit and have conduit from the switchboard to the parking space to permit future provision of an EV charger.</p> <p>2 - High-Density Residential Zones be required to provide a lock-up for each unit sufficiently sized to store one e-bike per room. Lock-ups shall have a power supply.</p> <p>3 - Medium-Density Residential Zones be required to provide a single garage for 50% of units.</p> <p>4 - Medium-Density Residential Zones be required to provide a double garage for 25% of units.</p>	
Michael Galambos/325.1	Anne Dingwall/ #FS2037.424	Seek Amendment	<p>[R]equire:</p> <p>1 - High-Density Residential Zones be required to provide a minimum of one off-street parking space for each unit. These parking spaces should be allocated to a unit and have conduit from the switchboard to the parking space to permit future provision of an EV charger.</p> <p>2 - High-Density Residential Zones be required to provide a lock-up for each unit sufficiently sized to store one e-bike per room. Lock-ups shall have a power supply.</p> <p>3 - Medium-Density Residential Zones be required to provide a single garage for 50% of units.</p> <p>4 - Medium-Density Residential Zones be required to provide a double garage for 25% of units.</p> <p>I support the proposed plan change 14. New Zealand is currently experiencing a housing affordability and cost of living crisis. This plan change will facilitate the development of land and provision of additional housing. This aligns with Council's community outcome of "Sufficient supply of, and access to, a range of housing" as stated in the 2021 Long Term Plan. While the plan change aligns with the supply and access to housing I am concerned that we will not get a range of housing. Looking at recent developments in and around the central city, many either 1 - have no provision for off-street parking 2 - have a central car park that is off-street but outdoor with no electrical provision 3 - have a small single garage Unlike large foreign cities Christchurch and New Zealand do not have extensive public transport networks for inter or intra city transport. While peak oil and climate change are likely to change automobile use, many believe that this may be a change to electric vehicles, e-bikes and similar. To support charging of electric vehicles it will be necessary to have off-street parking close enough to residences to permit electrical supply. In addition, given New Zealand's culture of DIY, innovation, sports and the great outdoors, a garage is more than a parking space but can also be a place where people pursue hobbies and store sporting equipment. For these reasons, although I support the plan change, I would like Council to set minimum parking requirements. I suggest that: 1 - High-Density Residential Zones be required to provide a minimum of one off-street parking space for each unit. These parking spaces should be allocated to a unit and have conduit from the switchboard to the parking space to permit future provision of an EV charger. 2 - High-Density Residential Zones be required to provide a lock-up for each unit sufficiently sized to store one e-bike per room. Lock-ups shall have a power supply. 3 - Medium-Density Residential Zones be required to provide a single garage for 50% of units. 4 - Medium-Density Residential Zones be required to provide a double garage for 25% of units.</p>	Support

Mitchell Coll/ #720.8		Seek Amendment	If a garage is provided, it should be of a size that allows for an 85 th percentile car to be parked in it.	

Transport > Appendices > Appendix 7.5.2 Cycle parking facilities

Submission Number	Further Submission No	Position	Decision Requested	FS Position
Meg Christie/ #80.1		Seek Amendment	Amend Appendix 7.5.2 Cycle parking facilities to require future housing developments to provide easy to use, practical and secure cycle parking. This requires the cycle parking to: have sufficient space for multiple bikes and/or larger bikes to be locked up, including electric bikes; be provided indoors and secure; be located on the ground level with no steps; and, exclude the provision of hanging bike racks [that provision is not be changed under changes in PC14].	
John Lieswyn/ #170.4		Seek Amendment	Amend provision point 7.5.2 to be more descriptive to ensure that cycle parking is actually safe, weather protected and convenient. Additionally, spacing and other design criteria from the Cycle parking planning and design guide produced by Waka Kotahi should be referred too.	
Jack Gibbons/ #676.3		Seek Amendment	<ul style="list-style-type: none"> require secured bicycle parking areas specify racks that are able to be used by all people and bicycles 	
Christchurch City Council/ #751.26		Seek Amendment	<ul style="list-style-type: none"> Clause b: remove reference to "residents" cycle parking/parks throughout. Introduce a new clause " e. Cycle parking facilities for residential activities shall be provided as follows:", followed by the detailed requirements for residents cycle parking facilities. Introduce a new "Figure 4 – Minimum cycle parking dimensions for resident cycle parks" Amend line x [in Table 7.5.2.1] "Social housing complex" by: deleting " For developments involving 3 or more residential units"; and adding "private" before the word "garage" in the two following provisions. Amend line aa. [in Table 7.5.2.1] by adding "private" before the word "garage" in both provisions. Add an advice note at the end of the Table [7.5.2.1] clarifying the meaning of "private garage". <p>[Refer to ATTACHMENT 47]</p>	
Christchurch City Council/751.26	Andrew Evans/ #FS2016.2	Seek Amendment	<ul style="list-style-type: none"> Clause b: remove reference to "residents" cycle parking/parks throughout. Introduce a new clause " e. Cycle parking facilities for residential activities shall be provided as follows:", followed by the detailed requirements for residents cycle parking facilities. Introduce a new "Figure 4 – Minimum cycle parking dimensions for resident cycle parks" Amend line x [in Table 7.5.2.1] "Social housing complex" by: deleting " For developments involving 3 or more residential units"; and adding "private" before the word "garage" in the two following provisions. Amend line aa. [in Table 7.5.2.1] by adding "private" before the word "garage" in both provisions. 	Seek Amendment

			<ul style="list-style-type: none"> • Add an advice note at the end of the Table [7.5.2.1] clarifying the meaning of “private garage”. <p>[Refer to ATTACHMENT 47]</p> <p>The introduction of the MDRS combined with the effects of the removal of the minimum requirement for car parking by the NPS UD will facilitate more medium and high-density residential development with pedestrian only access and facilities. This trend is already evident in parts of Christchurch. Cycling as a primary or secondary transport mode in Christchurch is growing significantly. The size and variety of different cycles is also changing with electric bikes and different styles of cargo bikes now readily available and growing in popularity. Where residents are less likely to have cars, it is important for alternative transport modes like cycling to be practical and convenient.</p> <p>However, a range of issues is emerging with the cycle parking being provided under the current District Plan provisions. These include: inadequate security and weather proofing; hanging bike racks which cannot be used by e-bikes or cargo bikes; and cycle parking provided in a location which requires the cyclist to carry their bike. This submission seeks to increase the standard of cycle parks provided where residents do not have a private garage for cycle storage. The new standards will ensure cycle parking is weatherproof and secure, is in an easily accessible location, and that the stands provided enable cycle owners to use a secure lock.</p> <p>The submission also seeks to remove a change made in PC14 to the number of cycle parks required for social housing complexes. PC14 introduced a 3-unit threshold before cycle parking is required for social housing residential units. This is inconsistent with the requirements for other residential units, and the Council seeks to remove this threshold.</p>

The section 32 report for transport notes some of the issues raised by FENZ and others in relation to fire-related access, specifically access width and the application of the hose length requirements. In consultation with FENZ, a new diagram has been drafted to address this issue, including the application of multi-unit or infill development, and a new access width has been proposed.

New Zealand Institute of Architects Canterbury Branch/ #762.15		Seek Amendment	[In relation to Table 7.5.7.1] That the increase in minimum driveway widths from 2.7 to 3m, and other minimum formed widths will be reviewed based upon the scale of the development, where carparking is ideally situated on site, and consideration for pedestrian and vegetation corridors throughout a site and the clause in question to be amended.	
New Zealand Institute of Architects Canterbury Branch/762.15	Anne Dingwall/ #FS2037.780	Seek Amendment	[In relation to Table 7.5.7.1] That the increase in minimum driveway widths from 2.7 to 3m, and other minimum formed widths will be reviewed based upon the scale of the development, where carparking is ideally situated on site, and consideration for pedestrian and vegetation corridors throughout a site and the clause in question to be amended. We query the increase in minimum driveway widths from 2.7 to 3m, and other minimum formed widths these would result in larger driveways and cause undesirable effects on the streetscape, in some areas resulting in reduced density along a street front. Further consideration needs to be given to this rule and assessed based upon the scale of the development, where carparking is ideally situated on site, and consideration for pedestrian and vegetation corridors throughout a site. We ask that this be reviewed in detail and clause amended.	Support

Fire and Emergency/ #842.15		Seek Amendment	<p>Fire and Emergency support in part:</p> <ul style="list-style-type: none"> 7.5.7(a) – that requires all vehicle access to and within a site to be in accordance with the standards set out in Table 7.5.7.1, subject to the relief sought in Table 7.5.7.1. 7.5.7(b) - to the extent that provision of passing bays may provide a hardstand area for fire appliances to operate in scenarios where vehicle accessways exceed 50m. 7.5.7(c) – to the extent that it requires either a combined vehicle-pedestrian access or a dedicated pedestrian access with associated minimum standards. Fire and Emergency request that these minimum standards be amended to provide for emergency responder access for reasons set out in Section 1.3.1 above. 7.5.7(h) – to the extent that it considers vehicle access for firefighting where a building is either located outside of a reticulated area, or further than 75m from the nearest road that is fully reticulated. This sets a minimum formed width of 3.5m and a height clearance of 4m. Section 1.3.2 of this submission sets out the minimum requirements for fire appliance access which includes a minimum of 4m vehicle access width in order to enable Fire and Emergency personnel to manoeuvre around the vehicle in an emergency. Correspondence with CCC post notification regarding Appendix 7.5.7(h) indicated that proposed changes to this clause were omitted from notification in error. Amendments are sought regarding this clause to provide sufficient access for emergency appliances. 7.5.7(n) – to the extent that it sets maximum gradients for vehicle accesses. Fire and Emergency further request amendments to the 7.5.7(n) as per relief.

Seek Amendment

Amend as follows: Table 7.5.7.1 – Minimum requirement for private ways and vehicle access:

	Activity	Minimum formed width (metres)	Central City height clearance (metres)
a.	Residential activity and offices	3.0	3.5 4.0
b.	Residential activity and offices	3.0	4.0

Advice note: For any buildings that are greater than 75m from the road, Appendix 7.5.7 Access, gradient and design clause h is applicable.

Fire and Emergency/842.17

Kāinga Ora/ #FS2082.763

Seek Amendment

Amend as follows: Table 7.5.7.1 – Minimum requirement for private ways and vehicle access:

	Activity	Minimum formed width (metres)	Central City height clearance (metres)
a.	Residential activity and offices	3.0	3.5 4.0
b.	Residential activity and offices	3.0	4.0

Advice note: For any buildings that are greater than 75m from the road, Appendix 7.5.7 Access, gradient and design clause h is applicable.

Fire and Emergency require a minimum formed access width of 4m for emergency vehicles and a minimum 4m height clearance to be able to effectively and efficiently access sites with their fire appliances. It is noted that Appendix 7.5.7(h) requires a minimum access width of 4m where an accessway exceeds 75m (as per proposed new Figure 7A above). This is in acknowledgment that where accessways do not exceed 75m, Fire and Emergency should be able to operate from the road. The proposed minimum formed width for Table 7.5.7.1 a. and b. requires a 3.0m minimum formed width. While it would be Fire and Emergency's preference that Fire and Emergency are able to access all properties with their vehicles, Fire and Emergency support the 3m width that applies to residential activity and offices in recognition that medium and high-density zones result in a

Oppose

			<p>more compact environment. However, this support is subject to these buildings being no more than 75m from the road and that the relief sought in Appendix 7.5.7(h) is accepted in order to manage risk relating to emergency service access in the medium and high-density environments. The height clearance of 3.5m in a. would significantly impact the ability of emergency responders to provide effective and efficient assistance and therefore seek that this be increased to 4m in line with the SNZ PAS 4509:2008. Without the changes recommended above, assessment of non-compliance with this standard against matters of discretion is challenging as the permitted baseline is already insufficient.</p> <p>Amend as follows: Table 7.5.7.1 – Minimum requirement for private ways and vehicle access:</p> <table border="1"> <thead> <tr> <th>Activity</th> <th>Minimum formed width (metres)</th> <th>Central City height clearance (metres)</th> </tr> </thead> <tbody> <tr> <td>a. Gavin Keats/ #52.2		Seek Amendment	Development should only be provided for when services such as power, waste and storm water are upgraded.	

Gavin Keats/52.2	Anne Dingwall/ #FS2037.82	Seek Amendment	Development should only be provided for when services such as power, waste and storm water are upgraded. The changes proposed to the government's plan by the Christchurch City Council do not go far enough for the following reasons: 1. more allowance needs to be made for Christchurch being a drained swamp, and prone to flooding. 2. more reference needs to be made to how the cost of upgrading sewer and storm water is to be paid for every time a building consent is issued that means higher density. I am pleased that CCC is trying really hard to improve things for Christchurch. As the rebuild progresses we have such a lovely liveable, walkable, and bikeable city, it is such a shame if government rules mean developers can push the council into approving poor housing design.	Support
Nikki Smetham/ #112.10		Support	[Retain provisions requiring that Crime Prevention Through Environmental Design (CPTED) principles are considered and complied with]	
Nikki Smetham/112.10	Anne Dingwall/ #FS2037.190	Support	[Retain provisions requiring that Crime Prevention Through Environmental Design (CPTED) principles are considered and complied with] In general we are in full support for the proposed Qualifying Standards to Chapter 14 Residential including compliance with CPTED issues. Mitchell Cocking/ #207.5		Oppose	Reject the plan change	
Sarah Flynn/ #310.1		Seek Amendment	[Insert provisions to encourage the retention and recycling of materials from demolished buildings]	
Sarah Flynn/310.1	Anne Dingwall/ #FS2037.414	Seek Amendment	[Insert provisions to encourage the retention and recycling of materials from demolished buildings] My other concern is the waste and pollution which we are supposed to be addressing. Where are all these perfectly good, and often beautiful houses going? Landfill? I recently watched a large villa be demolished in a very short space of time - beautiful rimu floors and window frames smashed to bits. These houses are actually beautiful, made from resources we should/can no longer use (native woods etc), but we are throwing them away. It is immoral and wasteful.	Support
Denis Morgan/ #315.7		Seek Amendment	Any subdivision of Lot 3 DP27773 is restricted to no more than one residential unit accessing easement 192726.	
Denis Morgan/ #315.8		Seek Amendment	That a subdivision creating 18 residential units is outside the scope of PC14 and not inkeeping with neighbourhood amenity values of 48 Murray Place, Merivale.	
Denis Morgan/315.8	Anne Dingwall/ #FS2037.423	Seek Amendment	That a subdivision creating 18 residential units is outside the scope of PC14 and not inkeeping with neighbourhood amenity values of 48 Murray Place, Merivale. If redeveloped pursuant to PC 14, the possibility is for 18 residential units to use the narrow ROW to the north – a mini highway for vehicles or pedestrians. Although streamsetback might restrict some development, it is possible all 3 sections being halved totalling 6 allotments X 3 residential units each = 18 residential units using the ROW. A worse case is amalgamation of titles with CCC granting discretion for more than 18 units without notification.	Support

Robert J Manthei/ #200.14		Seek Amendment	Stop enabling Greenfield developments	

Robert J Manthei/200.14	Anne Dingwall/ #FS2037.292	Seek Amendment	<p>Stop enabling Greendfield developments</p> <p>little is being done to stop the outward spread of large, resource-expensive housing developments on the fringes of Christchurch. These two initiatives(densification within the City and the proliferation of greenfield developments on thefringes) work against one another, with the second cancelling out many of the assumed social, economic and infrastructure benefits accruing from the first. This situation does not make any planning sense.</p> <p>Based on market evidence, there is good reason to stop the 'developer-driven gravy train' of greenfield developments: "...the suburbs that are located closer to the city with good amenity are currently experiencing medium density infill development." (From: New Medium Density Residential Standards (MDRS) Assessment of Housing Enabled, January, 2022, p.37). This assessment reported that MDRS "...will become enabled in the majority of the cities residential areas, creating an estimated 'plan enabled' capacity of 222,478 medium density dwellings". These dwelling will occur particularly "...in those catchments that are generally one suburb back from the city in areas with good accessibility and amenity. (Ibid, p.39) In other words, there is no 'need' for more greenfield developments under the densification initiative.</p>	Support
Plain and Simple Ltd/ #627.2		Seek Amendment	[T]hat the objectives within PC 14 are amended to explicitly include recognition of the role of housing in fostering social cohesion and a sense of community belonging.

Kāinga Ora – Homes and Communities / #834.116		Oppose	Delete Section 6.10A and all associated provisions.	
Kāinga Ora – Homes and Communities /834.116	Catholic Diocese of Christchurch/ #FS2044.81	Oppose	Delete Section 6.10A and all associated provisions. Kāinga Ora welcomes the Council’s recognition of trees as a key element in successful urban environments. Kāinga Ora strongly support the Council increasing its prioritisation of the need to renew streetscapes, especially in areas where intensification has and will continue to occur. Such renewals should include kerb and channel replacement, undergrounding of overhead wires, and street tree planting. Kāinga Ora has substantial concerns with the 20% tree canopy cover target and considers it fundamentally unachievable in medium and high density environments on private land. Kāinga Ora consider the requirements to achieve 20% tree canopy cover is inconsistent with the spatial outcome requirements set out in the NPS-UD, and the Medium Density Residential Standard (MDRS) provisions of the Housing Supply Act. Kāinga Ora considers that the proposed financial contribution calculator is complicated and flawed, a simpler formula would be to require 1 tree to be planted per 100m2 of site area, as an easier compliance threshold than a trigger of 10% of future canopy cover. It also has concerns with the reliance on Financial Contributions. Given that Council already own extensive areas of park and open space land (including several thousand hectares of land on the Port Hills and Red Zone), in addition to extensive road reserve and local park areas, and given that Council takes Development Contributions for new parkland as part of any new development, the need for the land component to form part of the financial contributions appears to be particularly hard to justify. The need to provide rapid canopy cover potentially creates a perverse incentive to plant faster growing exotic species rather than natives. The proposed Financial Contribution could therefore result in a decline in biodiversity by driving developers to plant exotics over natives, with attendant adverse biodiversity outcomes, which is contrary of the desire in the Urban Forest Plan to seek diversity in tree species.	Support

Kāinga Ora – Homes and Communities / #834.117		Oppose	Delete Section 6.10A and all associated provisions.					
Kāinga Ora – Homes and Communities /834.117	Catholic Diocese of Christchurch/ #FS2044.82	Oppose	Delete Section 6.10A and all associated provisions. Kāinga Ora welcomes the Council’s recognition of trees as a key element in successful urban environments. Kāinga Ora strongly support the Council increasing its prioritisation of the need to renew streetscapes, especially in areas where intensification has and will continue to occur. Such renewals should include kerb and channel replacement, undergrounding of overhead wires, and street tree planting. Kāinga Ora has substantial concerns with the 20% tree canopy cover target and considers it fundamentally unachievable in medium and high density environments on private land. Kāinga Ora consider the requirements to achieve 20% tree canopy cover is inconsistent with the spatial outcome requirements set out in the NPS-UD, and the Medium Density Residential Standard (MDRS) provisions of the Housing Supply Act. Kāinga Ora considers that the proposed financial contribution calculator is complicated and flawed, a simpler formula would be to require 1 tree to be planted per 100m2 of site area, as an easier compliance threshold than a trigger of 10% of future canopy cover. It also has concerns with the reliance on Financial Contributions. Given that Council already own extensive areas of park and open space land (including several thousand hectares of land on the Port Hills and Red Zone), in addition to extensive road reserve and local park areas, and given that Council takes Development Contributions for new parkland as part of any new development, the need for the land component to form part of the financial contributions appears to be particularly hard to justify. The need to provide rapid canopy cover potentially creates a perverse incentive to plant faster growing exotic species rather than natives. The proposed Financial Contribution could therefore result in a decline in biodiversity by driving developers to plant exotics over natives, with attendant adverse biodiversity outcomes, which is contrary of the desire in the Urban Forest Plan to seek diversity in tree species.	Support

In High Density Zone – 400m2.	300m2 proposed for the High Density Residential Zone									
Ann-Mary & Andrew Benton/ #698.5		Seek Amendment	<p>In recognition of the status of a Qualifying Matter, we propose introducing a resource consent requirement as a restricted discretionary activity, to help us better protect Character Areas. While some infill development will be allowed, we will have more ability to decline a resource consent where the design of a new house, or changes to an existing house, aren't in keeping with the Character Area.</p> <p>Subdivision will also be more restrictive, depending on the zone and area. For example, within a certain Character Area an additional house may be allowed on an existing site, or to the rear on a new site, but it may be limited to between five and eight metres (one or two storeys, depending on building design). It may require a larger garden and existing trees to be retained, with the house or houses set further back from the street and other boundaries than would be allowed for in a general suburban area.</p> <p>Rules for the Character Areas will differ depending on the character values of each area, as well as the District Plan zone in which the character area is located. The character values that are already being used to assess any development designs submitted to us are proposed to remain the same.</p> <p>Proposed Rules (Medium Density Residential Zone)</p> <table border="1"> <thead> <tr> <th>Activity Status</th> <th>Activity within a Character Area Overlay</th> <th>Activity if not in a Character Area Overlay</th> </tr> </thead> <tbody> <tr> <td>Permitted</td> <td>Within any Character Area Overlay, the interior conversion of an existing</td> <td>No equivalent rule – no density limit</td> </tr> </tbody> </table>	Activity Status	Activity within a Character Area Overlay	Activity if not in a Character Area Overlay	Permitted	Within any Character Area Overlay, the interior conversion of an existing	No equivalent rule – no density limit	
Activity Status	Activity within a Character Area Overlay	Activity if not in a Character Area Overlay								
Permitted	Within any Character Area Overlay, the interior conversion of an existing	No equivalent rule – no density limit								

				residential unit into two residential units.	
			Controlled	<p>In a Character Area Overlay,</p> <p>a. The erection of new residential unit to the rear of an existing residential unit on the same site, where it is:</p> <p>i. less than 5 metres in height; and</p> <p>ii. meets the built form standards applicable to the Character Area Overlay within which it is located.</p> <p>b. Any application arising from this rule shall not be limited or publicly notified.</p>	
			Restricted Discretionary	Residential units in the Character Area Overlay that do not meet Rule 14.5.3.2.7 – Number of residential units per site – maximum of 2 residential units per site.	No density limit.
			Restricted Discretionary	Within a Character Area Overlay:	

a. The demolition or removal of a building greater than 30m² on the site, relocation of a building onto the site, erection of new buildings and alterations or additions to existing buildings, accessory buildings, fences and walls associated with that development.

b. This rule does not apply:

i. where 14.5.3.1.2 C1 applies.

ii. to fences that meet the applicable built form standard 14.5.3.2.12 for that Character Area;

iii. to accessory buildings that are less than 30m² and located to the rear of the main residential unit on the site and are less than 5 metres in height; iv. to fences that are located on a side or rear boundary of

			<p>the site, except where that boundary is adjacent to a public space.</p> <p>c. Activities that do not meet Built Form standard 14.5.3.2.6. d. Any application arising from this rule shall not be limited or publicly notified.</p>		
			<p>Building height controls (dependent on the area, but the current Character Areas have 7m and 5.5 height limits proposed)</p>	<p>In most places, 11 metres</p>	
			<p>Character Areas have a range of other special limits on built form, dependent on the values of that particular Character Area, including:</p> <ul style="list-style-type: none"> - the width of building frontages - landscaping - setbacks (larger than typical) - building coverage 		

	<ul style="list-style-type: none"> - outdoor living space requirements - minimum glazing facing the street - fencing - garaging and car ports - building separation <p>Generally the built form requirements are stricter than the underlying zoning would otherwise allow.</p> <p>If these rules are not met, resource consent is needed (restricted discretionary activity status).</p>	

Proposed Subdivision Rules

	Activity within a Character Area Overlay	Activity if not in a Character Area Overlay

Heritage New Zealand Pouhere Taonga (HNZPT) / #193.8		Support	Retain the increased minimum net site area for the Heritage Areas as proposed	
Heritage New Zealand Pouhere Taonga (HNZPT) /193.8	Anne Dingwall/ #FS2037.274	Support	Retain the increased minimum net site area for the Heritage Areas as proposed HNZPT supports the increased minimum net site area for the Heritage Areas specified under additional standards. This reflects a level of assessment resulting in a lot size appropriate to the character and significance of the area.	Support
Lauren Roberts/ #209.2		Seek Amendment	Provide for more flexibility on allotment sizes.	
Property Council New Zealand/ #242.6		Support	Support the proposed plan change having minimum subdivision on vacant sites in medium density residential zones as 400m ² , and in high density residential zones as 300m ² .	
Property Council New Zealand/ #242.8		Support	The current commercial centre subdivision proposal is for status quo which we also support.	
Cashmere Developments Ltd/ #257.1		Seek Amendment	<p>Remove the maximum number of residential allotment standards set out in Rules 8.6.1 and 8.6.11 that apply to the Outline Development Plan 'Cashmere and Worsleys'.</p> <p>Plan Change 14 proposes to continue to apply Rules 8.6.1 and 8.6.11, even though Plan Change 14 rezones the majority of the undeveloped residential land within 'Cashmere and Worsleys' as Future Urban Zone.</p> <p>The standards proposed to be removed are shown with strikethrough below:</p> <p>Rule 6.8.1 Minimum Net Site Area and Dimension, Table 1: Minimum net site area - residential zones, a. Medium Density Residential Zone:</p> <p>Additional Standards:</p> <ul style="list-style-type: none"> • <i>b. In the Cashmere and Worsleys area (shown at Appendix 8.10.7 8.10.6):</i> <ul style="list-style-type: none"> • <i>i. no more than 380 residential allotments shall be created or enabled by subdivision.</i> • <i>ii. No more than 380 residential units shall be created or enabled by subdivision.</i> • <i>c. The historic stonewalled drain shown at Appendix 8.10.6(d) shall be protected.</i> <p>Rule 8.6.11: Additional Standards for the Future Urban Zone, Table 8: Minimum and Maximum net site areas for allotments, c. Within the Cashmere and Worsleys area (Appendix 8.10.6):</p> <p>Net Site Area:</p> <ul style="list-style-type: none"> • <i>a. No more than 380 residential allotments shall be created or enabled by subdivision;</i> • <i>b. No more than 380 residential units shall be created or enabled by subdivision.</i> • <i>c. The historic stonewalled drain shown at Appendix 8.10.6(d) shall be protected.</i> 	
Caitriona Cameron/ #272.2		Seek Amendment	The proposal should facilitate coherent residential planning, rather than allow a solely market-driven approach (which risks 'lowest common denominator' development). Specifically increase minimum plot sizes for plots with 3+ storey residential buildings	
Caitriona Cameron/272.2	Anne Dingwall/ #FS2037.386	Seek Amendment	<p>The proposal should facilitate coherent residential planning, rather than allow a solely market-driven approach (which risks 'lowest common denominator' development). Specifically increase minimum plot sizes for plots with 3+ storey residential buildings</p> <p>To ensure more coherent 'planned' housing development.</p> <p>The current proposal marks a significant change in what is permitted and encouraged in residential areas. The proposal talks about meeting housing need over a 30 year time frame. The vision for 30 years' time may be coherent but, without careful local planning and oversight, the</p>	Support

			streetscapes are likely to be unattractive and highly variable in the short to medium term, with piece-meal development leading to 'sawtooth' streetscapes. The 30 year time frame outlined in the proposal means there is time to do this well - there is no rush.	
Cody Cooper/ #289.2		Seek Amendment	Amend the minimum section size to be less than as currently proposed.	
Rebecca West/ #360.2		Seek Amendment	Increase the minimum land size, and minimum street facing site dimension [in the High Density Residential Zone]	
Kate Gregg/ #381.22		Seek Amendment	[That the] minimum net site area for subdivision varies between Character Areas in the Medium Density Zone, but is generally larger than the underlying Zone requirement.	
Kate Gregg/ #381.23		Support	[That], for activities located outside a Character Area, the net site area standards [are] amended to a minimum of 400m ² .	
Stuart Roberts/ #465.5		Oppose	[Do not allow 400m ² for MRZ (a)] - Minimum subdivisible section size at 450 sqm for MRZ and current (not proposed) size for HRZ	
David McLauchlan/ #653.7		Seek Amendment	Set a minimum net site area standard for developments [e.g., 2,000m ²] that allows for permanent and larger green space areas.	
Andrew McCarthy/ #681.5		Seek Amendment	[Table 1.b. Medium Density Residential Zone - Residential Hills Precinct] That the minimum allotment size is reduced to 575m ² .	
Andrew McCarthy/681.5	Red Spur Ltd/ #FS2068.46	Seek Amendment	[Table 1.b. Medium Density Residential Zone - Residential Hills Precinct] That the minimum allotment size is reduced to 575m ² . [I]t is clear that the intention of the Act is to allow more dwellings per hectare than was previously allowed. Council has recognised and given effect to this in the MRDZ by shrinking the minimum allotment size from 450m ² (the current minimum lot size) to 400m ² (in the MDRZ) per the addition of this standard in Table 1 of Rule 8.6.1. This is a reduction from the standard minimum area of some 11%. No such reduction, however, has been applied to the MDRZ (Residential Hills Precinct). An identical reduction would reduce the minimum vacant allotment size to 578m ² on the hills. It is submitted that 575m ² would be appropriate new standard, even though this minimum is still much larger than the flat land equivalent, without obvious justification. This change is sensible and necessary to give effect to the Act's intent, whether or not the LPTAQM is retained in any form.	Support
Andrew McCarthy/681.5	Rachel Sanders/ #FS2074.5	Seek Amendment	[Table 1.b. Medium Density Residential Zone - Residential Hills Precinct] That the minimum allotment size is reduced to 575m ² . [I]t is clear that the intention of the Act is to allow more dwellings per hectare than was previously allowed. Council has recognised and given effect to this in the MRDZ by shrinking the minimum allotment size from 450m ² (the current minimum lot size) to 400m ² (in the MDRZ) per the addition of this standard in Table 1 of Rule 8.6.1. Andrew McCarthy/ #681.7		Seek Amendment	Delete Table 1.b. Additional Standards, c. i and ii [minimum building area and curtilage area]	
Andrew McCarthy/681.7	Red Spur Ltd/ #FS2068.48	Seek Amendment	<p>Delete Table 1.b. Additional Standards, c. i and ii [minimum building area and curtilage area]</p> <p>[T]he proposed rules that require a minimum identified building area of 100m², minimum curtilage area of 200m², and vacant lot dimensions all work to restrict intensification in ways that preclude perfectly sensible intensification and thus fail to achieve the purpose of the Act. For example, if a 3 storey apartment were to be built with a minimum building footprint of 100m², this would typically create a very large 300m² apartment. The market for 300m² apartments is tiny, and thus the proposed rule is having effects that effectively preclude intensification.</p> <p>[R]equiring new developments to have 200m² curtilage area further restricts development. Even if minimum vacant allotment size is maintained at 650m², a combination of 100m² minimum building area and 200m² curtilage area effectively means minimum 300m² per building. Thus it would not be possible to fit the 3 properties per site specified in the Act (Schedule 3A, Part 1(10)) on the (rather large) minimum site size of 650m² as a total of 900m² would be required to meet the new rules.</p>	Oppose
Andrew McCarthy/681.7	Rachel Sanders/ #FS2074.7	Seek Amendment	<p>Delete Table 1.b. Red Spur Ltd /881.6	Fiona Aston/ #FS2089.9	Seek Amendment	<p>[Seeks that council amend Rule 8.6.1 to read as follows]</p> <p>(Amendments sought highlighted yellow)</p> <p>In the Residential Hills/Medium Density Residential Zone – Residential Hills Precinct, the minimum net site area should be;</p> <p>650m² for a vacant allotment except that in the Residential Hills (Redmund Spur) Precinct, a maximum of 15% of vacant lots for the entire Precinct shall have a minimum lot size of 400m²</p> <p>1) The relief sought is consistent with and gives effect to the Resource Management Act 1991 (RMA), including the Enabling Housing (and other matters) amendments, and in terms of s32 of the RMA is the most appropriate way for achieving the purpose of the objectives of the proposal (including any consequential amendments to the same to give effect to the purpose and intent of this submission).</p>	Support

			<p>2) Redmund Spur is zoned RH in the current operative Christchurch District Plan. The Enabling Act requires all existing zones except LLR and SSZ to incorporate the MDRS. The proposal to 'downzone' Redmund Spur to LLR is contrary to the Enabling Act and not legally possible. There is simply no scope under the Act for the proposed downzoning.</p> <p>3) The existing District Plan density provisions applying to the Redmund Spur Overlay enable an overall residential density 'closer' to the RH zoning applying elsewhere (minimum lot size 650m²) than the LLR zone (minimum lot size 1500m²). The average lot size based on a maximum of 400 lots, and minimum 30% 1500m² is approx 900m².</p> <p>4) RH zoning for Redmund Spur (in the event that the LPTA QM is retained) is consistent with the proposed RH zoning for the neighbouring Quarry Hill subdivision to the west, which also has an overall lower average density (1500m²) than Redmund Spur (approx 900m²).</p> <p>5) The topography of Redmund Spur includes large areas of gently sloping land which are suitable for some smaller lots. The existing operative RS Mixed Density Overlay rules package recognizes this and anticipates some smaller sites. A higher (45%) site coverage applies for smaller sites (under 450m²) - Rule 14.7.2.3 Site Coverage. Provision for smaller lots will enable this emerging hill suburb to deliver a wider range housing types and price points than other hills suburbs (where the minimum vacant lot size is 650m²), consistent with the NPS-UD 2020 requirement for well functioning urban environments to meet the needs, in terms of type, price, and location, of different households (Policy 1), including smaller, more affordable housing.</p> <p>6) The amendments to the residential zone boundaries are minor in nature and ensure that the zoning better fits the site topography than the existing zone boundaries which relate to existing fence lines and/or other non-topographical features. Land currently zoned Residential Hills but which is topographically unsuitable for residential development will be rezoned Rural Port Hills (2960m²) and land currently zoned RPH but which is suitable for residential development will be rezoned RH (Redmund Spur Precinct) or MDR (Redmund Spur Precinct) (2100m²) slightly reducing the amount of land zoned for residential purposes.</p> <p>7) The amendments to the NCZ boundary and Table 15.1 is consistent with the approved Stage 6 subdivision scheme plan, and the location of the NCZ approved under RMA/2022/2892.</p> <p>8) There is no need to continue with the current RH MDO rules package, which in some parts is inconsistent with the Enabling Act. These include the requirement for a proportion of larger lots and site coverage requirements including as below:</p> <ul style="list-style-type: none"> • For sites greater than 1000m² – the lesser of 25% or 250m² of ground floor area to a maximum of 350m² in total floor area (Rule 14.7.2.3) • Restricted discretionary activity consent required for attached residential units where the total floor area is greater than 500m² (RD21) <p>The site coverage requirements for larger sites have proven problematic in practice, with variable interpretation and application by consenting officers concerning matters of visual appropriateness of site coverage on the larger lots. The maximum site coverage under the MDRS is 50% as stipulated in the Enabling Act, and 35% in the current operative RHZ. It is not appropriate that a different standard apply to development at Redmund Spur compared with other RH zoned areas (with respect to sites 650m² and larger). Further, the Enabling Act (Policy 6) anticipates changes to character of the urban environment with the proposed intensification, which applies to virtually all residential zones including RH. Such changes are not to be considered of themselves an adverse effect, which needs mitigation.</p> <p>Policy 6: When making planning decisions that affect urban environments, decision-makers have particular regard to the following matters:</p> <p>(b) that the planned urban built form in those RMA planning documents may involve significant changes to an area, and those changes:</p> <p>(i) may detract from amenity values appreciated by some people but improve amenity values appreciated by other people, communities, and future generations, including by providing increased and varied housing densities and types; and</p> <p>(ii) are not, of themselves, an adverse effect</p> <p>9) Market feedback is that lot sizes of 1500m²+ are larger than desired</p> <p>10) The current District Plan RH zoning of Redmund Spur (to apply in the event that the LPTA QM is not retained) is consistent with the purpose and intent of the RHZ as described in the District Plan under Policy 14.2.2.1 Housing distribution and density Table 14.2.1.1a, and conversely inconsistent with the purpose of LLR as described in the Table.</p>	
--	--	--	--	--

			<p>Residential Hills Zone</p> <p>Covers all the living environments that are located on the slopes of the Port Hills from Westmorland in the west to Scarborough in the east. (an amendment is sought to correct this to reference Quarry Hill as the westernmost RHZ). It provides principally for low density residential development that recognises the landscape values of the Port Hills, including opportunities for planting and landscaping, and control of reflectivity of roof finishes in order to blend buildings into the landscape. Provision is made for a range of housing options that will enable a typical family home to be retained, but also provide greater housing stock for dependent relatives, rental accommodation, and homes more suitable for smaller households (including older persons). Provision is also made for a range of appropriate non-residential activities.</p> <p>Residential Large Lot Zone</p> <p>Covers a number of areas on the Port Hills where there is an existing residential settlement that has a predominantly low density or semi-rural character as well as the Akaroa Hills slopes and rural residential areas of Samarang Bay and Allandale on Banks Peninsula, and a low density hamlet centred on the northern part of Gardiners Road, Redmund Spur, and 86 Bridle Path Road.</p> <p>The RLLZs are discrete outlying residential areas on Banks Peninsula or in the rural area north of the city (Gardiners Road). Bridle Path Road has subdivision approval and is being developed as a mixed density area (10 lots). Redmund Spur is not an outlying area – it is a Port Hills hill suburb sandwiched between two existing RH hill suburbs (Westmorland to the east and Quarry Hill to the west). RH/RMD (Redmund Spur Precinct) zoning is consistent with this setting and context.</p> <p>11) LLR zoning of Redmund Spur is inconsistent with the purpose and intent of LLR zoning as specified in the national planning standards:</p> <p>LLR Areas used predominantly for residential activities and buildings such as detached houses on lots larger than those of the Low density residential and General residential zones, and where there are particular landscape characteristics, physical limitations or other constraints to more intensive development.</p> <p>The current development with average lot sizes of around 900m² is not low density. There are few physical limitations or constraints to development of RHZ areas on the balance of the site.</p> <p>Significant parts of Redmund Spur are well suited to more intensive development, as reflected in the current MDO rules which anticipate higher density development.</p> <p>12) MDR zoning of Redmund Spur is consistent with the Intensification objectives and policies that the Enabling Act required to be included in the District Plan in particular</p> <p>Objective 1</p> <p>(a) a well-functioning urban environment that enables all people and communities to provide for their social, economic, and cultural wellbeing, and for their health and safety, now and into the future:</p> <p>Objective 2</p> <p>(b) a relevant residential zone provides for a variety of housing types and sizes that respond to—</p> <p>(i) housing needs and demand; and</p> <p>(ii) the neighbourhood's planned urban built character, including 3-storey buildings.</p> <p>(2) A territorial authority must include the following policies in its district plan:</p> <p>Policy 1</p> <p>(a) enable a variety of housing types with a mix of densities within the zone, including 3-storey attached and detached dwellings, and low-rise apartments:</p>	
--	--	--	--	--

			<p>Policy 2</p> <p>(b) apply the MDRS across all relevant residential zones in the district plan except in circumstances where a qualifying matter is relevant (including matters of significance such as historic heritage and the relationship of Māori and their culture and traditions with their ancestral lands, water, sites, wāhi tapu, and other taonga):</p> <p>13) Amended Rule 5.6.1.1 P21 will retain the status quo with respect to the approved zoning of the proposed Redmund Spur neighbourhood centre. The next development stage (Stage 6) will include the neighbourhood centre, which is currently being designed.</p>	
Red Spur Ltd / #881.7		Seek Amendment	<p>[Seeks that council amend Rule 8.6.1(h) as follows]</p> <p>(Amendments sought highlighted yellow)</p> <p>Additional standards</p> <p>e. In the Residential Mixed Density Precinct – Redmund Spur:</p> <p>i. the minimum allotment size shall be 650m², however a minimum of 30% of sites shall have a minimum of 1,500m²; and</p> <p>ii. the maximum number of allotments shall be 400.</p>	
Cameron Matthews/ #1048.15		Seek Amendment	I oppose the proposed Residential Heritage Areas. I think they shouldn't be Qualifying Matters and should all be removed from the plan, including, but not limited to, [Rule] 8.6.1 [Table 1 - Minimum net site area - Residential Zones].

Kāinga Ora – Homes and Communities / #834.118		Oppose	Delete Section 6.10A and all associated provisions.	
Kāinga Ora – Homes and Communities /834.118	Catholic Diocese of Christchurch/ #FS2044.83	Oppose	Delete Section 6.10A and all associated provisions. Kāinga Ora welcomes the Council's recognition of trees as a key element in successful urban environments. Kāinga Ora strongly support the Council increasing its prioritisation of the need to renew streetscapes, especially in areas where intensification has and will continue to occur. Such renewals should include kerb and channel replacement, undergrounding of overhead wires, and street tree planting. Kāinga Ora has substantial concerns with the 20% tree canopy cover target and considers it fundamentally unachievable in medium and high density environments on private land. Kāinga Ora consider the requirements to achieve 20% tree canopy cover is inconsistent with the spatial outcome requirements set out in the NPS-UD, and the Medium Density Residential Standard (MDRS) provisions of the Housing Supply Act. Kāinga Ora considers that the proposed financial contribution calculator is complicated and flawed, a simpler formula would be to require 1 tree to be planted per 100m ² of site area, as an easier compliance threshold than a trigger of 10% of future canopy cover. It also has concerns with the reliance on Financial Contributions. Given that Council already own extensive areas of park and open space land (including several thousand hectares of land on the Port Hills and Red Zone), in addition to extensive road reserve and local park areas, and given that Council takes Development Contributions for new parkland as part of any new development, the need for the land component to form part of the financial contributions appears to be particularly hard to justify. The need to provide rapid canopy cover potentially creates a perverse incentive to plant faster growing exotic species rather than natives. The proposed Financial Contribution could therefore result in a decline in biodiversity by driving developers to plant exotics over natives, with attendant adverse biodiversity outcomes, which is contrary of the desire in the Urban Forest Plan to seek diversity in tree species.	Support

Heritage New Zealand Pouhere Taonga (HNZPT) / #193.9		Support	Retain P1 [activity specific standard i] as proposed	
Canterbury / Westland Branch of Architectural Designers NZ/ #685.28		Seek Amendment	[Increase maximum depth and maximum volume[s] in Table 9]	
Canterbury / Westland Branch of Architectural Designers NZ/685.28	Anne Dingwall/ #FS2037.1132	Seek Amendment	[Increase maximum depth and maximum volume[s] in Table 9] The current earthworks rule limit of 20m ³ of volume or 600mm of depth creates unnecessary Resource Consent applications. The effect of this rule is that almost every project that includes a driveway requires a Resource Consent for earthworks; this is an unnecessary burden and cost. We recommend increasing the limits to a much higher level, or at least streamlining the process for these simple Resource Consents.	Support
Canterbury / Westland Branch of Architectural Designers NZ/685.28	Kāinga Ora/ #FS2082.372	Seek Amendment	[Increase maximum depth and maximum volume[s] in Table 9] The current earthworks rule limit of 20m ³ of volume or 600mm of depth creates unnecessary Resource Consent applications. The effect of this rule is that almost every project that includes a driveway requires a Resource Consent for earthworks; this is an unnecessary burden and cost. We recommend increasing the limits to a much higher level, or at least streamlining the process for these simple Resource Consents.	Oppose

Mitchell Coll/ #720.6		Seek Amendment	Seeks increasing the thresholds [earthworks volume and depth] limits to a much higher level or at least streamlining the process for these simple resource consents.	
Christchurch City Council/ #751.37		Seek Amendment	Change 8.9.2.1.P1 i as notified to read: Where Earthworks shall not occur within 5metres of a heritage item, or within the footprint of a heritage item which is otherwise subject to exemption 8.9.3.a.iv., or above the volumes contained in Table 9 within a heritage setting listed in Appendix 9.3.7.2, details of temporary protection measures to be put in place to mitigate potential physical effects on the heritage item must be provided to Council's Heritage team for comment at least 5 working days prior to the works commencing.	
Christchurch City Council/751.37	Anne Dingwall/ #FS2037.859	Seek Amendment	Change 8.9.2.1.P1 i as notified to read: Where Earthworks shall not occur within 5metres of a heritage item, or within the footprint of a heritage item which is otherwise subject to exemption 8.9.3.a.iv., or above the volumes contained in Table 9 within a heritage setting listed in Appendix 9.3.7.2, details of temporary protection measures to be put in place to mitigate potential physical effects on the heritage item must be provided to Council's Heritage team for comment at least 5 working days prior to the works commencing. The notified amendment to the activity standard for earthworks within 5 metres of a heritage item and cross-references in the exemptions for earthworks in building footprints and public parks and reserves are not worded consistently. The cross-reference to the activity standard in the public parks and reserves exemption inadvertently removes the exemption from other earthworks rules. The wording amendments consistently apply the proposed activity standard for temporary protection measures to all earthworks within 5 metres of a heritage item, including earthworks within building footprints and in public parks and reserves, which have similar potential effects on heritage values which need to be managed. The public parks and reserves exemption from other earthworks rules will continue to apply.	Support
New Zealand Institute of Architects Canterbury Branch/ #762.16		Seek Amendment	[Increase] the current restrictive maximum earthwork limits to a higher level that is reflective of the increased size of developments.	
New Zealand Institute of Architects Canterbury Branch/762.16	Anne Dingwall/ #FS2037.781	Seek Amendment	[Increase] the current restrictive maximum earthwork limits to a higher level that is reflective of the increased size of developments. This rule is easily triggered under the current restrictions, in particular for multi-unit developments. We ask council to update this rule, simplify and streamline the process regarding earthworks consents.	Support

Kāinga Ora – Homes and Communities / #834.132		Seek Amendment	Amend Table 9(d) so the maximum volume is 50m³250m³ [sic] / site net fill above existing ground level	
Kāinga Ora – Homes and Communities /834.132	Catholic Diocese of Christchurch/ #FS2044.93	Seek Amendment	Amend Table 9(d) so the maximum volume is 50m³250m³ [sic] / site net fill above existing ground level Earthworks are permitted through rule 8.9.2.31(P1), provided they comply with the volumes specified in Table 9. Table 9(d) in the Operative Plan limits earthworks to no more than 20m ³ in all residential zones. Whilst these volumes do not include earthworks associated with a Building Consent i.e foundation construction, they are invariably triggered through the formation of driveways and landscaping. In practice, a 20m ³ limit is frequently triggered for low density suburban development let alone medium density outcomes. As an example a standard driveway for a single dwelling is 4m wide by say 30m long = 120m ² . To build the driveway requires existing earth to be removed to a depth of 20cm, and then replaced with base course prior to being gravelled or asphalted. There is no change to existing ground levels. The cut is 24m ³ (120m ² x 0.2m depth), with fill being the same, resulting in 48m ³ . The rule threshold is considered to be unrealistically low, such that it generates numerous consents that are invariably granted. The key effects that need to be controlled with earthworks are erosion and sediment control during construction (although the scale of such works means that they are generally completed within a couple of days and therefore do not generate significant risks of sediment discharge), and permanent changes to finished ground levels that would result in overlooking of neighbouring properties i.e. forming raised mounds or terraces. It is therefore sought that the rule be amended so the volume is net fill above existing ground levels. It is noted that filling within Flood Management Areas is separately controlled in Chapter 5.	Support
Kāinga Ora – Homes and Communities /834.132	Carter Group Limited/ #FS2045.97	Seek Amendment	Amend Table 9(d) so the maximum volume is 50m³250m³ [sic] / site net fill above existing ground level Earthworks are permitted through rule 8.9.2.31(P1), provided they comply with the volumes specified in Table 9. Rob Seddon-Smith/1028.1	Susan Wall/ #FS2015.11	Seek Amendment	<p>Seeks an effective means whereby any property within a heritage area may be developed, within reasonable limits defined by the area, the cost of assessment to be borne by Council.</p> <p>An effective means whereby any property within a heritage area may be developed, within reasonable limits defined by the area, the cost of assessment to be borne by Council; and</p> <ul style="list-style-type: none"> - A clear definition of what constitutes the particular 'heritage' character of each area, so that it is easy to determine how any proposed development might meet such character standards - Lyttelton for example should not permit buildings to obstruct views of the water from the first floor or above of other properties. Standards need to be clear and if not clear, should not be imposed at all. - A date not more than 30 years hence whereby the heritage status of an area and the rules governing it should be reviewed or otherwise automatically removed; and - An effective means of compensating property owners deemed to be of heritage value for the additional expenses incurred in maintenance and any loss of value as a result of the designation <p>The matter of the preservation of heritage is complex. It both preserves the character of the areas included and stifles future development, effectively condemning the area therein to stagnation. Whilst we do not want to see wholesale destruction of the cityscape, neither do we need to have parts of it preserved as they are imagined to have been for all time. Ultimately the fear of the future is not a reason to retain all parts of the past. In assigning heritage status, there needs to be a good means whereby appropriate development can occur, without undue constraint, and in not assigning heritage status, the Effects On The Environment of otherwise apparently unconstrained development must also be considered. Heritage is seen as 'a good thing' but tends to be ill defined and very subjective, and whilst recognising the value in preserving a few outstanding examples of architecture, wholesale refusal to change is also foolish. For clarity, I do not own and do not intend to own property in any affected area. I have however seen the negative effects of such policies in the UK and know the difficulties they create for reasonable development. It is common to see heritage buildings fall into disrepair because they are too expensive to maintain and cannot be demolished. Such is the price of expecting the owner to do all the work of preserving a property for all. If Council thinks a property, tree or an area is</p>	Support

			of sufficient value to warrant protection for the benefit of all, the being for the benefit of all, the burden of cost should fall on all, not the few and Council should be prepared to fund proper management of the areas so that the amenity of living therein is not diminished.

Cameron Matthews/1048.23	Heritage New Zealand Pouhere Taonga/ #FS2051.53	Seek Amendment	Strike out all rules or parts of rules as they relate to Residential Heritage Areas, including, but not limited to, [Policy] 9.3.2.2.2 - Identification, assessment and scheduling of heritage areas. I oppose the proposed Residential Heritage Areas. I think they shouldn't be Qualifying Matters and should all be removed from the plan.	Oppose
Keri Whitiri/ #1069.2		Seek Amendment	Seek that the 'defining' and 'contributory' categories in Residential Heritage Areas are removed completely from the proposed new Policy Changes.	
Keri Whitiri/1069.2	Heritage New Zealand Pouhere Taonga/ #FS2051.54	Seek Amendment	<p>Seek that the 'defining' and 'contributory' categories in Residential Heritage Areas are removed completely from the proposed new Policy Changes.</p> <p>The Heritage Team of CCC have, yet again, sought to take advantage of their position and impose self-serving policy on owners of old houses in old suburbs.</p> <p>The proposed CCC Heritage Policy Changes 13 and 14 seek to not only sidestep the requirements of the National Policy Statement Urban Development by applying 'Qualifying Matters' to proposed new 'Residential Heritage Areas', they also seek to bring in categorisation of non-heritage listed properties by including them as 'contributory' or 'defining'. This new heritage categorisation effectively extends the pool of heritage properties that sit under the discretion and authority of the CCC Heritage Team, thereby further substantiating their own existence. This categorisation is unnecessary and contrary to the purpose of the NPS-UD.</p> <p>The fact that these 'contributory' or 'defining' properties are only shown in 'hard-copy' Policy Change documents, but not in online interactive digital maps, is highly misleading. It is an indicator of policy that has been poorly considered. It could result in a number of property owners not being aware of the effect the proposed Policy Changes might have on their non-listed property. Owners that this applies to have not been properly consulted, notified nor given the courtesy of actually knowing that their property is affected within PC13 and PC14, if they have relied on the interactive digital maps to inform them.</p> <p>There is little indication of the difference between the proposed new 'Residential Heritage Areas' and existing 'Residential Character Areas'. Nor is there clear information of the purpose of the new moniker and the actual regulatory requirements that all property owners within it will be subject to. The purpose and effects of PC13 and PC14 have been poorly communicated.</p>	Oppose

			<p>Furthermore, the elevation of colonial heritage values in this day and age comes from a position of privilege and bias. It undermines the intended bicultural roots of NZ society and perpetuates one ideological system that has been enshrined in physical fabric, over intangible values that have been subjugated and erased over the past 170 years.</p> <p>The NPS-UD 2020 serves a particular purpose - it is to secure sufficient development capacity for new housing. This is to counteract the housing crisis and open up opportunity for more people to have the benefit of living close to urban amenities, making 'good' areas for living more accessible to a larger part of society.</p> <p>One could argue that in perpetuating the notion of 'Residential Heritage Areas' based on colonial heritage values that a Local Government Authority is limiting opportunities for future expression with building stock that departs from the colonial status quo. The idea that existing Heritage Items are subject to current restrictions, regulatory requirements and protections is valid. The notion that new categorisations of 'contributory' and 'defining' properties is an appropriate response to the NPS-UD is not valid. The purpose of the wording change from 'Residential Character Area' to 'Residential Heritage Area' is unclear. One would hope that the proposed Policy Changes were a useful step in tipping the balance of housing affordability (an aspiration that is increasingly beyond the grasp of most young NZers) as opposed to protecting the privilege of older generations.</p> <p>By applying 'Qualifying Matters' to proposed new 'Residential Heritage Areas' CCC subverts a National Policy that is aimed at greater access to housing stock and proposes changes that seem to effectively increase colonial heritage protection and restrictions on development. This is in conflict with the intention of the National Policy Statement Urban Development 2020.</p>	
Keri Whaitiri/ #1069.3		Seek Amendment	Seeks that the full implications of the new 'Residential Heritage Areas' are disclosed and that these do not exceed the current provisions of the 'Residential Character Areas'.

Melissa Macfarlane/ #1003.12		Seek Amendment	Delete references to heritage areas in Policy 9.3.2.2.5. If required, instead include a new fit for purpose targeted policy for residential heritage areas that focuses on impacts on the recognised values of the area, i.e. interwar Californian bungalow	
Melissa Macfarlane/1003.12	Heritage New Zealand Pouhere Taonga/ #FS2051.60	Seek Amendment	Delete references to heritage areas in Policy 9.3.2.2.5. If required, instead include a new fit for purpose targeted policy for residential heritage areas that focuses on impacts on the recognised values of the area, i.e. interwar Californian bungalow. The proposed changes appear to bring residential heritage areas into existing policies covering the management, ongoing use and demolition of historic heritage. These policies include specific direction for works on heritage items and generally severely limit these. The policies make sense when applied to individually listed items with specific and important heritage fabric. However, the level of specificity and restrictions are onerous for buildings included by virtue of being within a wider heritage area as they are interwar Californian bungalows. If a policy is required for residential heritage areas, then it should be targeted to impacts on the values of the area, i.e. impacts on the heritage value of interwar Californian bungalows, rather than the values of the individual building and setting.	Oppose

Melissa Macfarlane/ #1003.13		Seek Amendment	Delete references to heritage areas in Policy 9.3.2.2.8. If required, instead include a new fit for purpose targeted policy for residential heritage areas that focuses on impacts on the recognised values of the area, i.e. interwar Californian bungalow	
Melissa Macfarlane/1003.13	Heritage New Zealand Pouhere Taonga/ #FS2051.67	Seek Amendment	Delete references to heritage areas in Policy 9.3.2.2.8. If required, instead include a new fit for purpose targeted policy for residential heritage areas that focuses on impacts on the recognised values of the area, i.e. interwar Californian bungalow. The proposed changes appear to bring residential heritage areas into existing policies covering the management, ongoing use and demolition of historic heritage. These policies include specific direction for works on heritage items and generally severely limit these. The policies make sense when applied to individually listed items with specific and important heritage fabric. However, the level of specificity and restrictions are onerous for buildings included by virtue of being within a wider heritage area as they are interwar Californian bungalows. If a policy is required for residential heritage areas, then it should be targeted to impacts on the values of the area, i.e. impacts on the heritage value of interwar Californian bungalows, rather than the values of the individual building and setting. Property Council New Zealand/ #242.21		Support	[Support] intention of introducing resource consent requirements as a restricted discretionary activity to help protect Character Areas. However, given the scale of the proposal and introduction of 11 new residential heritage areas, we wish to highlight the importance of ensuring that Christchurch has sufficient development capacity. This can be achieved through enabling and encouraging greater height and density within high density zone precincts, town centres and metropolitan centres.	
Property Council New Zealand/242.21	Heritage New Zealand Pouhere Taonga/ #FS2051.68	Support	[Support] intention of introducing resource consent requirements as a restricted discretionary activity to help protect Character Areas. However, given the scale of the proposal and introduction of 11 new residential heritage areas, we wish to highlight the importance of ensuring that Christchurch has sufficient development capacity. This can be achieved through enabling and encouraging greater height and density within high density zone precincts, town centres and metropolitan centres. The Council proposes introducing a resource consent requirement as a restricted discretionary activity to help protect Character Areas. The previous draft plan saw the addition of 65 heritage buildings, so we are glad to see this has dropped to 44 buildings post notification. We believe that it is important to effectively balance the preservation of special character with unlocking additional development capacity for Christchurch. It is crucial that Christchurch preserves heritage where appropriate, but also enable development to meet future housing needs.	Support

Historic Places Canterbury/ #835.19		Seek Amendment	The submitter supports the proposed simplification and clarification of the rules for heritage to help make them more workable, effective and easily understood. However, the submitter is concerned that the rules around consent to demolish contain no acknowledgement of the waste generated through demolition, or the carbon retention benefits of embodied energy within buildings. It is the submitter's contention that the carbon impact of granting a demolition consent needs to be factored into the decision making process and that the rules should be amended accordingly. Owners should also be required to provide information on the cost of demolition to allow a fairer assessment of the cost to them of retaining a listed building.	
Historic Places Canterbury/835.19	Anne Dingwall/ #FS2037.606	Seek Amendment	The submitter supports the proposed simplification and clarification of the rules for heritage to help make them more workable, effective and easily understood. However, the submitter is concerned that the rules around consent to demolish contain no acknowledgement of the waste generated through demolition, or the carbon retention benefits of embodied energy within buildings. Memories of place are important for a sense of belonging and community.</p> <p>Actively discouraging developers who do not value heritage buildings by requiring them to do additional assessment before demolition consent is granted (irrespective of a buildings heritage status), will create opportunities for other buyers to develop and restore these buildings in a way that respects their heritage values.</p> <p>Often it is only a marginal decision whether a building can be saved or demolished and encouraging development of later (and now often dilapidated) 'tract' or 'housing company' 1950s and 60s homes sitting on large sites but still within close proximity of suburban centres is a better outcome for the city.</p> <p>High quality houses with heritage value often sit on slightly larger sections which in a rapidly rising market through late 2020 to early 2022, led to decisions to demolish being made purely on the economics at that moment in time, rather than on the long view of the intrinsic value that a heritage building may have.</p> <p>As these are irreversible losses, and the value of workmanship on these buildings generally well exceeds the current market value of the improvements, real care is needed to ensure potential value for future generations is not being discarded on the basis artificial economics.</p> <p>Artificially constraining zonings outside areas of pre 1940 homes while liberalising zoning in areas containing significant numbers of pre 1940 homes, creates artificial economic rationale for heritage demolition.</p> <p>The solutions for the city should also be read in context of my submission on PC14.</p>	
Anne Dingwall/ #1089.9		Seek Amendment	Amend Assessment Criteria for the demolition of Heritage Buildings to include an energy consumption and emissions 'whole of life' audit be undertaken for building projects to establish costs to the environment of energy consumption and CO2 emissions	
Anne Dingwall/1089.9	Anne Dingwall/ #FS2037.660	Seek Amendment	<p>Amend Assessment Criteria for the demolition of Heritage Buildings to include an energy consumption and emissions 'whole of life' audit be undertaken for building projects to establish costs to the environment of energy consumption and CO2 emissions</p> <p>In 2022 CCT and HPC contested a resource consent application by Canterbury Jockey Club for demolition of the Grand National Stand at Riccarton Park. Many ideas for adaptive reuse were offered. However, in our view, the Commissioner (and Council Heritage staff) placed undue emphasis on just one of five heritage criteria: 'iii. whether the costs to retain the heritage item (particularly as a result of damage) would be unreasonable.'</p> <p>In fact, the costs to repair damage were relatively modest. The high seismic strengthening costs which were cited by the applicant were by far the major 'problem'. No consideration at all was given to the effects of demolition on the wider environment and climate change (global heating).²</p> <p>CCT considers it imperative that an energy consumption and emissions 'whole of life' audit be undertaken for building projects to establish costs to the environment of energy consumption and CO2 emissions. Such audits should automatically accompany claimed QR costs of new buildings; and demolition costs should be included in an assessment of the financial costs of any project. In the GNS case, CCT and HPC had to request that such a figure be provided. An 'estimate' only of the cost of demolition was eventually provided by the applicant</p>	Support

Anne Dingwall/ #1089.10		Seek Amendment	Amend Assessment Criteria for building beside heritage items such as Hagley Park	
Anne Dingwall/1089.10	Anne Dingwall/ #FS2037.661	Seek Amendment	<p>Amend Assessment Criteria for building beside heritage items such as Hagley Park The encroachment on HP values by the 2021 Resource Consent for the Ryman Healthcare development on Park Tce and adjacent streets was of considerable concern to CCT, ICON and others. Objections were made to the exceedance of height limits of buildings facing HP. Such concerns continue, despite there being no sign of building on that site. CCT urges that height exceedances, which in this case were allowed in the extreme by the Commissioners under the operative CDP, do not occur under PC 14 with the potential for deleterious outcomes also impacting on PC 13 Heritage. Given the significance of the Government-imposed building height increases, there must be no room for further height creep.
